1. Motorola MaxTrac 300, 16 channel UHF mobile radio, doesn't scan, some of the speaker grille broken off. Has a heavy duty black Moto. mic and mic clip. Includes a Larson trunk mount antenna. Never been installed in a government vehicle in Hamiltion County so that means there's no coke or coffee been spilled in it. I can't find the mounting bracket I had for it but you can use any generic adjustable bracket. $150.00
There's a bad pic at http://www.geocities/com/brianzz423/mobile.jpg

2. Motorola MT1000 16 channel portable UHF radio. Only thing wrong with this is the battery is a different color from the radio because GT didn't have my color, battery is only about 6 months old. And a standard desktop charger.When I had it programmed it was registered to Narcotics division of a local police department so there's no telling where or who it's been in. Also a public safety mic (the one with the little antenna on it like all the police have) comes with it. It's showing some signs of wear and tear, the connectors are chipping a little. And I have a swivel basketweave Uncle Mikes universial radio carrier to go with it. It's also $150.00

Or if you want both of them you can have them both for $250.00

email me if you want it

1705. Digital Television

Yahoo group: chattradio
Date: 2002-11-07 08:52:47 UTC
From: Matthew Sadler
Topic: 1705 Message: 1705

Thought I'd let the group know about digital television, and its status in Chattanooga and such (and FWIW, I am biased towards WTVC, I work there).

All of the "big three" now have digital transmitters on the air. WRCB and WDEF are (I believe) running 24/7, but most of their programming is upconverted. Upconverted programming is where the analog signal is merely converted to digital and sent out over the air. There is a minor difference in signal quality, but not much. At WTVC, we are running our digital transmitter only between 8 PM and 11 PM, since there is no high definition programming available from ABC at the other times - so what's the point?

ABC is providing a lot of their prime-time sitcoms in high definition, and the difference between the analog signals you're used to and the high definition are simply amazing. The pictures are dramatically sharper, they are in a different aspect ratio (width to height of the picture) more similar to a movie theater, and elements in the background retain much more detail. HDTV also offers 5.1 Dolby digital audio, which provides a much better surround sound experience. Another nice feature is that instead of running one channel on the channel, we can run multiple channels ("virtual" channels), so instead of tuning to channel 35, you would tune to 35-1 or 35-2. During the election Tuesday evening, we were running ABC's HDTV programming on 35-1 and continuously updating election returns on 35-2. No annoying squeezebacks or crawls necessary (except for that EAS required monthly test I had to run) to keep the viewers informed on the election returns! I've seen some HD programming on WDEF, but not sure how much they or WRCB offer.

If you've seen DVDs, they don't hold a candle to high-definition. No contest at all. True HDTV is the wave of the future, and once the prices come down it'll really be worth your while to invest in one.

Channel assignments for digital TV stations that are on-the-air:
13: WRCB-DT
35: WTVC-DT
47: WDEF-DT

Other DTV channel assignments are available on the ScanChattanooga web page at http://www.scanchattanooga.com/broadcast/tv.html .

Of course, digital radio has also been approved, but it will use a scheme where the digital signal can be transmitted on the existing channel (both for AM and FM), so no replacement channel will be needed like with digital TV. Think of it like the transition from black and white to color TV - your black and white set continued to work, but to get the color broadcast, you needed a color set.

Anyway, that's a current status report of sorts. Questions? Feel free to ask.

From: Sam Hall
Topic: 1705 Message: 1706

Great information - Thanks!

Here's a question you might be able to help answer for me.
I receive TV via satellite and locals via antenna. WRCB and WTVC both have stunningly clear signals that blow cable and satellite signals away in terms of quality. I don't have a digital or HDTV receiver (yet). Now for the question...
WDEF's signal has always been less than perfect. This is due in part to my location (Dallas Bay area), but something else is going on that I suspect is introduced by their digital signal. The noise in the picture now has a different look to it, like elongated vertical bars of interferance.
Something like this:

This is only introduced at the Tivo level (yes, I have a Tivo and love it). What is strange is that the change in noise appearance only happened after their digital upgrade. Could the digital signal be affecting the way noise is handled by MPEG compression? Again, no problems with WRCB or WTVC...in fact, WTVC looks even better now.

Ok, I'll stop rambling now.

From: Matthew Sadler
Topic: 1705 Message: 1708

Probably has a lot to do with WRCB-DT going on the air on channel 13...

Originally, WRCB-DT was assigned to channel 55. Problem is that 55 is considered a "non-core" assignment, meaning that once the whole analog to digital transition is over and everyone discontinues transmitting an analog signal, that channel is part of the spectrum that will be re-allocated for two-way services, so they would have to move. They petitioned the FCC (successfully) to move to channel 13. WDEF filed against it, claiming (correctly, it appears) that it would create significant interference in the Chattanooga area, but the FCC said that there were no rules or reasons to expect interference from the DTV station being on an adjacent channel.

Go figure. These are the same morons that won't let you put analog TV stations on adjacent channels, but an analog and a digital? No problem!

FWIW, the July ratings had two listings for WDEF: one for the time period before WRCB-DT went on the air, and another for the time period after they went on the air.

I think while we were on low power and the new tower was going up, our engineering staff did some work on the transmitter. Not sure, though. I do know that for the most part, everything we use for WTVC-TV is digital equipment. Not high-definition, but digital. There is a difference, which unfortunately the equipment manufacturers and electronics stores seem to be blurring.

1711. Re: Bradley County EMS

Yahoo group: chattradio
Date: 2002-11-08 05:49:00 UTC
From: Richard L. Elliston
Topic: 1694 Message: 1711

Matthew:
Thanks for this useful information. I had noticed that BCEMS was no longer using 154.205 MHz. Considering the funding that's available to government agencies in Bradley County, I had assumed that they had switched to carrier pigeons, smoke signals, drums or some other ultra modern form of wireless communications.

Looks like this frequency is licensed to Eaves Electronics, which, according to trunkedradio.net, has a trunked VHF system operating in this area. Does this mean that it's likely that BCEMS will eventually have a talkgroup within a trunked system?

I think that was the annual drill sponsored by the LEPC (Local Emergency Planning Committee) that was at the JIT or JAT? terminal on Manufacturers Rd They have a website link under Hamilton County EMS and the Chatt Fire Department had a link to them as well if any would like to check them out.

Thanks for the heads-up. I just moved here, never saw these episodes before ... or didn't pay attention.

You know if Chattanooga's on just today, or will there be more Chattanooga episodes later on?

Thanks,
Jay

From: Mark McDougal
Topic: 1728 Message: 1729

Jim,
I can't answer as to 21712. 19856 is part of the Hamilton County Fire talk groups, here is a list of those talk groups.

19856 County Wide Dispatch
19888 East Dispatch
19920 West Dispatch
19952 Fireground 5
19984 Fireground 6
20016 Fireground 7
20048 Fireground 8

All of the departments in the county where given a portable with these TG's in them, I know for shure that some have more than one that they have bought. I assume that in the future all dispatch will be over the main frequency, but I bet they will simulcast on the VHF frequencies for the pagers. As you can see they use FG5-8 to follow CFD's FG1-4.

Matthew,

I'm curious whether you were using a 780 - or another scanner - for this reception. If you have a local agency on 155.700 or 155.685 MHz., how well is the scanner handling selectivity?

Thanks,

Jeff Multer

Haven't actually monitored this one yet; it turned up in a search of FCC records.

Personally, I use a Uniden BC780XLT, and always, whenever possible, enable tone squelch - not just to battle co-channel interference (multiple users on the same frequency), but also intermod from the pagers as well as adjacent channel interference, which can sometimes be a problem. The best example of co-channel interference I get here in Chattanooga (using an 800 MHz antenna, no less) is between Cumberland County, TN Sheriff and Chattooga County, GA Sheriff (and Cumberland County wins, if Chattooga is transmitting and Cumberland comes up, Chattooga just goes completely silent).

I know on UHF, there is a trunking system control channel that works on 461.4875, and the cable TV company has a repeater on 461.475, there is occasionally a bit of interference but not much at all, and enabling the tone squelch on the 461.475 solves these problems entirely.

1735. 155.235 Agencies

Yahoo group: chattradio
Date: 2002-12-06 19:58:25 UTC
From: Larry Van Horn
Topic: 1735 Message: 1735

This has been bugging me for three days now. I am chasing several agencies on 155.235 and I need some help.

Two of the agencies I have resolved and confirmed their presence o this one:

GA WZX907 Gilmer County Ambulance Service simplex ? Ellijay (103.5 tone)
NC WPEW245 Angel Community Hospital voice paging?Franklin (136.5 tone)

But I may have at least two or more agencies here that a giving me fits.

My main player I am interested in IDing appears to be in the EST time zone (based on time checks). They are an apparent EMS dispatcher (today we have had a female dispatcher all day) with lots of calls to Medic 1. From here in Brasstown they appear to be NNW to N of my location. They are simplex and I am seeing a 203.5 Hz PL tone.

Does anyone know what Roane County or LaFollette are using on this freq?

I have also heard an unid law enforcement agency here that I have no further on.

I have also heard a CW ID here, but have only caught the last two digits (.....63). That is the disadvantage to answering a phone all day. Gets in the way of scanner listening. ;-)

Finally, I have another unid agency with a PL tone of 114.8 Hz. Nothing further on them.

Any help from folks in and around Knoxville and areas to our west is much appreciated.

73 and good hunting,

Just on additional item on my TN EMS 155.235 (203.5 PL tone) dispatcher. They have made several mentions of I assume the UT Knoxville Lifestar helos being available on some of their dispatches. With the northerly beam heading, that would indicate further I am dealing with an EMS agency services by Lifestar.

Larry,

Roane County (TN) EMS is using 155.235 MHz, simplex, with a 203.5 Hz PL.
They are also using two discrete frequencies in UHF as a control link from
their dispatch center.

An application is pending before the FCC to make this a repeater output, the
input would be 150.805 MHz.

From: tosborne37914 <tgo1@aol.com>
Topic: 1743 Message: 1743

Does anyone in this group monitor this system? The Armuchee RD is HQ at LaFayette and are supposed to have a repeater on John's Tower, so some activity should be audible from Chattanooga. The old pair was 168.175/168.775, but, in view of changes in nearby NF's, I rather doubt it is still used. The decode tone is 136.5 (know that much). I have been mapping each RD and repeater but don't really know where on the dial to start listening. THANKS!

I used to monitor this channel and occasionally I would hear something. I
have not monitored it in a while because there wasn't ever anything to listen
to on it. Don't know if this helps.

Green light bar, and I'm not really sure it even had any radios in the
car. I don't believe there are any constables in Hamilton County.

From: Dalamar the Dark <br_dalamar_br@yahoo.co
Topic: 1749 Message: 1752

The company is called Security Wise. Their office is on Brainerd Rd. I have a friend who works for them. They only have one car (driven only by the owner) and one radio operating on simplex (no repeater). This may change as the company grows but as of right now, I wouldn't expect too much traffic from that one radio.

Anyways, I will get the frequency from my friend and post it for you soon.

By the way, does anyone have the frequency for Tri-State Secuity and Detective Agency? The office is on Mack Smith Rd. in East Ridge. They only have 3 "roving" vehicles with radios in Chattanooga but have quite a few in Cleveland. The company has its own repeater but is using its allocated frequency without license. Therefore, searching the FCC's database is useless. Any help would be greatly appreciated as I am new to the group but am full of helpful knowledge.

Thanks.

Yes, Roane Co. does operate on this frequency under KEC485 for medical purposes but that is about all I know at this point. I am spending this next week at my brother's in Roane Co. I should know more (ie. exact use and PL tone, etc.) when I return.

I have Tri-States repeater in one of my radios but I'm not sure which channel.. you can try these... some of them might be Butch Johnson's old frequencies

463.975 127.3

464.725 82.5

All I've heard on the Tri State channel lately is the CW transmitting every once in awhile.. but I work days now and most of their traffic is at night.

Does anyone know where Butch Johnson moved his radio traffic to? I sorta miss those constant traffic reports.

Oh yeah I forgot to add.. I couldn't imagine Bill Roach operating a repeater illegally (sarcasm)...

Might want to try to search the FCC for Bill Roach or Charlie Ledbetter... no telling who's name it's in. Might come to find out it's in some guy that's been dead for years.

1757. Last PRO-2067??

Yahoo group: chattradio
Date: 2002-12-28 01:42:31 UTC
From: Jonathan Guy
Topic: 1757 Message: 1757

The Pro-2067 is on sale at Radio Shack for 149.99 (not clearanced, or it would be 149.97). These radios originally debuted for almost $500...my how prices drop!

I found the last 2 in the district at the Northgate store tonight. They now have one left. :) The 2067 is the mobile version of the Pro-92...both have instant tone decode which is all I use mine for. They are TERRIBLE trunk trackers but have a good UHF/VHF receiver with PL/DPL decode.

1760. Re: Studio-Transmitter Link

Yahoo group: chattradio
Date: 2002-12-30 00:34:46 UTC
From: Matthew Sadler <mws@kf4lhp.net>
Topic: 1758 Message: 1760

They are used by radio and TV stations to transmit their programming from their studios to the transmitter site, which are usually separate. Landline facilities were either not available in the past, weren't reliable enough, or were simply too expensive so microwave was used.

Radio stations normally use frequencies around 950 MHz; TV stations usually around 6.8 to 7 GHz.

At WGCL in Atlanta we have both, fiber transmission and a microwave link as a backup to transmit our studio/network signals to the transmitter site 5 miles away. In Atlanta, cut phone lines are an everyday occurrence.

462.950 - Hinch Mountain
463.000 - Dispatch and Information
463.050 - Signal Mountain

These are the frequencies and assignments that I have. Not sure if they are
still current.

The 463.000 repeater is located on top of Erlanger's facility on East 3rd Street in Chattanooga. Outside of the immediate Chattanooga area, you probably won't be able to hear it.

The helicopters are also equipped with VHF AM aviation band radios and can occasionally be heard talking to Lovell Field tower (118.300 MHz), as well as multi-band Wolfsburg FM radios that have presets in the memory for most of the agencies that they fly to for patient pick-ups. If the agency is not in the radio, they will often use State EMS (155.205) or fire mutual aid (154.280) to communicate with the LZ.

1773. More emergency radio frequencies tested

Yahoo group: chattradio
Date: 2003-01-09 19:59:15 UTC
From: wd5bxv <wd5bxv@yahoo.com>
Topic: 1773 Message: 1773

http://tinyurl.com/49kl

Source: The Daily Post-Athenian
01-09-2003

Among the issues arising from the debate over a consolidated 911 system, the problem of heavy radio traffic on the single countywide frequency could become a thing of the past.

"This could be the best thing that's happened to law enforcement communications in McMinn County in 20 years," said Athens Police Chief Chuck Ziegler, who also heads the Communications Department currently operating the 911 system used by the county and all its municipalities except Etowah.

The Communications Department has begun testing a new, additional frequency onto which all of the Athens Police Department's radio traffic has been moved from the Sheriff's Department network.

"During the meeting between Athens officials and 911 board officials earlier (in December), the city was given information that there was a repeater-capable frequency available from an area businessman," Ziegler said.

"The frequency is in the same frequency range as the current Athens radio communications equipment."

Ziegler said city officials contacted the frequency owner and arranged for the Athens Police Department to test the frequency as a possible alternative channel for Athens police radio traffic.

Moving all APD radio traffic to another frequency cuts almost in half the load on the sheriff's network, the frequency shared by law enforcement in McMinn County, Athens, Niota, Englewood and Calhoun, Ziegler said.

"That's been an ongoing issue; the problem of overcrowding on the one frequency," he said.

Ziegler said the overcrowding issue has been one of his main concerns when considering adding another municipality to the already packed frequency.

"Basically, we were able to develop a test procedure last week that allows us to utilize this frequency with some borrowed equipment to test for a short period of time," he said.

Ziegler said the test period will continue for the next two weeks.

So far, the results have been a resounding success, he said.

McMinn County Sheriff's Department Chief Deputy Tim Smith noted he believed communications has already improved.

"After the initial test we ran the new frequency to the control panels so dispatchers would be able to use the new frequency just as they do for the sheriff's frequency," Ziegler said.

"All of APD's radio traffic was transferred to the new frequency for the test period over the weekend," he said.

Ziegler said the coverage and service so far has been "equal to the service we're accustomed to over the past couple of years."

He said the new frequency looks promising.

"We're very pleased that the tests indicate that this is a compatible system to the equipment and service we've been using," he said.

If further testing results are positive, Ziegler said a recommendation would be made to City Manager Mitch Moore and to the City Council on how officials will proceed and make use of the new frequency in the future.

"This has been one of my major concerns in the consolidation issue," Ziegler said. "The overcrowding issue has been more of a concern for me than anything else.

"It's caused a lot of friction between all the departments trying to use the one frequency," he continued. "A change such as this ☐ allowing the two major departments to have their own frequencies ☐ would be a major advantage to the citizens."

Ziegler said everyone using the frequency or feeling the effects of reduced traffic on the sheriff's network has been pleased.

"After the first few days of testing, it seems to be a success," he said.

A lease arrangement could be in the works for use of the frequency, but Ziegler said he couldn't elaborate on any talks with the frequency owner yet.

While I don't know what frequency it is, my guesses would be any of the
following:

150.965
151.535
152.315
152.345
152.375
152.915
153.065
153.500
153.605
153.635

If anyone finds them, let me know and I'll update the information
appropriately on ScanChattanooga.com

1777. New Athens PD Test Frequency - 152.315 with a 136.5 PL

Yahoo group: chattradio
Date: 2003-01-10 02:46:28 UTC
From: wd5bxv <wd5bxv@yahoo.com>
Topic: 1777 Message: 1777

Looks like it is 152.315 with a 136.5 PL.

Not sure of the input.
It is not in the 10 listed.

Will still report back tomorrow on what I hear on the other 9
channels.

Larry...

1778. Re: New Athens PD Test Frequency - 152.315 with a 136.5 PL

Topic: 1777 Message: 1778

I can't confirm this hunch at the moment because the FCC database isn't working, but I bet we'll find that this frequency belongs to the same person/company as the frequency currently used by Bradley County EMS.

1779. Hits on Matthew's Frequencies Overnight

Yahoo group: chattradio
Date: 2003-01-10 17:21:44 UTC
From: wd5bxv <wd5bxv@yahoo.com>
Topic: 1779 Message: 1779

```
Freq Tone Hits Air Time
152.315 136.5 299 000:48:27 - Athens PD Primary
153.065 85 000:15:35
153.065 146.2 64 000:16:05
153.605 53 000:02:58
153.635 50 000:04:52
152.345 123.0 48 000:13:22
152.915 123.0 37 000:07:36
152.375 25 000:02:04
153.605 151.4 10 000:01:25
153.065 79.7 6 000:01:07
152.375 241.8 4 000:01:23
152.375 118.8 2 000:00:12
150.965 156.7 1 000:00:10

152.345 & 152.915 CW-ID at the same time with the same PL.
Appears to be mobile telephone.
Most the others are just ID's for the hit count.
```

1780. Re: Hits on Matthew's Frequencies Overnight

From: Carr Fred
Topic: 1781 Message: 1782

154.055 is repeater output
158.880 is repeater input.....

Repeater is located at Incline on top of Lkt Mtn

All 258 school buses are equipped with this frequency.....my call number is 250 on this channel.....(two five oh)

KRJ-784 is the call sign for the repeater.

Fred Carr

1783. Radio Shack Pro-93/2053 *FYI*

Yahoo group: chattradio
Date: 2003-01-15 07:05:39 UTC
From: Jonathan Guy
Topic: 1783 Message: 1783

The Radio Shack Pro-2053 (cat. 20-466) is now in close-out status. The new price is $116.97, if you can still find one in this area. The Pro-93 (cat. 20-523) is in close-out status for $129.97. Both are in very limited quantities around town.

The 93 is a 300 memory, alpha-tag capable, trunk-tracking handheld scanner.

The 2053 is the desktop version of the 93.

If you've thought about adding another trunktracker to your listening post, I'd recommed either of these for the price. Both the handheld and the desktop are "control channel only" trunk-trackers and have the capability of 100 talkgroups per bank. They're both reasonably sensative, and the worst interferance arrives when located too close to the computer/monitor, but that's a problem common to most scanners.

The -ONLY- real problem I have with either unit is a problem that all the G.R.E. made trunk-trackers (Pro-92/2067 - Pro-93/2053 - Pro-95) suffer from. You cannot manually step to a talkgroup. While scanning, you have to wait for the desired talkgroup to become active, press and hold the "TRUNK" key until "ID Hold is on" pops up in the display. They both seem to hold on the selected talkgroup fairly well, much better than the 92/2067.

I saw this on tv tonight. It's a very slick computer system that incorporates and controls all of the individual devices in a police cruiser- even the radar unit. It features voice activation, touch screen, and a heads-up display so the officer never has to take his eyes off the road or a car he's pulled over.

Topic: 1793 Message: 1793

Several years ago I retired my Bearcat 200XLT when I purchased a Pro91. I have since purchased a Pro 94A and a Pro92B. A couple of weeks ago, I purchased a pair of cordless phone battery packs and used them to replace the nicads in the Bearcat 200XLT power pack. I was pleasantly surprised. I had forgotten how well this old friend performed! Although I have been pleased with the performance of each of the three trunkers, none of them compares to the sensitivity of the old Bearcat 200XLT. Has anyone else made a similar comparison?

1796. TN Wildlife APCO P-25 Compliant

Yahoo group: chattradio
Date: 2003-01-22 16:09:41 UTC
From: Larry Van Horn
Topic: 1796 Message: 1796

We do have an APCO P-25 system in our area. I have a BC-250D w/card setup here in the office checking out the frequencies with digital signals I have monitored in the past. The Tennessee Wildlife repeater on 159.240 (ro) is in fact a MOT Astro APCO P-25 compliant conventional system and the card works beautifully. I hear units talking here to Crossville.

It would appear the TVA 168.225/171.750 system will remain dark. Not sure what type of system I have hear on this repeater pair.

More as I work through my local freq list. I hope to put an update on our website soon.

73 all and good DX.

Larry & group:-
The TWRA VHF system is indeed digital, but I'm not sure about the P25 aspect. I am monitoring them with a Motorola ASTRO radio which does not have the P25 upgrade. Motorola has a propriety digital format which I believe is called VSELP. The transmissions are as clear as digital will allow. Will look for more information.

1801. RE: [chattradio] Re: TN Wildlife APCO P-25 Compliant

Yahoo group: chattradio
Date: 2003-01-27 15:24:50 UTC
From: Larry Van Horn
Topic: 1796 Message: 1801

Trust me Thad they are P-25 compliant. I am hearing them with the digital on using a BC-250D with P-25 board and they are coming through loud and clear on both of the repeaters I can hear here in B-town. This is the first time in years since they went digital I have been able to hear anything here other than the digi stream. So mark up the TWRA VHF system as APCO P-25 compliant.

Have fun all and good hunting,

Larry:
Thanks for the heads up as far as TWRA and P-25. I'll put the TVApair into my radio and see what this is. I need to learn a bit about the new digital systems to better understand them. I think Moto has some good basic pubs on them.
159.240 is the dispatch channel for Region III, which is HQ in Crossville, but includes SE Tenn. Up in my neck of the woods, we are in Reg IV which just moved into new HQ in Morristown.

Thad

I just wanted to mention to the list that we have a source for the 250 and 785 in the Chattanooga area. Our local amateur radio dealer, C.T. Morgan & Associates has a limited supply of these new radios and digital cards. Their phone number is 629-7911, they're located at 2300 E. 34th St.

BC250D - $359 - Handheld scanner
BC785D - $359 - Base/Mobile scanner
BCi25D - $325 - Digital Card

The shipment arrived this afternoon.

Now while we aren't an easy drive down the block for most of you we do consider ourselves an area radio dealer for Chattanooga as well Jonathan. The only local list I support is the Chatt list and we have done several events including the Chatt Hamfest in the past.

We also have the 785/250s at $369.95 and the cards at $309.95 in stock ready to ship right now (as well as many other toys in stock). If you pick up, we do have to charge NC state tax and if we deliver its one day, $12.95 and no tax. Plus if you do stop buy we have that world famous Grove hospitality to offer, coffee and a tour, a great drive through the mountains, fresh air, no pollution, a free copy of MT and maybe the opportunity to hear some Eric Robert Rudolph comms. ;-) Gee what a country!

So please don't forget your other Chatt area radio dealer and if we can be of any help feel free to call me here in the office. Sorry for the shameless plug; it might say NC on the address, but we do love the great radio hobbyist in the Chattanooga area, many of whom I consider close friends.

My apologies Sir, I did not mean to leave you out! While not our "downtown" store, Grove certainly is our "suburban" store, a nice drive through the gorge!

I got to play with the 785 a little last night, I like it so far...a little different than the 780, but not much. A review will be posted later.

You speak the truth, Larry ! Around 1990, I drove from Charlotte to
Brasstown to pick up a Uniden 760 (still have it). Grove Ent was
still in the building behind Bob's house. Beautiful country,
everyone was very nice.

I wish I had seen an ATM machine a little closer to Brasstown,
though, because Bob had a 2-meter handheld for sale that I would have
bought on-the-spot, if I had more cash with me.

The trip took most of the day, and I still remember it fondly. At
the same time, it makes me appreciate the times Rachel and other MT /
Grove people have come to Charlotte for our hamfest (which is in a
couple of weeks).

I thank all of you at MT / Grove Ent for your support of the various
radio hobbies.

From: Richard L. Elliston <elliston@ix.netcom.
Topic: 1817 Message: 1818

AMA always arises when the patient has declined treatment or transport to hospital, so I assume that it means "advised medical attention."
Occasionally, you'll hear a less experienced dispatcher say "no stolen reported," instead of "NSR."

AMA means Against Medical Advice - the patient refused treatment that the medic advised was needed. NSR means No Stolen Report - the car or plate is not reported stolen.

From: Larry Van Horn
Topic: 1779 Message: 1820

Hey folks,

Sorry it has taken me this ling to respond to the message below but I had to do some work that pays the bills. ;-) I have been doing quite a bit of analysis on this Jon D. Eaves & company. Here are the business repeaters I have heard from here in B-town so far operated by this company.

Eaves Electronics
43.180/49.180 IK Repeater [Benton, Polk Co]
150.965/157.635 IB Repeater [Benton, Polk Co]
151.535/159.885 (123.0 Hz) IB Repeater [Benton, Polk Co]
152.315/157.575 (123.0 Hz) IB Repeater [Benton, Polk Co]
152.345/157.605 (123.0 Hz) IB Repeater [McDonald, Bradley Co]
152.375/160.035 (77.0 Hz) IB Repeater [Benton, Polk Co]
152.435//157.695 (136.5 Hz) IB Repeater [Athens, McMinn Co]
152.915/160.095 (123.0 Hz) IB Repeater [Benton, Polk Co]
153.500/159.510 (123.0 Hz) IB Repeater [Benton, Polk Co]
153.605/160.155 (97.4 Hz) IK Repeater [Benton, Polk Co]
153.635/160.185 IK Repeater [Benton, Polk Co]
452.050/457.050 (218.1 Hz) IB Repeater [Benton, Polk Co]
461.650/466.650 (179.9 Hz) IK Repeater [Benton, Polk Co]
462.000/467.000 IB Repeater [Benton, Polk Co]

If anyone has any more they have IDed I sure would like to some input.

Larry & group:-

I have not seen Jon Eaves in several years, but I remember he had one or two repeaters in what was known at that time as the Forest Products Radio Service. This service was unique in that it was one of the few non-government services in which repeaters were permitted below 450 mhz.
The Forest Products pool has now been merged with the other business and industrial conventional services.
I did not know that he had this many!
While I'm here may I ask a question about business repeaters. So-called "community" repeaters, in which a single frequency pair is shared among several users, used to require that both the owner/lessor of the repeater AND the users be licensed. Users had to meet the eligibility requirements for the business radio service (they weren't too exclusive). Is this STILL the case, or does only the owner of the repeater have to be licensed (like trunking)?
Jon has a two-way radio service business with many customers in the Southeast Tennessee area-based in Cleveland, I think.

1822. Larry's post-again

Yahoo group: chattradio
Date: 2003-02-16 19:40:49 UTC
From: tosborne37914 <tgo1@aol.com>
Topic: 1822 Message: 1822

Apparently, the current "IK" radio service is something akin to community repeaters in the UHF channels of the old "IB (business)" radio service. It is a private service but allows commercial resale of air time. I did not know that this was now allowed in VHF, but that shows you how out of touch I must be.
Now if the Eaves VHF assignments which are identified as "IK" are indeed like community repeaters-it is likely that multiple PL tones other than the ones cited will be used with these freqs as the repeaters become loaded.
I guess it is time for me to order a new part 47CFR part 90 and get up to date.

Yahoo group: chattradio
Date: 2003-03-14 13:36:27 UTC
From: tgo1@aol.com
Topic: 1827 Message: 1827

In an earlier post, I expressed some doubt as to whether the Tennessee Wildlife Resources Agency Astro digital VHF system was APCO-25 or not, as one of my radios was demodulating it successfully, and I did not believe it to be a P25 radio.
In reviewing the flash code in the radio indicated it was indeed a P25-compliant radio, so this is why it was able to demod the transmissions.
My apologies to the group and especially to Larry van Horn, who encouraged me to dig deeper into this.

Knoxville and Knox County have used a trunk system since about 1988.
It is Motorola of some sort of variation of Smartnet. A quasi-
governmental taxing body, the Knox County Emergency Communications
District, runs it and the Call Centre in the City-County Building.
It is funded by a tax on monthly telephoe bills from each of the four
telecommunications providers serving the county. The radios are
rented to each using agency (originally $25 per month, I think this
has gone up).
I don't yet have a trunking scanner, so I don't monitor this system.
The BIG PROBLEM I have seen between the information pages on the
internet and the displays I have seen on other folk's scanners is
that the published info always gives TG's in a format of "XXX-X."
whereas the TG display on the BC-780 or whatever is "XXXXX," or a
five-digit numerical value. Some of you wiser heads, please help me
on this on.
There were coverage issues in a few isolated areas of the county when
the system originally went in with the three county-owned sites,
resulting in the non-fatal but serious shooting of two deputies who
could not call for help. Additional sites have been added, and I
believe the system is working OK now. Mobile units were not
purchased in the early days, believing adequate coverage would be
available to the individual user with portables (STX800's). Since
that time, at least the sheriff's dept. has added mobiles (either
X9000E's or Spectras).
I am told that mobile data will be, or is in the process of being
added.
Would some of you help me with the talk-group ID issue? Thanks,

Thad Osborne
Knoxville

Topic: 1831 Message: 1835

The TG format of XXX-X is a Motorola Type 1 system. Most Public Safety systems are now Type 2 and have the XXXXX format.

I understand the Knoxville system is supposed to be moving to an all Type 2 system but I don't know anything about a target date to finish moving over.

I don't yet have a trunking scanner, so I don't monitor this system. The BIG PROBLEM I have seen between the information pages on the internet and the displays I have seen on other folk's scanners is that the published info always gives TG's in a format of "XXX-X." whereas the TG display on the BC-780 or whatever is "XXXXX," or a five-digit numerical value. Some of you wiser heads, please help me on this on.

1837. Trunked System Migration

Yahoo group: chattradio
Date: 2003-04-01 07:28:47 UTC
From: ke4aik
Topic: 1837 Message: 1837

Combined Public Safety Trunked Radio system to migrate to EDACS ProVoice system. The system and radios are coming up on 10 years old, so replacement issues must be dealt with. With the advent of scanners that will listen to APCO-25 the only real choice for secure communications is the ProVoice system.

Digital equipment has a more effective method of encryption than the current analog equipment in use. The addition of a 5th tower site will improve the coverage of the current system. The new system will allow an easier integration of current VHF users through system patches and would allow multiple VHF users to be patched into the same talkgroup as needed.

The changeover could take 6 months to a year beginning July 1st.

I am having a hard time figureing out trunked systems. I have a pro-95 scanner I just bought but haven't figured out how to set up the trunking. I am trying to get chatt. PD programed. what I can't figure out is what frequency to set it for and what type system they are on their 2 digit id number and group number. Anybody with a radio shack scanner help me? I now how to get to the mode but just don't know what to type in.

I had punched in all that information and a whole lot of ID's but I still can't get it to follow right I got it set up as a normal 800 base mode (.0125 instead of .0000) I have tried everything the manual says and have been trying to get it to go since 11:30 pm last night. Does the frequencies have to be programmed in a specific order or is their some other trick I can try?

My compliments on a VERY well contrived April Fools' hoax. I immediately suspected a ruse, and took a look at the FCC database to see the date of first use for the Chattanooga Hamilton Co. TRS. Seeing that it was April 1993 convinced me that MAYBE the current system had been in use for 10 years. At that point, I decided to maintain a discreet silence and let this matter play itself out without my participation. Looks like you got us.

Heh, don't know where I came up with the idea.

The system has been licensed for almost 10 years. CARTA and CFD were the first users, CFD has been trunked for 9+ years. CPD probably about 8 years. HCSO came on board probably 5 or maybe 6 years ago. Its been a steady progression, but alot of the equipment isn't really that old.

From: Suttles Wadie
Topic: 1837 Message: 1849

I take this information as a April fools joke. I've been on the Chattanooga Fire Department for 3.5 years and have a good understanding about our radio comms. Chattanooga TRS has a system that works and is constantly looking for user to grow. The system has assigned county id's for the volunteer fire departments, for when they decide to come aboard. The next point I want to bring to your attention is money and the 700mhz public safety spectrum change. Money is the real big issue as to why changing the TRS system from a working analog system, to digital proprietary system would be taking a giant leap into the past. This is considered to be frivolous spending, when most of the city's employees will not see a cost of living increase for a while. And as for 700 mhz, our city is aware of this issue and knows that it would potentially require some new equipment. But changing to a proprietary system that will potentially require a change of equipment due to the spectrum change, would be more costly. So until I see or hear this April fool's thread from my administrative staff, I am going to treat this information as such.
Thank you for your time.

From what I understand, it is used so that the dispatch center can open the bay doors of the station where a piece of equipment is located when a call for that unit is being dispatched. There may be other uses for the system too. I am not sure.

MOSCAD FSA is a data system that operates over radio that allows the dispatcher to remotely open and close overhead doors at the fire stations, along with controlling other things, like the lights, that may be configured by the radio shop.

Pretty neat system. One good purpose is whenever there is a large fire and they begin relocating engines to other stations, the dispatcher is able to remotely open the doors and let the crews enter the station.

MOSCAD also operates the station printers which prints out the run information for the responding companies. I think this eliminated the need for every hall to have 1 fireman that stayed up all night and listened for the call when it was sent on the old analog station alarm lines.

And sounds the station alarm and turns all the lights on at the halls for the night runs.

Pretty useful, alot of stuff sent with just a few bursts of data

From: Glen Hendon
Topic: 1861 Message: 1861

This is not a Chattanooga radio question but I didn't know where else to turn to to get a decent answer. I am curious as to how a shortwave broadcasters antenna works (eg. WWCR in nashville uses an ERP of 1.3 million watts yet cannot be picked up in Chattanooga but WSM at 50kw can) as compared to an AM broadcaster's single vertical. Also why did the old time AMer's use horizontal arrays (they looked like giant clotheslines) and now they are always vertical?

Wow! That's a real piece of scanner history! I wonder what happened to
his 2004 that started the "mod" craze?

1864. F/S: Alinco DR-150T Transceiver

Yahoo group: chattradio
Date: 2003-04-09 03:21:00 UTC
From: Matthew Sadler
Topic: 1864 Message: 1864

For sale:

Alinco DR-150T 2 meter amateur radio transceiver. This is a 50 watt mobile unit. Includes power cable, DTMF microphone, and if you wanna meet me somewhere in Chattanooga and pick it up, I'll even include a Larsen 5/8 wave magnetic mount antenna!

Everything works great. Asking $100 plus shipping, if applicable.

If you are interested, email me DIRECTLY, OFF-LIST at mws@... .
Again, I'll be glad to meet the interested buyer pretty much anywhere in Chattanooga.

1865. Pro-95 PC software

Yahoo group: chattradio
Date: 2003-04-09 05:12:42 UTC
From: David Hastings
Topic: 1865 Message: 1865

Does anybody have the pc software for communicating with a pro-95 scanner that they can zip and post so I can download. I bought this cable and softwer at radioshck but it doesn' go any higher than the pro-89. Anyhow I can't find a setting that works.

1866. F/S: Motorola VHF Saber I

Yahoo group: chattradio
Date: 2003-04-09 05:21:31 UTC
From: Matthew Sadler
Topic: 1866 Message: 1866

I also have for sale a Motorola Saber I portable on VHF. Specific model number is H43SAN7139CN. Includes the radio and a good battery, antenna, belt clip, porta-pocket charger with both the wall wart and 12 VDC cigar plug (so you can use it either at your house or in the car), and a quality programming cable (this is the cable that goes between the radio and the RIB to program it).

This radio is in very nice shape and works quite well, but I have since upgraded to a MT2000.

Asking $140. Again, I'll meet you anywhere in Chattanooga so you (the buyer) can not only save the cost of shipping but get it quicker, too! Please email me OFF LIST, DIRECTLY at mws@... if interested.

Cable information is available at the website above. The cable sold at Radio Shack doesn't work. You can use a cable for an Icom T-81 or a Yaesu VX-1/VX-5 with a stereo to mono adapter available at Radio Shack.

The Nevada SE1300 discone antenna is well constructed and made with stainless steel elements, so it stands up well to being out in the weather year-round. This same antenna is also sold as the Diamond D130J by Grove Enterprises. See http://www.grove-ent.com/ANT9.html for a description. I have had good experience with mine. Of course a discone has no gain or directionality, but it does have the wide coverage you want and can be used to transmit on 2 meters and 70 cm as well.

Just a few things to think about Chris. Range at VHF/UHF frequencies are a function of antenna height, frequency being monitored, terrean and xmit power. Signals at 800 do NOT travel near as far as lower freqs. You could be on the edge of reception and no antenna might allow reception of the Chat TRS at your location. If you are using an outdoor antenna right now and not hearing the TRS a different antenna will probably not make any difference. Also you might want to look at your coax. If you are using RG-58 (shame shame) 95% of an 800 MHz signal is lost in the coax. I prefer RG-6 the best for the money loss coax for VHF/UHF. In fact, I use RG-75 for my HF installation as well. Love that coax. No need to buy 9913 hardline or that stuff if you are connecting a consumer scanner to it. In fact, that is silly and a waste of money.

If you want to talk abt this futher, give me a call at 800-438-8155 during our biz hours (9a-11:30a/12:30p-5p EDT M-F) We will be closed Good Friday but open Monday.

1879. Atomic Clock

Yahoo group: chattradio
Date: 2003-04-18 06:18:27 UTC
From: RangerComH@aol.com
Topic: 1879 Message: 1879

This may be a bit off topic, but someone here may know. I have a digital clock that receives broadcasts from the atomic clock to update time and date. For the past three months since I purchased it, it has worked fine. However, I glanced at it the other day, and it told me that it was March 19, 2009. The time was off by two hours and a few minutes. I reset the clock, which made it search for the signal again, and when it found it, the clock displayed March 19, 2009 again. I left it alone, and sometime today it reverted to the correct time and date. (It updates periodically) Now to the question: Is anyone aware if there was a malfunction at the transmitting location? Or could it have been recieving some kind of interference? I found this frequency information at http://www.wikipedia.org/wiki/Atomic_clock Radio clock (http://www.wikipedia.org/wiki/Radio_clock) broadcasts U.S. NIST Broadcasts: The U.S.'s NIST clocks are also available on longwave (http://www.wikipedia.org/wiki/Longwave) radio, station WWVB at 60KHz (binary coded decimal (http://www.wikipedia.org/wiki/Binary_coded_decimal) only) at 30,000W, and by shortwave (http://www.wikipedia.org/wiki/Shortwave) radio stations WWV (Fort Collins, Colorado (http://www.wikipedia.org/wiki/Fort_Collins%2C_Colorado)) and WWVH (Kekaha, Hawaii (http://www.wikipedia.org/wiki/Kekaha%2C_Hawaii), on Kauai) at 2.5, 5, 10 and 15 Mhz at 20,000W and 10,000W respectively. The batteries are fresh. [Non-text portions of this message have been removed]

Topic: 1879 Message: 1880

Try moving the clock around. Sometimes they don't get as good a signal as they need. Another possibility is the signal isn't as good with the changing of the seasons.

I'd recommend moving the clock around and find the best place for it.

Good advice on moving the clock around.

I have several radio controlled clocks and a CASIO radio control wristwatch.

Never had problem with the clocks. However, the watch must be placed nightly facing west at certain times of the year or it will produce symptoms that you describe with your clock. To avoid this I place watch facing west on nightstand each night.

From: mws6533
Topic: 1884 Message: 1884

I've just added a few new pages to ScanChattanooga.Com - extending our coverage into a fourth state! Pages are now available for North Carolina, as well as the southwestern counties of Cherokee (Andrews and Murphy) and Graham (Robbinsville, Santeetlah, and Stecoah). These pages are all available from the main index page of http://www.scanchattanooga.com/ .

As always, your comments and corrections are welcome!

And, for those of you in the area who want to listen in and see if there is a repeat of last weekend's "excitement," Lake Winnepesaukah's frequencies are 153.230 (security), 153.560 (ride operators), and 158.370 MHz, all simplex.

From: Mark McDougal
Topic: 1885 Message: 1888

Well this is going to sound kind of funny, it is not intended to be that.

Adam, Baker, and Charlie Dispatch are the dispatch TG's for the three sectors that the city of Chattanooga is divided into.

Info is the TG that the units go to when they need to "run" information on persons and vehicles or to get wreckers etc...

Car-to-car is what it says, a TG for the units to talk to each other not to say that the dispatcher cannot use it, but it is for car-to-car traffic mainly.

Detective TG is where you will find most of the detectives talking during there routine operations.

Hope this helps,
Mark

This Is From WRCBTV.com Channel 3 News's Website
Area Shaken By Earthquake

Parts of the Southeastern United States experienced an earthquake registering a 4.5 on the Richter Scale this morning at 4:59 a.m. EDT.
The U.S. Geological Service says the quake was centered 37 miles south of Chattanooga, near Mentone, Alabama on the AL-GA state line.

Reports indicate the quake was felt as far away as Murphy, NC, and into western Tennessee.

Callers to the WRCB newsroom described a trembling of up to 15 seconds, shaking windows, rocking houses, and wall hangings being shaken.

There were no immediate reports of damages or injuries.

The US Geological Service is researching, and has complete information on its website, www.usgs.gov.

What you have read is exactly correct/ But the caveat here is you must be real close. The freq counter started out as a test bench test equipment. A company several years ago found if you put an antenna on it instead of a wire probe, you could pull some signals from the either and display the freq. They have evolved over the years and the real hard core scanner folk (or "scanner scum" as we are affectionately known as at the annual Winterfest conventions) are the folks that usually own one. We use them in the field when we are trying to get a freq for a particular agency that eludes us on the scanner or we are confirming a specific agency to a specific frequency we have observed in the past.

Freq counters are not for everyone and they definitely do not replace the search function built-in to your scanner. They are more an eyeball to eyeball tool in the toolbox of the serious scanner enthusiast.

Hope that helps. 73 and good hunting all,

1896. RE: [chattradio] Freq Counters?

Yahoo group: chattradio
Date: 2003-04-29 17:46:05 UTC
From: Carr Fred
Topic: 1891 Message: 1896

http://www.optoelectronics.com/scout.htm

The above website shows the most popular unit.....I have one...they will also connect to several different scanning radios and will enter the frequency into the radio so you can hear what is on the channel.....as Larry said, you have to be close....and if you live in the middle of a bunch of antennas of power stations (I live on top of Signal Mtn)...it creates havoc when you use a bigger antenna on the counter.

Christopher wrote:

I have seen this website selling something called freq counters. It
says it will tell you the frequency of any radios near by. Is this
what they do? And how do they work?

What you have read is exactly correct/ But the caveat here is you must be real close. The freq counter started out as a test bench test equipment. A company several years ago found if you put an antenna on it instead of a wire probe, you could pull some signals from the either and display the freq. They have evolved over the years and the real hard core scanner folk (or "scanner scum" as we are affectionately known as at the annual Winterfest conventions) are the folks that usually own one. We use them in the field when we are trying to get a freq for a particular agency that eludes us on the scanner or we are confirming a specific agency to a specific frequency we have observed in the past.

Freq counters are not for everyone and they definitely do not replace the search function built-in to your scanner. They are more an eyeball to eyeball tool in the toolbox of the serious scanner enthusiast.

Hope that helps. 73 and good hunting all,

1903. Trunk Channels on Scanners

Yahoo group: chattradio
Date: 2003-05-04 22:48:02 UTC
From: Bill Crawford
Topic: 1903 Message: 1903

I've owned scanners in the past and had no problem understanding how/why frequencies we're entered to gain reception of things in this area.

I'll admit, I haven't been much of a scanner-buff over the last few years... I guess channels were dissappearing....

I've purchased a new scanner (BC785D) and find something called "trunked' channels... I know I'm getting older, but for the life of me I can't understand how 'trunk' frequencies work?? Can someone, in simple layman's terms, explain to me how this works?

I've read the manual several times but I must be 'stupid' or something as I don't seem to get the drift on how this works.

I let this scanner 'search' for frequencies that are active and found plenty so far... (it appears my old PD freq's have moved from 460.xxx to 859.xxx or there about)

Anyone have a recent Chattanooga listing of freq's?

Thanks in advance!
BC

1904. RE: [chattradio] Trunk Channels on Scanners

Yahoo group: chattradio
Date: 2003-05-05 15:21:16 UTC
From: Jonathan Guy
Topic: 1903 Message: 1904

Our list-owners website is the best place to start:

http://www.scanchattanooga.com

If you're looking for the Chattanooga/Hamilton County Trunk system go to:

http://www.scanchattanooga.com/trunking/chattanooga.html

Once you've gotten to the page above, turn to page 46 in the BC785D manual. Follow the steps for a Motorola Type II system, skip over the parts about "EDACS, LTR or Type I systems).

Here's another link that may help explain some of the terms used:

http://www.trunkedradio.net/modules.php?name=Content&pa=showpage&pid=1

The 785 is a BIG learning curve from a conventional scanner, but its the best base/mobile on the market as far as trunktrackers go (and most conventional scanners too for that matter).

Here's what I hope is the really simplified version of trunktracking:

Once you program all of the frequencies for a Motorola system, you'll notice that one channel is constantly "Buzzing", sounds like computer data, right? That's the Data Channel. All the two-way radios used by local public safety watch that data channel for information. When the radio "sees" that it's address has been activated the radio switches to the voice frequency assigned by the data channel and opens the squelch.

For example: A police officer is working Adam channel, just like on the old system. His radio is set to Adam channel, just like the old UHF system, BUT his radio is always watching that data channel instead of just waiting for the squelch to open. When his radio "sees" the code in the data stream that says "All radios on Adam Channel go to frequency xxx.xxxx" the officer's radio pops over to the new frequency and listens, opening the squelch and allowing the officer to hear what is said.

Once the transmission is over, the radio goes right back to watching the data channel for the next order to switch channels to receive another transmission.

Your scanner is doing the exact same thing that the officer's radio is doing, watching the control channel for instructions.

The beauty of a trunk system is that it uses ALL the frequencies available for communication. Remember on the old UHF system all that dead time between transmissions? When one channel (frequency) was busy, the other 4 were silent? The trunk system's computer looks at the busy frequencies vs.

the silent frequencies and assigns the channel (now called a talkgroup) to an unused frequency. This allows alot more "channels" (now called talkgroups) to be used by each agency.

I'm sure I've just created alot more questions, ask away and I'm sure someone on the list has an answer, or a better explanation that I've given.

I know that 145.350 for Northwest Georgia. 146.610 is used in Tennessee and
Georgia and 147.225 is used in Chattooga County Georgia. There may be
others, however, these are ones I routinely monitor.

From: Logan Carmichael
Topic: 1911 Message: 1911

One more thing, that's not of the rumours-mill nature....

If anyone is looking for a Yaesu VX-1 Transceiver, I have one for sale/trade......

It's in great shape, w/ orig. box, manual, charger, and leather case.... This HT transmits 2m and 70cm, and receives several other bands incl. FM broadcast, UHF/VHF-TV, AIR band, and a couple others!

$90 / negotiable, will consider trade for another dual-bander, in good cond., but a bit bigger with a bit more power! Will definately welcome older radio's, too!!!!

To get in touch with me:

From: Sam Hall
Topic: 1914 Message: 1917

If you mean the Ibiquity IBOC system (In-Band On-Channel), I don't think anyone in Chattanooga has even filed an application with the FCC to do so (as of the recent Radio World listing all current applications). I would expect Clear Channel to be the first in line as they are stock holders.

WSGC has been broadcasting RDS (Radio Data System) text information for quite some time, as is WKXJ. However, nobody is using it to display anything other than their call letters right now. In fact, some would consider RDS a dead issue - kinda like AM Stereo.

Hold on to your hats - IBOC, or to be better known by its marketing term "HD Radio" will be heavily promoted later this year.

1918. New dispatching center being constructed on Congress Parkway

Yahoo group: chattradio
Date: 2003-05-27 15:28:15 UTC
From: Larry Wilson
Topic: 1918 Message: 1918

Topping the list, though, is a piece of radio equipment for the new dispatching center being constructed on Congress Parkway.

The proposed equipment could make it possible to interconnect different radio frequencies to lighten the load on dispatchers during broad-scale emergencies and make it possible for various agencies to communicate with each other immediately, according to Hamby.

Ziegler and Miller saw a demonstration of the equipment recently, but county officials want to see a presentation from JPS Communication, of Raleigh, N.C., before deciding whether this is the best use of the money.

Hamby said officials also wanted to ask for a price on a case to house the equipment ☐ it's about four-feet tall ☐ to make it mobile. A price will also be requested on an electric generator to power the device when an electrical supply isn't available, she said.

Cost of the proposed radio equipment stands at about $31,000, including training and peripheral connections to link the hardware to the existing radio equipment. Adding a generator and a mobile cabinet would bring the total cost to almost $40,000, the amount of the grant the county is to receive.

Miller said the new radio equipment being considered is something that all emergency service agencies could use and would be a boon to communications countywide.

"What it does is give all the different agencies the ability to talk to each other at the same time," Miller said. "The incident commander on a scene can communicate with all personnel at the same time if he needs to. It could make all the difference in a situation where you have a developing disaster like a chemical spill with multiple agencies responding."

Interesting story, but I suspect that almost any Ham operator would be more than happy to rig the good folks up in McMinn County a "box" that would do the same thing for a lot less than $40K.

1920. Lifeforce

Yahoo group: chattradio
Date: 2003-05-28 15:00:10 UTC
From: Ron
Topic: 1765 Message: 1920

Hi All,

I have six frequencies programmed into my BC780XLT for Lifeforce:
462.95,467.95,463.00,468.00,463.05,and 468.05. Today I heard the
dispatcher instruct the pilot to switch to 'channel 16' and the
scanner did not pick it up on the above freqs. Anybody have other
freqs for Lifeforce??

TIA,
Ron

1921. Re: [chattradio] Lifeforce

I have heard Lifeforce use one of the Chattanooga Trunking Talkgroups once before. I was surprised that they did it, but I heard it nevertheless.

I don't know if the talkgroup is "Channel 16" or not.

From: Christopher
Topic: 1765 Message: 1922

Here's the Lifeforce frequencies that I have:
Repeater Out Repeater In
462.950 467.950 Hinch Mountain repeater = Med 9
463.000 468.000 Erlanger Medical Center repeater = Med 1
463.050 468.050 Signal Mountain repeater = Med 3
463.150 468.150 Sparta repeater = Med 7

As far as "Channel 16" it could be the EMS or Fire Dept.'s Channel
of the county or city that they are flying to.

Can anyone point me in the direction of the most current information of the Knox Co. TRS. Most sites such as trunkedradio.net indicate that changes are underway (Type I to Type II), but it seems nothing has been updated within the past few months.

As far as I know, Knoxville has upgraded the Fire and UTK talk groups only. I will be paying a personal visit to Knoxville sometime within the month. I will stay for a day, seeing what's new on the system and what I can contribute to trunkedradio.net and the gentleman who started the upgrade info on the link page of trunkedradio's Knoxville TRS info. So stay tuned for additional information, if applicable.
Thanks.

Appears the information is up to date. Just got back from three days in Knoxville. The new type II talkgroups for KFD are active as shown on trunkedradio.net. The old type I talkgroups for KFD are silent, no simultcast. The Type II UTK talkgroups, as always, are active. On the way out of town, I heard conversations about a temporary fence that had been left along Neyland Drive. Train aparently struck it, scattering debris on Neyland Drive. Lots of on-the-air passing of the buck about who was responsible for clean up!

1926. Power Outages / Ham Radio Proves Reliable

Yahoo group: chattradio
Date: 2003-06-12 06:46:48 UTC
From: Chris J. Palmgren
Topic: 1926 Message: 1926

Folks,

Just got my power back on about 30 minutes ago. I was without power from 6:10 p.m. until 2:00 a.m. Numerous trees are down throughout Hamilton County and Chattanooga from tonight's severe thunderstorms.

Ham radio repeaters 146.61, 146.79, 147.18, 442.925, 444.45, 224.92 were all on backup power during the outages. The repeaters provided reliable communications during the blackout. 147.18 on Oswald Dome in Polk County remains on battery at the time of this message. 442.25 on Oswald Dome does not have battery backup and remains off-the-air.

The following radio stations were knocked off-the-air during the storm: 89.7, 90.5, 92.3, 93.7, 94.3, 97.3 (Tx on / STL off) and 99.3.

Nooga.com reports 150,000+ EPB customers were affected by the storm.

Channel 3 reports a 250 foot cell tower on Lookout Mtn. in Dade Co. collapsed during the storm.

Channel 9 reports their AWS site at the Hamilton Co. EOC on Amnicola Hwy. reported a peak wind gust of 69 m.p.h.

Does anyone know what happened to the Chattanooga TRS during the storm? I heard the city fire department had to resort to using their cricket phones in the engines because a problem developed with the TRS during the storm.

Chris

###

Powerful Storm Puts Much Of City In Dark
posted June 11, 2003

A powerful storm of 60 miles per hour winds toppled hundreds of trees and left much of the city without power about 6 p.m. Wednesday.

The brief storm knocked off power from north Georgia to Lookout Mountain to Soddy-Daisy and East Brainerd.

Some 58,000 people, an estimated one third of the Electric Power Board custmers, were affected.

EPB has called in all of their line crews and restoration support personnel, and is calling for the assistance of all available contract crews to help restore service.

A number of trees landed on houses and streets.

One at Ruby Falls blocked Scenic Highway going up Lookout Mountain and crumpled power lines.

Shortly after the storm crews were chopping up a number of trees that fell downtown where the Riverbend Festival is going on. Most of the metal fence around the Butcher Block was knocked to the ground.

The high winds blew out large plate glassed windows at the annex of First Presbyterian Church on McCallie Avenue.

Numerous traffic signals were not working.

One of the hardest hit areas was along Tremont Street in North Chattanooga were many trees were down.

Customers experiencing a service interruption should call EPB's customer service line at 648-2706, and use the automated system to report their outage. This automated system is the quickest way for repair crew dispatchers to receive notice of the outage, and it allows EPB to keep its customer service telephone lines available for responding to emergency situations.

EPB also urges its customers to be safe by avoiding downed power lines. Any downed line should be considered energized and therefore dangerous.

1927. Power Outage Update

Yahoo group: chattradio
Date: 2003-06-12 15:56:12 UTC
From: Chris Palmgren
Topic: 1927 Message: 1927

EPB has called in all of its line crews and restoration support personnel, its contract crews, and crews from Knoxville and Middle Tennessee to help restore service to the estimated 23,000 customers who remain without electricity following a storm that snapped trees and downed power lines Wednesday evening.

The storm, which packed winds estimated at more than 60 miles per hour, ripped through EPB's service area around 6 p.m. interrupting service to 58,000, more than one-third of the company's 150,000 customers. Support crews from the Knoxville and Middle Tennessee areas joined EPB crews overnight, raising the total number of number of on-duty line and support workers to 450. Line crews will be working around the clock to repair extensive damage and restore electricity to customers in areas extending from Tiftonia to Harrison. The company continues to collect data and assess the damage, and estimates that it will take as long as four days to fully restore electricity service to the area.

Customers experiencing a service interruption should call EPB's customer service line at 648-2706, and use the automated system to report their outage. This automated system is the quickest way for repair crew dispatchers to receive notice of the outage, and it allows EPB to keep its customer service telephone lines available for responding to emergency situations.

EPB also urges its customers to be safe by avoiding downed power lines. Any downed line should be considered energized and therefore dangerous.

We had a microwave communication tower to become dismantled during the storm. The system is not 100% as of yet. Notice the scratchiness and the sounds of a motor on certain transmissions of communication. But it's my understanding that it's being worked on and is close to restoration.

1931. Bonnaroo Festival in Manchester, TN

Yahoo group: chattradio
Date: 2003-06-14 07:00:15 UTC
From: Matthew Sadler
Topic: 1931 Message: 1931

Myself, and a few other list members took a brief trip up to Manchester earlier to listen in on some of the radio traffic up at the Bonnaroo Festival in Manchester, Tennessee. They have licensed eight repeaters for temporary usage, and we found all eight to be in use and pretty active at that. Easily heard within Manchester proper; started picking them up about five miles south of town.

They are, with PL tones:

451.300 / 107.2 - Channel 1 / Command Center
451.325 / 110.9
451.350 / 114.8
451.375 / 118.8
451.400 / 123.0 - Channel 5 / Medical
451.425 / 127.3
451.450 / 131.8
451.475 / 136.5 - Parking

Also active were two repeaters on the UHF itinerant frequencies:

464.500 / 241.8
464.550 / 250.3

And the Wal-Mart up there uses 154.600 to communicate. :)

Yahoo group: chattradio
Date: 2003-06-17 19:36:22 UTC
From: Jonathan Guy
Topic: 1932 Message: 1934

The PRO-96 may be as revolutionary in its own way as the original trunktracker. The virtual memory of 11 scanners may just be what we've all been looking for.

I'm still not thrilled with their "5 sub-banks of 30" for talkgroup storage. My problem with this arrangement is that I store "agencies" by bank. While we'll have more actual talkgroups, it means combining more "agencies" together to do so. The <Function> key is used for almost every other key on the keypad, too bad it can't be used to turn additional talkgroup sub-banks on and off.

Larry,

Any concerns that the sensitivity specs will turn off serious hobbyists, despite some advantages of the Pro 96 over Uniden's current lineup?

Hey Jeff. Darn longtime no hear from. You really ought to check in more often here. Nice to see you post again.

Actually I have no concern on any of it yet as we haven't had a chance to test one. The specs I quoted were from the back of the manual and they looked nearly identical to the 95 specs. So I am not sure if they just copied those over or they are the real deal.

This scanner sensitivity issue has been debated for years and I guess it really depends on were you use your radio at (the RF environment). None of these under $1000 radios are going to have the greatest dynamic range in the world. And the wider the freq coverage at a set price the worse that DR figure will get. Now in a rural environment I don't care so much about images spurs, strong signal overload, receiver desense and the like. I want and need sensitivity. So I will gladly trade some of the DR for a bit of receiver sensitivity. But put me into downtown Chattanooga or damn even worse Atlanta and guess what I am going to be howling for?

Any and all these radios are compromises at best - cost vs performance. Traditionally over the years the GRE radios have been a bit more deaf than the hotter Uniden models. Actually that is another poor man's means to reach a better DR - pad down the receiver sense. And for those of us who owned the older Pro-2003/4/5/6, Pro-43 etc, that was just fine in most cases. I could build on my options at that point, Get the antenna higher for better range or maybe even add a preamp for the weaker signal amplication due to the more restrictive sensitivity sections traditionally associated with the GRE radios.

But for the Uniden folks (especially those that owned the older double conversion models) you had one speed only --- hot! If you didn't like it hot or your environment was to hot for the radio, your options were way limited. Usualy that meant dumbing down the antenna system, system attebuators, filters, etc.

Actually now that I think about it I much prefer to step up than step down, It is easier and cheaper.

Just a thought or two from B-town on a rainy gloomy afternoon.

Does anybody know a date that the Pro-96 is going to be released? Is
the sensitivity not very good on it? And is the 500 channels for sure,
I think it would need at least 1,0000.

I do not own a trunking-capable scanner yet, but I have borrowed two to monitor the system owned by the "Knox County Emergency Communications District." All the talk groups ID's displayed are five-digit numeric, like the Chattanooga/Hamilton County system, not the ones shown in trunkedradio.net. Therefore, I have some doubt that the information on that page is correct. Maybe I'm not in the right area.

1944. Red Bank Police officer killed in traffic accident

Yahoo group: chattradio
Date: 2003-06-28 17:46:12 UTC
From: Brian
Topic: 1944 Message: 1944

A Red Bank Police officer and a motorist were killed in an early-morning crash on Dayton Boulevard near Signal Mountain Boulevard.

Red Bank Police Chief Larry Sneed said the officer killed was 30-year-old Gerald Warf.

He was a 3-year-veteran of the Red Bank Police Department and leaves a wife and 2-year-old son.

The identify of the motorist killed was not yet released.

Chief Sneed said Officer Warf was going north on Dayton Boulevard on a wreck call when he hit a street sweeper in front of Stovall Equipment. It happened about 3:15 a.m.

1950. For SALE - Icom 746

Yahoo group: chattradio
Date: 2003-07-03 17:31:52 UTC
From: Jonathan Guy
Topic: 1950 Message: 1950

I have an Icom 746 for sale. 2m, 6m, HF all mode transceiver.

- Less than 20 hours operating time
- No scratches, dings, dents...looks GREAT
- Manual, included schematic, and warranty card never filled out.
- New power cable (I'm keeping the original since it'll work with my 706)
- Handheld microphone included.
- In the original box, all packing materials and its even back in the original plastic bag.

I never have the time to use it when I'm at home, and its just too big to fit in the truck :)

Asking $1,000 cash.

Jonathan - ke4aik@...

Thanks

I have used the 245, the Pro-92, and the Pro-95. Of the three, the 95
is the best I have used. Along with the $15 RS 800mhz antenna, it
can't be beat, unless you use a Motorola!
The 95 uses control channel only mode, has alphanumerics for bank and
channel designators.

Hope this helps,
Larry

1955. Re: [chattradio] Which is the best trunktracker?

From: Jim Knight
Topic: 1953 Message: 1955

If you only want to listen to the police, a pro-93 or pro-95 will work just fine for you. You can program in the talkgroups you want to listen to and run it in "closed" mode which means it will only stop on the programmed talkgroups. These two radios also have a substantial advantage over any of the Uniden handhelds - they accept plain, ordinary AA cells and come with two battery holders - one for rechargeable cells and one for non-rechargables. I have a pro-95 and it is now my personal scanner of choice while traveling. For base operation I think the Uniden BC780 is the best ever made. I like to search for new or infrequently used talkgroups while having known ones ID'd by the scanner, and the 780 does this the best of any radio. The GRE (Radio Shack) base units won't let you lock out talkgroups while searching (the Uniden equivalent of open mode), and the new BC785 won't ID known talkgroups with the programmed alpha tag while searching.

1956. GSP encrypted coding system

Yahoo group: chattradio
Date: 2003-07-23 14:22:48 UTC
From: Dave
Topic: 1956 Message: 1956

The following excerpt below is from the Walker County Messenger and describes how GSP along with local agencies conducted road blocks in North Ga on Friday. Can anyone explain how this encrypted system might work from a logistical standpoint. I would have thought one could have used mobile or handheld between units but as far as communicating with a central dispatch? Wouldn't that require a lot of hardware including possibly repeaters capable of receiving encrypted signals?

Each team was made up of at least 4 troopers, county deputies and city officers situated at road blocks within LaFayette and Trenton. The plan included a choice of selected roads for each team and totaled over 40 locations in both counties.

Stultz said an elaborate encrypted coding system was used to mask radio traffic and share road locations between authorities, preventing eavesdroppers from knowing their location.

"The reason this is so important is that many criminals and those who attempt to avoid these checks use police scanners, cell phones and other listening and communication devices," Stultz said.

1957. Re: [chattradio] GSP encrypted coding system

>
>

This is just a guess, but maybe they just developed a specific code system
such as say road block on Highway 136 was refered to as "location 3" or
something but still transmitted "in the clear". I got stopped on my way home in the
road block set up on 136 East in front of LaFayette Medical Park and the
trooper who checked my license appeared to be wearing just a regular issue radio.

Like you say, if it was transmitted as "encrypted" data then that could pose
a logistics problem.

1958. Which One?

Yahoo group: chattradio
Date: 2003-08-05 17:23:18 UTC
From: Christopher
Topic: 1958 Message: 1958

I need a new scanner to go into my truck. My area does not use a digital system so I don't need a Uniden BC785D, but I would like to have one with at least 500 channels. Should I get a Uniden BC895XLT, BC780XLT, BC785D, or wait on a base model of Radioshack's Pro-96?

1959. Re: [chattradio] Which One?

Yahoo group: chattradio
Date: 2003-08-06 01:27:34 UTC
From: Jim Knight
Topic: 1958 Message: 1959

Personally I favor the BC780 of the models you mention. It has 16 character alphanumeric tagging which the 895
doesn't, and costs less than the BC785 or Pro 96. The 780 also will display the descriptions of talkgroups you have
programmed into scan lists, even when you are searching for new ones. The 785 will not do that (a huge blunder by
Uniden IMO).

Topic: 1960 Message: 1961

I'm a little surprised that your message has been posted for several hours and no one has gotten around to telling you this yet.

Check out Matthew's site:
http://www.scanchattanooga.com/

Without a doubt, it's the "Bible" of scanning in this area. If there's anything transmitting in Marion County that he does not have listed, you can bet it's not worth listening to anyway.

1963. Bearcat 100XL Problem

Yahoo group: chattradio
Date: 2003-08-09 15:48:19 UTC
From: Richard L. Elliston
Topic: 1963 Message: 1963

I am attempting to restore a BC 100XL that I purchased in 1987. I'm having a problem with intermittent loss of audio. The radio goes silent. I know the receiver is continuing to operate during these silent periods because the scanner continues to scan and stops on channels known to be active. All audio connections at volume control, earphone jack and board are sound. Any ideas?

Don't know for certain, but they may well start using that as their main police channel and move off of the business band repeater frequency pair they are currently using.

1972. Pro-94 (A?) Help

Yahoo group: chattradio
Date: 2003-08-23 05:19:53 UTC
From: LFDGAJR@aol.com
Topic: 1972 Message: 1972

I just tonight bought a Radio Shack Pro-94 scanner because it was onsale at my local Radio Shack (LaFayette). I was wanting a scanner I could use to scan conventional and trunked systems simultaneously. I have been using a Pro-90 with great success, but of course this scanner doesn't allow trunked and conventional scanning at the same time. Now it seems I have learned that the Pro-94 doesn't allow both to be scanned at the same time, but the Pro-94A does. I am unclear on how to tell the two apart. I visited the Radio Shack site but walked away with more questions than I got answers (pun intended). To complicate matters, I payed for a NEW unit, but what I got was clearly a USED radio. Most of the internal packaging is missing, the books look like they have seen heavy use, and one page is even ripped out from the Trunked Guide. On the Radio Shack website it refered to the radios as item numbers 20-524 and 20-524A. The box I have says 20-524 so I assumed based on that that I have just a plain old Pro-94. But wait there's more. The user manuals are listed on the website as 200-0524 and 200-0524A. Guess what number book I have? Thats right, 200-0524A. Is it possible I have a collection of parts from more than one radio? Now come tomorrow morning (or early afternoon) I am going to take the radio back to the store, but I was kinda hoping I could get some information on how to positively identify a Pro-94A since that version allows trunked and conventional at the same time. On a related note, is it even worth my money to try to get a Pro-94A?

Thanks for your help,
Christian KF4ZMB

From: John Creel
Topic: 1972 Message: 1973

Why try to scan both simultaneously? I prefer two radios because the trunking system seems to be so busy that the non-trunking spectrum wouldn't get scanned often enough. The Uniden BC-780 & BC-245 do both I believe.

Thanks for the information. I might try to do it that way then. I do have a
Pro-94A now, but like you say the amount of traffic on the trunked system
will probably keep the conventionals from being scanned much. I may continue to
use my Pro-90 for the trunked system or vice versa.

Thanks for the help,
Christian

From: Matthew Sadler
Topic: 1977 Message: 1978

Try 152.930 MHz. They just got a license for a base station on that frequency in Huntsville, AL. They probably alert them by telephone, but if they are airborne you can't use a cell or PCS phone, hence the radio.

From the Chattanoogan.Com:

http://www.chattanoogan.com/articles/article_40435.asp

"Motorola Corporation is getting the contract for a $3.8 million upgrade to the radio system used by local public agencies.

Bob Randolph of Motorola said the upgrade will extend the life of the system by 12-15 years.

He said it would also allow the expansion of the system to include agencies in other counties.

The system serves public safety agencies in Hamilton County as well as UTC and Erlanger Medical Center.

The arrangment is a six-year tax exempt lease. After that period, the system will belong to the city and county.

Part of the funding is a $900,000 Homeland Security federal grant.

Other costs are to be covered by the funds collected on user fees for the 911 system."

1988. News: "Motorola to Provide $3.8 Million Upgrade to Local Radio System"

Yahoo group: chattradio
Date: 2003-09-03 06:33:53 UTC
From: Matthew Sadler
Topic: 1988 Message: 1988

From the Chattanoogan.Com:

http://www.chattanoogan.com/articles/article_40435.asp

"Motorola Corporation is getting the contract for a $3.8 million upgrade to the radio system used by local public agencies.

Bob Randolph of Motorola said the upgrade will extend the life of the system by 12-15 years.

He said it would also allow the expansion of the system to include agencies in other counties.

The system serves public safety agencies in Hamilton County as well as UTC and Erlanger Medical Center.

The arrangment is a six-year tax exempt lease. After that period, the system will belong to the city and county.

Part of the funding is a $900,000 Homeland Security federal grant.

Other costs are to be covered by the funds collected on user fees for the 911 system."

1990. Updates

Yahoo group: chattradio
Date: 2003-09-05 01:03:05 UTC
From: Matthew Sadler
Topic: 1990 Message: 1990

For some reason, Yahoo Groups doesn't seem to want to cooperate with me. If you are seeing this message - again - please bear with me.

Memorial Hospital EMS has changed its application, instead applying for 152.870 MHz as a repeater output, and 160.080 MHz as the repeater input.

Lafayette (GA) Housing Authority has applied for a repeater, 151.520 MHz output and 160.185 MHz input.

Also, the Chattanoogan.Com has an article on a $3.8 million contract with Motorola to upgrade the Chattanooga City 800 MHz radio system. The article is at http://www.chattanoogan.com/articles/article_40435.asp . Anyone with more information on what this upgrade will involve is invited to post to the list, or you may email me direct at mws@... and I will be glad to repost the information and keep you anonymous. The article is fairly vague, focusing more on how it will be paid for as opposed to what it will actually do.

1996. Sept VHF contest location

Yahoo group: chattradio
Date: 2003-09-08 16:49:23 UTC
From: ae4bk
Topic: 1996 Message: 1996

The Ocoee Amateur Radio Society (OARS) will be active during the Sept VHF contest from just inside North Carolina (5377 ft elevation) in EM75 for the duration of the contest which is Sept 13th at 2pm eastern to Sept 14th at 11pm eastern. We would appreciate as many contacts from the Chattanooga area as possible on 6 ssb, 2 ssb, 432 ssb, or 6 fm, 2 fm, 220 fm, or 440 fm. We will be mostly on ssb, but should be listening to 146.550 and 446.000. Working into the Chattanooga area on any of these bands should be no problem. Got on the air and work us if you can. We would appreciate the contacts and points.

Thanks,
Rusty Boling
AE4BK
OARS Vice President

1998. Upgrades to Chattanooga's trunking system

Yahoo group: chattradio
Date: 2003-09-20 04:46:14 UTC
From: Matthew Sadler
Topic: 1998 Message: 1998

I recently received an email from someone who would certainly be in the loop as far as what will be occuring with this upgrade to the city's trunking system, so I am passing along what that person has told me.

The upgrade that will be funded with the $3.8 million expenditure will upgrade the current analog, Smartnet system to an analog and digital mixed-mode Smartzone system. Here's what that means: digital operations would be possible with this new system while the current radios that they have can continue in service. What is more significant but I think a lot of folks would overlook is that the system will be upgraded from Smartnet to Smartzone. With Smartnet, the system is essentially one giant system. With Smartzone, it will work more like several small systems - each site, or each county, or however they decide to partition the system will be its own independent entity. These zones will each have their own sets of frequencies instead of reusing the same frequencies at every site, and radios would be able to roam from zone to zone. In addition, the sites would have only as many frequencies as are necessary to support the communications - in an area that doesn't see much activity, there would be fewer frequencies needed than in an urban area. These types of systems are being used already by many state systems as well as some large county systems.

The whole Smartzone issue means that the system would be easier to expand into neighboring counties as rumors have flown claiming it will do at some point, since independent frequencies can be obtained for those new sites. Some of the frequencies used by the system are in use by Cobb County, GA; Knoxville, TN; and Huntsville, AL - so, expanding into those areas without obtaining different frequencies would be difficult to do without this upgrade.

Obviously, none of this will happen overnight, and as the changes develop, you can count on ScanChattanooga.Com to keep you up-to-date on all of the happenings!

Yahoo group: chattradio
Date: 2003-09-20 05:21:45 UTC
From: Richard L. Elliston
Topic: 1967 Message: 1999

For Pro92 users, the PL tone is 136.5. Looks like the signal is significantly stronger than the old 152.315 mHz. I live about a mile south of Charleston, and picking up the old signal was a real challenge. I just plugged the new frequency into my Pro92. Using the stock rubber ducky antenna, the signal breaks through with the squelch at its maximum setting. I haven't checked the FCC database yet, but it's going to be interesting to find out where they put the transmitter.

The HELP trucks usually have multiple means of communication,
including NEXTEL. In TDOT Region 2 (Chattanooga), I believe routine
dispatching is on a low band repeater (see www.scanchattanooga.com
for this information. In Region 1, dispatching is on VHF (151.130
with DPL of 155, if my meory hsn't completely failed).

2006. Re: TDOT freq's

Yahoo group: chattradio
Date: 2003-10-06 20:42:19 UTC
From: mws6533
Topic: 2004 Message: 2006

TDOT HELP trucks in Chattanooga are dispatched on 47.360, which is a repeater. They do have Nextels and also have radios to communicate on any of the TDOT VHF-HI repeaters.

Thad is right, Knoxville TDOT HELP is on 151.130, as is TDOT HELP in Nashville.

Coffee Co is in District 2 (Chattanooga). Dispatch is on Ch 1 (42.42 base, 42.26 mobile)(2-freq simplex); car-car simplex is 42.36; closest repeater is at Sewanee in Franklin Co on 45.70.

Bedford Co is in Dist 7 (Lawrenceburg). I think dispatch is on Ch 1 here as well. Closest car-car repeater is at Lewisburg on 45.58. There is also a car-car repeater on 45.70 in Cannon County which is in Dist 6 (Cookeville, which may also)be available to Dist 7 units.

There are also High band stations at some of these locations: try 159.090 and 155.430 mhz.

2016. Old C&E trunked system off the air

Yahoo group: chattradio
Date: 2003-10-10 22:41:01 UTC
From: Jim Knight
Topic: 2016 Message: 2016

This has happened within the last few weeks - the old Communications and Electronics trunked system has gone silent, no control channel or voice activity any more. It was around the last time I monitored a few weeks ago. The system was on 861-864.1125, 862.3625, 863.3625 and 865.3625. (This system is not listed on Matthew's web page because it was supposed to be phased out, but I never knew a date when that was supposed to happen.) Users of the old system had already begun to move to the new system, which is described on Matthew's web page at
http://www.scanchattanooga.com/trunking/knnm730.html
It is listed as the Chattanooga SMR system, but this is just another name for Communications & Electronics, Inc. located on Latta St.
Some of the users of the old system had moved to the new system, such as Tennessee Waste Haulers on talkgroup 0101-1 and the downtown Marriott (Not 100% confirmed but reasonably certain) on 311-1, 311-2 and 311-3. These are the same talkgroups they were using on the old system.
Watch for other users to show up on the Chattanooga SMR system now, such as Phaltless paving on 009-1. This one is already listed on Matthew's web page but was actually on the old system the last time I monitored it.

What frequencies is Lifeforce using now? I assume they use the 800 trunked system when responding to something in Hamilton County, but do they use the same 800 system to talk to their base at Erlanger? Or are they dispatched now out of the county EMS? Anyone know? Do they have their own talkgroup ID#? Thanks.

2020. Anybody still have crystals for 154.22mHz?

Yahoo group: chattradio
Date: 2003-10-22 02:52:22 UTC
From: David Patterson
Topic: 2020 Message: 2020

Hi everyone.....new member to the group. I am looking for scanner crystals on 154.22mHz, which I understand was the old frequency for the Chattanooga FD. Yes, I DO understand that this is the year 2003 and that there are these new things called programmable scanners. :)

And I actually have several of them. But I have 5 or 6 old Regencys and about that many Bearcats sitting around, and I would like to fix some of them up to work on the local county Fire Department in Cherokee County, Georgia.

Would also be in the market for a couple of minitor pagers on that same freq.

Let me know!

Thanks,

David Patterson

2029. McMinn County Channels

Yahoo group: chattradio
Date: 2003-10-27 20:07:25 UTC
From: Robert
Topic: 2029 Message: 2029

154.7550 McMinn Channel 4/Mutual Aid
155.3700 McMinn Intercity
155.4900 McMinn Code 28
155.5200 McMinn Channel 12 (Niota car to car???)
155.5950 McMinn Channel 3- Car two Car. Also used at the justice center
155.7000 McMinn Primary
453.5750 McMinn Licensed by the SO but used by the county rural fire and rescue squads
McMinn, Englewood, Niota, and Calhoun use these frequencies
***I might have the channel 3 and code 28 reversed

152.3150 Athens Old Primary (I don't believe it is in use now)
151.1000 Athens Primary
155.4150 Athens Licensed to Athens, but not sure of use.
154.7550 Athens Channel 4/Mutual Aid I believe APD uses this to talk with the county sometimes.
155.7000 Athens County Primary Used to talk to county units

155.6550 Etowah Primary
155.7000 Etowah County Primary Used to talk to county units

100 units- Athens PD
400 units- McMinn SO
470 units- Wreckers
500 units- Etowah PD
600 units- Englewood PD
700 units- Niota PD
800 units- Calhoun PD
Riceville does not have a PD.

I have heard THP on County Primary several times. Rural fire can be heard occasionally on County Primary.

Dispatches
McMinn Control One- McMinn SO, Niota PD, Englewood PD, Calhoun PD, Rural Fire and Rescue, and EMS.
Athens Control One- Athens PD and Athens FD. Does not dispatch any EMS
Control Two- Public Works
Control Three- Etowah PD, Etowah FD, and I believe Etowah EMS

The only county channel that I know that I do not have is 15. Does any one know what Code 28 means in McMinn County?

I also heard yesterday that MCSD has a "Private Channel". They told dispatch that they were going to serve a warrant and would be on this

channel and that dispatch would not be able to monitor.
I am currently working on the new rural fire unit number. Use to communicate using personal unit numbers. Now, for the most part, they use apparatus numbers.

If any one see any thing that is wrong or any thing I have left out please let me know.

Robert

Good List!
I live in Bradley Co., about a mile south of the river, and I monitor these folks almost continuously. Although they're in Bradley County, I would suggest that you add Charleston PD and VFD to the list (155.67, 154.145).
If you're serious about monitoring the good folks up in McMinn County, it's a good idea to have a copy of Microsoft's Streets and Trips up and running because of the County Road numbering system.

Some times I hear Charleston PD on McMinn county Primary asking for backup. I did have the Channel 3 and Code reveresed. Before you had said that the new Athens Primary could be heard where you live. My mother lives on the other side of Cleveland, and I could pick the channel up there with a Pro-95 with a Radio Shack mag mount scanner antenna.

You might consider adding to the list a few of the Bowater and Olin frequencies. Emergency crews from Bradley and McMinn Counties would likely respond to a problem at either facility. As always, Matthew has a great list of both at http://www.scanchattanooga.com/

2034. MEMO LOSS

Yahoo group: chattradio
Date: 2003-10-31 19:33:34 UTC
From: Christopher Haggard
Topic: 2034 Message: 2034

I have got a base/mobile scanner that keeps losing it's memory. It's a Uniden BC700A from 1992/1993. I have it mounted it my truck and about every two weeks it says MEMO LOSS. I thought that since it is 11 years old that their could be a battery in it that can't hold a charge. Is that what's wrong with it?

2035. Re: MEMO LOSS

Replace the battery and you should not have that problem. That is the most likely culprit.
Now see you didn't have to run off to some other newsgroup to get your answer. ;-)

I have looked for a battery in it, but still have not found one. Would it be a watch battery? If not, what does it look like?

2038. 800 mhz. antenna site?

Yahoo group: chattradio
Date: 2003-11-05 19:35:08 UTC
From: wjay62
Topic: 2038 Message: 2038

Where is the 800 trunked radio antennas for the Hamilton County trunked radio system? The reason I am asking is this. I have an Antenex 800 mhz. antenna hooked to a pro-2067 scanner and have not been happy with the reception. The reception really gets bad in the south Broad street area (near KFC), and I have been told my problem may be with the RG58U coax. I heard a rumor that RG58 has a lot of loss on 800 mhz. I am thinking of going with a trunk lip mount (I currently use the Antenex mag mount) that has LMR 195, or something better, and see if that helps. Someone on a radio board told me they did this and got considerably better results. Has anyone else experienced the same problems as me? If not, what antenna setup are you using? And where can you buy a trunk lip mount that will have a better coax attached to it? Thanks!

2039. Re: 800 mhz. antenna site?

Yahoo group: chattradio
Date: 2003-11-05 19:42:30 UTC
From: Christopher Haggard
Topic: 2038 Message: 2039

The Chattanooga TRS antennas are on Lookout Mountain, Signal Mountain,
White Oak Mountain, & Flat Top Mountain.

From: Mark McDougal
Topic: 2038 Message: 2040

Well glad you only had a couple of questions...(joke!!)

As far as the system goes the towers are on Lookout,Signal,Whiteoak,and Bakewell Mountains.
You are right RG-58 is a very bad cable for higher frequencies, compared to ones with lower loss.
The mag-mount should be OK with a good antenna, that is the key. Now let me get to your receiver,
I had a 2067 for about three days. I found that scanner to be almost deaf, I am not saying that it is
a bad product, just personal observation OK. I replaced it with another scanner and all of my
reception problems where greatly reduced.

As far as what I use..Bearcat BC-785XLT, Maxrad T model trunk lip mount, Antennex dual-band commercial antenna (I get the trunk system fine, so the dual bander pulls in the surrounding agencies).

Hope this helps!!
Mark

I have always had good luck with just a plain mag-mount cell phone antenna with a TNC to BNC adapator. I have received the Chattanooga system with no problems in many different locations (although I don't get downtown very often so I can't vouch for how well it would work there). Wal-Mart used to have these antennas fior a decent price, but that might not be the case any more.

To add to your 800mhz reception problem, that area you speak of on Broad Street tends to cause a slight bit of interference. I'm not sure why. But between 25th and 27th Streets of Broad Street, a significant amount of loss is noticed. I will take in consideration also that the wiring could be the culprit. However, I have a Radio Shack mag mount cell phone antenna that I use with my BC250D. I'm not sure what type of wiring is used with this antenna. But I will say that this interference and signal loss is noticed on my radio. In fact, I had to travel from my fire station assignment to 20 fire station in Tiftonia this morning. The way I took was the exact route we speak of. And my travel time from Station 1 to Station 20 was during the morning radio test. The signal loss was quite noticeable when I arrived at the stop light of Broad and 25th. But as I began to travel onward, the signal loss ceased passed the radio station. So I hope that the result of my problem is too, a bad choice of wiring on the mount itself. I will be more than glad to rectify my problem for complete transmissions of radio traffic in many areas of the downtown area, East Brainerd area, the eastern foot of Missionary Ridge and many areas I found difficult to receive a good signal. Keep me posted on if wiring is the problem.

I hate to be the bearer of bad news, but the antenna coax isn't really your biggest problem. I too have a 2067 and it it's not the best receiver for 800. They were the early RS trunk-trackers and RS has come a looooonnnngggg way since then. The 2067 really shines with its PL/DPL search capability. As far as the antenna goes, he's right on target with that dualband Antennex, that's a good antenna.

A lot of these types of reception problems on 800 MHz may well not be due to antenna or radio issues, but instead due to interference caused by a nearby Nextel or cellular site. There is a cell site just near the area Wadie describes here, so if you are in an area where you obviously should have good reception, but instead do not, don't discount this possibility.

2049. New to the group and Scanning

Yahoo group: chattradio
Date: 2003-11-06 13:42:31 UTC
From: Wade D Hinkle
Topic: 2049 Message: 2049

I need help finding where I can get Radios and assecories for them. i havent had much luck finding them. Also if anyone is looking to sell any 800+ MGZ Radios, I might be interested. Sorry if I dont know all the correct terminology, but hopefully being in this group will improve it. :)

Thanks for all the help so far and in advance,

Wade

2050. Re: 800 mhz. antenna site?

Yahoo group: chattradio
Date: 2003-11-06 14:13:21 UTC
From: wjay62
Topic: 2038 Message: 2050

Thanks for all the replies. I, reluctantly, thought my problem could possibly be the 2067 itself, so here is what I plan to do. I am gonna hook the current antenna to a BC245XLT handheld and run that for a few days, to observe if the reception is any better. That way I should be able to tell if my problem is the receiver on the 2067, or a problem within the antenna. A guy told me he was having the same problem I am having, and he changed his coax to "low loss" LMR195, and he said the reception was drastically better. But I need to go back and ask him what scanner he was using at the time. Once again, thanks for all the help.

From: Larry Van Horn
Topic: 2038 Message: 2051

Possible answers to your query
1. RG-58 coax has a loss of almost 95% signal at 800 MHz. Dump it for something better. I'd rather use a straw.

2. Not knowing exactly your relationship at the location you describe below to the antenna farm, you may be getting skyline blockage or be in a dead zone. Remember this simple rule. RANGE at VHF/UHF is a function of antenna height and frequency monitored. Ground level is ground level.

3. You may be getting strong signal overload at that location. The receiver may be seeing a strong signal there at the exclusion of all others. Flip on attenuation at that site and see if the signal gets stronger. If it does that is the problem and your only recourse is a better scanner.

Don't run out there jumping on the antenna yet until you have done a bit of experimenting my friend.

73 and good hunting to all,

Subject: [chattradio] 800 mhz. antenna site?

Where is the 800 trunked radio antennas for the Hamilton County trunked radio system? The reason I am asking is this. I have an Antenex 800 mhz. antenna hooked to a pro-2067 scanner and have not been happy with the reception. The reception really gets bad in the south Broad street area (near KFC), and I have been told my problem may be with the RG58U coax. I heard a rumor that RG58 has a lot of loss on 800 mhz. I am thinking of going with a trunk lip mount (I currently use the Antenex mag mount) that has LMR 195, or something better, and see if that helps. Someone on a radio board told me they did this and got considerably better results. Has anyone else experienced the same problems as me? If not, what antenna setup are you using? And where can you buy a trunk lip mount that will have a better coax attached to it? Thanks!

I don't know what exactly you are looking for, but CT Morgan on 34th St. can probably help you if you want to stay local and talk face to face with an intelligent human about what you need. There are lots of places on the internet where you can order radio equipment and accessories. If you are looking for scanners or shortwave stuff, Grove Enterprises is the best, and you can call Larry (who also posts to and reads this group) for whatever help you need in that department. For ham equipment I'd recommend Ham Radio Outlet. As far as 800 MHz transcievers go, maybe someone else in the group has an idea on those. I often see them at hamfests but have never been interested in getting one for myself.

Robert,

I believe the cable is RG-58.

A more-important point, though ... are you really gaining anything by replacing a cable that's only 16-feet long, on an antenna designed to cover VHF / UHF / 800 MHz ?

The answer is no, and any cable thicker than RG-58 won't fit through the space in the antenna's plastic base for the cable outlet.

And, if you have to solder a connector on the cable end, and have soldering skills like mine, you'll loose a couple of dB right there :)

2057. low power fm

Yahoo group: chattradio
Date: 2003-11-09 21:43:19 UTC
From: Glen Hendon
Topic: 2057 Message: 2057

I know I should know this, but I'm not exactly clear on the legality of LP and translator stations. Can an individual appy for and get a license for a low-power FM transmitter with no intention of providing local programming, but lease it out to a full service station (or sattelite service) for profit? I know that 91.3 in Pikeville is a 10 watter that is leased out, maybe even owned by Jimmy Swaggert Ministries in Louisiana and simply retransmits thier Baton Rouge station.

2061. Re: [chattradio] low power fm

Yahoo group: chattradio
Date: 2003-11-11 09:06:10 UTC
From: Matthew Sadler
Topic: 2061 Message: 2061

From the FCC's LPFM page:

"LPFM stations are available to noncommercial educational entities and public safety and transportation organizations, but are not available to individuals or for commercial operations. Current broadcast licensees with interests in other media (broadcast or newspapers) are not eligible to obtain LPFM stations."

What you are (probably) hearing is W217BG, a translator. Translators can be used to extend a non-commercial broadcast station's coverage outside of the parent station's coverage area (i.e. you can use one to extend a non-comm station located in Memphis to, say, Charleston SC). Individuals CAN license a translator.

I say all of this with a caveat - it's virtually impossible to get a license for any of this stuff because the band is so crowded.

Sorry if I was abrupt in my original post, Robert.

Sometimes, our reception problems are due to circumstances over which we have no control.

Kudos to Matthew for mentioning the Cellular / PCS interference issue last week. If you look at the typical Nextel coverage of a community ... numerous high-powered sites, using frequencies interlaced with frequencies in use on the local public safety trunked system ... it's no wonder many agencies have complained about trunked system interference to the FCC.

Imagine what those Nextel signals can do to our wide-frequency hobby-grade scanners? It's the equivalent to hearing NWS braodcasts all across VHF high band. If you've been monitoring for a couple of decades, you know how lousy it can be having NWS pop up everywhere.

The reason I asked is that back during the summer I bout the antenna
and it seams that I have worse recption with this antena than with
the rubber ducky in the 800 mhz range. I live in athens, and before
I got the rs antenna I could pickup Chattanooga trunked system, and
sometimes even the Knox trunk system.

>> The reason I asked is that back during the summer I bout the antenna and it seams that I have worse recption with this antena than with the rubber ducky in the 800 mhz range.

Where you place the antenna on a vehicle can sometimes make a profound difference in reception.

Make sure the section of the body the antenna is attached to is well-grounded. Alot of cars, like my Saturn, are a mix of ABS plastic and metal, and the integrity of the grounds may be suspect. A body shop or the repair shop at a new car dealer may give you some additional input regarding your vehicle.

Placement of the antenna can also change the reception pattern. The roof often gives the most-omnidirectional pattern, while a corner may enhance signals coming from the opposite corner of the car.

Try not to place the scanner antenna close to the AM/FM antenna, as they may interact.

And, make sure the coax isn't being pinched / cut anywhere along its path to your scanner.

Good morning. I own a Saturn and the two antennas I have on the vehicle do a great job. I have a scanner antenna I use that sits on the top of the vehicle. I have my vhf antenna on the trunk and it does great there. As long as you use it on the roof or trunk where all the metal is you should do great.

I use my mag mount for home and on the road. Mostly when I am on the road I am in my pickup. I put the antenna right behind the cab, and I have good results there. On my wife's car I put it on the corner of the trunk. What I had said about not being able to pick up the trunked systems as well as I had in the past was at home. I live in Athens, about half way between Knoxville and Chattanooga. I know that is really stretching it picking up a 800mhz signal that far away, but for some reason my rubber ducky did better than my mag mount.

HAZARDOUS WEATHER OUTLOOK
NATIONAL WEATHER SERVICE MORRISTOWN TN
952 AM EST MON NOV 17 2003

THIS HAZARDOUS WEATHER OUTLOOK IS FOR EAST TENNESSEE...SOUTHWESTERN VIRGINIA AND EXTREME SOUTHWESTERN NORTH CAROLINA.

.DAYS TWO THROUGH SEVEN (TUESDAY THROUGH SUNDAY)...

A STRONG LOW PRESSURE SYSTEM AND ASSOCIATED COLD FRONT WILL MOVE THROUGH THE MISSISSIPPI VALLEY REGION LATE MONDAY NIGHT AND EARLY TUESDAY. A LINE OF STRONG TO SEVERE THUNDERSTORMS IS EXPECTED TO DEVELOP AHEAD OF THIS SYSTEM...AND POSSIBLY REACH THE TENNESSEE VALLEY AND SOUTHERN APPALACHIANS BY TUESDAY AFTERNOON OR EVENING. THE MAIN THREAT FROM THESE STORMS WILL BE DAMAGING STRAIGHT LINE WINDS IN EXCESS OF 50 MPH. HOWEVER...ISOLATED TORNADOES ARE POSSIBLE DUE TO FAVORABLE WIND PROFILES IN THE LOWER LEVELS OF THE ATMOSPHERE.

BREEZY TO WINDY CONDITIONS WILL LIKELY OCCUR AREAWIDE AS THE STORM SYSTEM APPROACHES ON TUESDAY...AND CAUSES SOUTHERLY WINDS TO INCREASE TO 20 TO 30 MPH...WITH HIGHER GUSTS EXPECTED IN THE HIGHER TERRAIN AREAS. LOCALLY HEAVY RAINFALL IN EXCESS OF ONE INCH WILL BE POSSIBLE MAINLY TUESDAY NIGHT...AS THE COLD FRONT PUSHES EASTWARD THROUGH THE REGION.

.SPOTTER INFORMATION STATEMENT...

SPOTTER ACTIVATION MAY BE NEEDED TUESDAY AFTERNOON AND EVENING.

2071. Keep your eyes on Congress and Tauzin

Yahoo group: chattradio
Date: 2003-11-21 18:16:41 UTC
From: Larry Van Horn
Topic: 2071 Message: 2071

Ladies and Gents,

Our old friend Billy Tauzin is doing his thing again. And while this has nothing to do with scanning, there are back door deals galore right now behind the doors of Congress. Please be very very vigilant until after Christmas as we have entered a dangerous period in this legislative session were back door deals are common place. Please indulge me here by illustrating the latest folly from Rep. Billy "Two Shoes A Dancing" Tauzin from Louisiana.

How Erecting a Hooters in Shreveport Ensures Our Energy Security

Any doubts about who owns the government, who the government is operated for and how the government is operated ought to be cleared up by <this little report in the Denver Post http://www.denverpost.com/Stories/0,1413,36~417~1773091,00.html>:

'The congressional energy bill that has emerged from conference committee is severely disappointing and should be voted down or filibustered in the Senate. ... Some $180 million will pay for a development in Shreveport, La. That project will use federal tax money to subsidize that city's first-ever Hooters restaurant. What a new Hooters has to do with America's energy situation may be best known to U.S. Rep. Bill Tauzin, a Louisiana congressman and key player in the secret conference committee talks. ... Some $120 million in federal money will build an indoor rain-forest entertainment center in Iowa. ... In Colorado, money from the energy bill will help pay to redevelop a mothballed shopping mall in Lakewood. ... The bill shifts the costs of environmental cleanups from the makers of MTBE fuel additives onto taxpayers. Meanwhile, an oilfield technique called hydraulic fracturing will be exempt from a key environmental law. The legislation also will make it harder to regulate wastewater runoff from construction sites. ... The bill also effectively reduces royalties that oil and gas companies pay the government.'

Again if Tauzin can slip $180 million dollars of pork through to fund a Hooters for Shreveport [hey Jim Springer at CAI did you have anything to do with this ;-)], then he won't have any problems getting some lousy anti-scanner legislation through this session.

2074. Re: 296D

Yahoo group: chattradio
Date: 2003-11-29 20:24:43 UTC
From: Wadie E. Suttles III
Topic: 2074 Message: 2074

My purchase is in for the Uniden 296D. After reading the Strong Signals post from Wes, I immediately placed an order from Grove Electronics. With my experience on the 250D, the only difference will be the full access to a 9.6k baud system and a few additives.
As posts continue to become available, more comparisons are being made between the 250D and the 296D. One of the major additives are the 6.25kHz step and the ability to monitor the once problematic 9.6k baud systems, such as Austin, Texas, Hamilton County, Ohio, and the State of Minnesota. I'm also being informed on the Automatic Digital System Detect. This will allow the receiver to automatically enable the card when an APCO 25 system is detected, instead of the manual enabling and disabling of the card. I'm not fully aware on how this works, but I'm sure see this will cause a draw to the battery, if this function is always on. For more information on the new release of the 296D, please read the new message board on the Strong Signals site, entitled "296D-796D board.

2075. Etowah TN Police

Yahoo group: chattradio
Date: 2003-12-02 07:20:16 UTC
From: Matthew Sadler
Topic: 2075 Message: 2075

Etowah, TN Police have apparently decided that since Athens Police now has their very own repeater, they need one too.

Application pending, they will use their current frequency of 155.655 as the repeater output and 158.9625 as the repeater input.

Also, I'm trying out some CSS stuff (it helps make it easier for me to change the format and layout of the pages) with a few pages - if you see things that don't display right or have a very strange layout, please email me off-list (and include what browser you are using).

From: Richard L. Elliston
Topic: 2075 Message: 2076

Without researching the question, my guess would be that both, Athens and Etowah, got their hands on some federal bucks that needed to be spent. I would further speculate that Motorola's lobbying had nothing to do with it.

From: Glen Hendon
Topic: 2077 Message: 2077

How can I safely connect a long wire antenna up to my home stereo reciever? Is there a type of arrester that i can either buy or make to attach inline to prevent static electricity buildup and destroying the reciever?

2078. New ARINC System

Yahoo group: chattradio
Date: 2003-12-09 19:48:45 UTC
From: Larry Van Horn
Topic: 2078 Message: 2078

There is a license pending for a new ARINC 800 Mhz two channel system at Lovell Field. I would really appreciate if you folks over that way would keep an eye out for it and let me know what you hear on it. Here are the two repeater outputs: 857.8875 858.8875 MHz.

For the Scan Chattanooga Website -- Update!
Also let me add some info to Matthews Aero list. I have one of my scanners devoted exclusively to the ARINC company freqs (128.826-132.000 MHz). These comms have fascinated me since I was knee high to my daddy. I have heard some of the neatest scanner comms on the se company frequencies over the years. Within this subband of the civil aviation band we have primarily five types of ARINC stations: enroute services, airlines, FBOs, public safety (air ambulance, etc), and yes, even the military. I was looking at Matthew's website and thought I would pass along some updates on the Chattanooga ARINC stations I am aware of.

ARINC Freqs (CHA)
129.000 KYG8 ComAir company freq
129.150 WLT7 FBO Krystal Aviation
129.600 WID7 Delta airlines enroute "Atlanta Dispatch" (there is also a site up in Knoxville on this freq)
129.750 WZN2 US Airways
129.850 WPTW588 Unknown user
130.500 KIM6 Midway Airlines in Chicago
130.950 WRU76 Air Shuttle
131.425 KKC9 No longer licensed in FCC database and I have no activity on this freq
131.550 KZY6 Nationwide primary ACARS digital frequency
131.575 WPTW588 Listed on Matthew's website, the frequency has been changed to 129.850 MHz. Frequency active in the past, but not sure if this was CHA or another airport.
131.750 KMV4 Northwest Airlink (Flagship callsign)
136.975 WPSQ701 Unknown user

I am working on an extensive list of other airline freqs in the range indicated above that I have monitored throughout the SE us. When I get a chance I will post them to the Monitoring Times website in the Reference Library (Frequency Exchange Section).

2080. Re: [chattradio] CHA ARINC Update

Yahoo group: chattradio
Date: 2003-12-09 23:05:05 UTC
From: Matthew Sadler
Topic: 2079 Message: 2080

Actually, Krystal decided that running an FBO didn't really fit in with their core business of selling gut bombs, so they sold it. I think they sold it about a year ago, not really sure as to how long ago it was.

I have changed the page that listed their frequencies that their crews used on the ground, but had overlooked the ARINC page. Thanks for all of your notes on that; I will be changing it shortly.

Finally, the two 800 MHz frequencies that ARINC has an application pending for are going to be part of their Nextel-ish iDEN system that they are implementing at other airports nationwide.

2081. New Hamilton County talkgroups

Yahoo group: chattradio
Date: 2003-12-12 06:39:37 UTC
From: Matthew Sadler
Topic: 2081 Message: 2081

Highway 58 VFD has migrated virtually all of its operations to the city/county 800 system, mainly staying on County Fire Main (19856). Some of the other departments have also started using the system more and more, and here are what department-specific talkgroups I've been able to identify thus far:

23216: Highway 58 VFD
23344: Mowbray VFD
23440: Chattanooga-Hamilton County Rescue Squad

Also, some of the National Park Service rangers have 800 radios now, they have their own talkgroup at 23056.

More as I find and identify it!

2082. Re: BC296D Delivered

Yahoo group: chattradio
Date: 2003-12-12 11:33:10 UTC
From: Wadie E. Suttles III
Topic: 2082 Message: 2082

This email is to let everyone know that the Uniden 296D was delivered at my doorstep last night and presented to me as Christmas gift, from my wife. OK, enough of the cush stuff. It's time for some information. To begin, many of you already know that the 250D and 296D are identical. From observation, the only difference is some wording on the front casing (Trunktracker IV)and the VFO is a orange color, instead of the clear. The card was preinstalled and the packing was typical of Uniden, with everything stashed in a small box. The function are just the same as the 250D. One of the many difference were the text display while in ID search mode. That was a treat. The other thing, in which I don't have a way of testing around here yet, is the automatic display, acknowledging that a digital system is present. As far as I'm concern, this isn't a wonderful additional, but it's useful in letting you know that the scanner has detection of a digital system. A few other additives are presented, but nothing that provides a large change in the scanner. I will provide more information as I get into the operations of the radio.
Thanks guys

2084. Milair on a Pro-96 scanner? Yes, Indeed!

Yahoo group: chattradio
Date: 2003-12-15 18:13:49 UTC
From: Larry Van Horn
Topic: 2084 Message: 2084

And some exciting developments on the Pro-96 scene:

I have learned (thanks to my old RCMA buddy Richard Newbould) that the Win96 scanner software for the Pro-96 written by Don Starr can open up nearly every frequency from 17.0-1300 MHz in this radio for reception. In his Version 1.25 of this software Don added an "extended frequencies" option, which seems to enable some sort of hidden test mode that allows reception of the frequency ranges below. Frequencies are sent from Win96, or can be entered directly on the scanner's keypad (including in SR6 - Limit Search).

Addendum: Some ranges (including cellular) still appear to be "blocked" by the scanner. Here are the ranges that seem to be "opened" using this feature in the software above:

17 - 25 MHz
54 - 108 MHz
225 - 406 MHz
512 - 550 MHz
764 - 806 MHz
960 - 1240 MHz

These extra ranges have fixed step sizes. Below 406 MHz the step is 5 kHz. Above 406 it is 6.25 kHz steps.

Original frequency coverage:
25 - 54 MHz
108-136.9875 MHz
137-174 MHz
216.0025-225 MHz
406-512 MHz
806-960 MHz (except cellular)
1240-1300MHz

But using the Win96 program software from Don Starr, your Pro-96 will now receive the following:

17 - 174 MHz
216.0025-550 Mhz
764-1300 MHz (less cellular)

This is major news for scanner buffs and expecially the Milcom crowd who need to be particularly aware of this development as it now allows them to receive the 225-400 MHz military aircraft band on a Pro-96 scanner. You can download a 15 day demo version at http://www.starrsoft.com/software/win96/

I have not verified this by pulling one of our Pro-96 scanners from stock, but will do so shortly.

Would appreciate it if one of you on Milcom could post this to that list. Due to Al's new stronger spam filters I can no longer access that list (and I'm the founding father). ;-)

Topic: 2085 Message: 2090

Chattanooga will have a 3 month to 1 year phase in time. The infrastructure is being revamped for the digital transmission and should be completed by April. The actual radios will be where the phase in time will take the longest, with the Chattanooga Fire Department receiving radios for use first. No one actually know the amount of digital transmissions will take place, since a vast majority of the system will remain in analog. But the fire department will have some digital communication.

Ron, I have a suggestion. I use a baby monitor to set next to my base (BC785D)scanner. then carry the receiver on my belt and anywhere on my property I can listen to the scanner. I learned this in a scanner tips and tricks column, so I can't take credit for the idea but, it works great....I would wager that it would work as well with your driveway monitor. You can buy these at any Baby Store or Target etc. Also you may get these that work on AC adapter or 9 volt batteries. Good Luck.

>My question is: If I go ahead and get the apco25 card for my 785D and install it will it automatically start receiving digital when they >switch. I understand it can be in effect suddenly and at anytime now.

To answer the original question, until more details are received about the new digital system your question is impossible to answer.

1. In theory the answer is yes. But as most locations have found when switching to digital formats they found a lot more dead spots in their coverage with the digital system than they had in analog because of the tighter requirements for digital reception. This might result in some re-engineering of the system, more sites, more frequencies, etc. That is probably why the large WAG in how long before the system stands up.

2. Don't buy the card until it is determined if it is a APCO-25 compliant system or something else that is proprietary and can not be monitored. If APCO-25 if it is a 3600 baud or 9600 baud system, and if 9600 baud does it use C4FM or CQPSK modulation. If it is a 9600 baud system stanton10@... then your 785 is useless. I wouldn't make any changes until we know more about what they are doing.
Maybe John Pless can turn some of his contacts for the inside scope.

Chattanooga will have a 3 month to 1 year phase in time. The infrastructure is being revamped for the digital transmission and should be completed by April. The actual radios will be where the phase in time will take the longest, with the Chattanooga Fire Department receiving radios for use first. No one actually know the amount of digital transmissions will take place, since a vast majority of the system will remain in analog. But the fire department will have some digital

communication.

2100. Let me try this again!

Yahoo group: chattradio
Date: 2003-12-18 18:11:07 UTC
From: Larry Van Horn
Topic: 2100 Message: 2100

After I hit the send button I realized I wasn't fully accurate so let me straighten this out.

295.800 is the primary boomer frequency for AR-633A/B, an anchor route.
Secondary boomer for this anchor is 319.700 MHz.
Atlanta ARTCC runs both the ARCP/Exit points comms as follows:
ARCP 254.300
Exit East 272.700/West 254.300

This is scheduled by the 134ARW/151ARS based out of McGhee-Tyson Airport in Knoxville, TN.

276.50 is the primary boomer frequency for AR-216, a refueling track.
Secondary boomer for this track is is also 319.700 MHz.
Again Atlanta ARTCC runs the ARCP/Exit points for the track as follows:

ARCP 363.100
Exit 257.900

Now this looks a bit better.
Also had activity on 343.000 this morning which is the first time that frequency has popped in this area. More soon.

CTCSS and DCS are two means of doing the same thing - which is keeping a receiver muted even when a signal is present on a frequency.

Let's say I own a repeater that I lease to multiple businesses. All of their radios would have the same frequencies programmed, but by using different CTCSS or DCS codes, I can put multiple users on there, and they will not hear each other. Now, they can't use the system at the same time, but they won't have to listen to each other.

CTCSS (aka PL) uses a subaudible tone. DCS (aka DPL) uses a digital signal transmitted as a subaudible tone giving many additional codes.

Hope this answers your questions; if not, let me know and I'll be glad to help!

Topic: 2112 Message: 2113

The way I understand it, VHF has better penetrating power than UHF and 800mhz. In the case of high rises, the problem seem to increase in higher altitudes. That's unless you have towers that are higher than the building itself. But depending on what HF being used, that wouldn't change signal penetrating power very much. If you look at Cincinnati fire frequencies, they use 800mhz simplex frequencies in all highrises. This will only provide intercommunication with staff inside the building, and the possibility of the command post and but not with the dispatcher. And many departments have put repeater sites inside structures. Like Erlanger Hospital's 800mhz signal strengthening antennas throughout the building. While this is very effective, it can be very costly.
So as you can see, signals are as stubborn as parents visiting the dentist. And many have to be made to go, but with a cost. Every jurisdiction have a unique method to dealing with high rise responses. And Chattanooga's grateful, for our 800 towers are above the tallest building, thereby penetrating many of our highrises without problems. The basements of these structures are where we encounter problems with 800's. So if you have any more questions, please reply.
Thanks

It's a legitimate lawsuit. The World Trade Center buildings were not your typical high rise structures.

Many of the firefighters would have been in the stairwells and elevators (while the latter were still working), trying to reach or descend from the upper floors. The stairwells and elevators were located towards the center of the buildings, with steel reinforcement around them , inhibiting signal penetration.

(Remember the firefighters in the stairwell at the fourth floor of the south? tower when it collapsed ... they looked up, and could see sky. The steel around the stairwell saved their lives.)

I've copied a N.Y. Times article from 2002 to the end of my comments here, that discusses the disagreements among the public safety people about what actually went wrong with communications at the WTC.

Keep in mind that, prior to the WTC bombing in 1993, there was no fire repeaters at the WTC complex for communications. And, now, despite concerns about the communications system in place on 09/11, they are moving ahead with similar setups at other locations around NYC.

In my opinion, it's important that someone push to get the questions answered, whether it's the survivors of those who died, or someone else.

Jeff Multer
Fort Mill, S.C.

9/11 Tape Raised Added Questions on Radio Failures
By JIM DWYER and KEVIN FLYNN
New York Times - Nov 9, 2002

For much of the last year, New York City has said the devastating breakdown in fire communications at the World Trade Center was largely caused by the failure of an electronic device in the complex called a repeater, which was designed to boost radio transmissions in high rise buildings.

Now, however, the Port Authority of New York and New Jersey's analysis of its 78-minute tape of firefighter communications from

Sept. 11 flatly contradicts the city's version of what went wrong. It also raises questions about the thoroughness of the city's investigations into the worst loss of life any fire department has ever experienced ☐ 343 men.

If the Port Authority's position is correct, it raises the possibility that different factors ☐ failure of other equipment, design of communications consoles in the tower lobbies, or a simple mistake made at a moment of high stress ☐ might have accounted for the communications breakdowns. Many firefighters believe those breakdowns contributed to the department's staggering losses.

On the tape, which recorded transmissions as they were passed through the repeater, firefighters in the south tower can be heard speaking over their radios until the building collapses. Practically no communications are recorded from firefighters in the north tower, even though the same repeater served both of the towers.

Before the voices from the south tower are heard, a series of coded tones are captured on the tape, marking the moment that the radio repeater was turned on, a spokesman for the Port Authority said.

In the view of Port Authority officials, those transmissions show beyond any doubt that the repeater worked, contrary to the accounts given in an official study of the emergency response that has been endorsed by Mayor Michael R. Bloomberg and Fire Commissioner Nicholas Scoppetta.

Asked, then, what would account for the communications failures, a spokesman for the Port Authority, Greg Trevor, said, "You will have to put those questions to the Fire Department."

The tape is likely to be remembered as far more than a record of what went wrong. It contains the only permanently preserved voices of firefighters from the tower stairwells, including transmissions from the fire chief who climbed highest into the building. As the firefighters raced up the stairs of the south tower, and right until the final seconds, they can be heard calmly organizing help for injured civilians as high as the 78th floor.

"All right, Tommy," a firefighter from Ladder 15 is heard saying minutes before the collapse, "it's imperative that you try to get down to the lobby command post and get some people up to 40. We got injured people up here on 70. If you make it to the lobby command post, see if they can somehow get elevators past the 40th floor. We got injured people all the way up here."

A spokesman for the Fire Department, Francis X. Gribbon, said yesterday that the department still believed the machinery had failed in some way. "The system was tested in the lobby by two experienced chiefs who came to the conclusion that it was not functioning," he said, referring to the north tower.

That leaves unanswered one of the most stinging of all the questions about fire operations that day. Even though the north tower stood 29 minutes longer than the south tower, at least 121 firefighters did not escape from it. While chiefs in the north tower lobby issued orders to come down, they received no response.

The accounts of witnesses and firefighters who survived suggests that most of the men in the building simply did not know how much trouble they were in. Witnesses said that scores of firefighters, unaware of the peril, were resting on the 19th floor of the north tower during its final minutes. Some firefighters who managed to get out said they had no idea the other building had already fallen, and said that they thought that few of those who perished knew.

In February, even as the department was beginning a study of its Sept. 11 response, fire officials declined invitations to listen to the Port Authority's tape, which was recovered by Port Authority police officers from the rubble.

Not until the tape's existence was reported by The New York Times in July did fire officials decide to listen to it. Mr. Scoppetta has said that his aides did not tell him about the tape.

By then, the department's study of the Sept. 11 response was all but complete. The consulting firm that was conducting the study, McKinsey & Company, sent one of its associates to listen to the tape and to hear the analysis by the Port Authority, according to Carlos Kirjner, the McKinsey official who led the study.

In the end, Mr. Kirjner said that, even with the tape, it was not clear that the repeater had worked flawlessly throughout the buildings. No one could prudently ignore the perspective of senior fire chiefs, who had tested the system and believed it was not operating, he said.

"We came to the conclusion that arguing about the different versions was not a fruitful exercise," Mr. Kirjner said. So the report from McKinsey addressed the communications failure from the perspective of the fire chiefs, who believed the repeater did not work. Mr. Kirjner, who has a doctorate in electrical engineering and specializes in wireless communication, said his firm did not take a position on the repeater.

At the Port Authority, officials have long felt that the complaint about the failure of the repeater simply shifted the blame. While blame for the catastrophe is the subject of many lawsuits, Port Authority officials have resented the suggestion that their equipment failed.

The repeater was installed on the top floor of 5 World Trade Center after the first terrorist bombing in 1993. "During our radio coverage tests, we concluded that the system worked exceptionally well," Deputy Fire Commissioner Steven Gregory wrote in a 1994 letter to

Allen Reiss, the Port Authority official who oversaw the installation.

On Sept. 11, it did not seem to be working well to Battalion Chiefs Joseph Pfeifer and Orio Palmer, two of the first chiefs to respond. They tested their radios but could not hear each other, an effort that was recorded by the repeater tape.

One possible explanation, according to a Port Authority radio expert who reviewed the tape, is that the problems originated with a radio console that had been set up in the lobby by the Port Authority at the request of the Fire Department. The console resembled a telephone and served as a fire radio. The official suggested that a broken earpiece could have made it impossible for Chief Pfeifer to hear Chief Palmer. Another possible explanation is that the volume had been turned all the way down before they arrived.

In any event, Chief Pfeifer needed to establish communications quickly, so he turned to a backup repeater in his car, the tape makes clear. That repeater also did not appear to work. When the second plane hit, Chief Palmer was dispatched into the south tower with a senior chief, Donald Burns. There, both were able to speak over the trade center's repeater channel that had stymied Chief Palmer a few minutes earlier.

Chief Palmer took an elevator to the 40th or 41st floor, and then climbed on foot to the 78th floor within 30 minutes. As he ascended, he radioed reports on the conditions to the chief in the lobby and to other firefighters in the stairwells.

To Port Authority officials, those reports from the core of the building showed the repeater worked in the most difficult of environments.

Despite a public position that the repeater did not work, the city's top officials now want to replicate the trade center's system in high rises all over the city. Indeed, two weeks ago, Mr. Scoppetta sent a letter to the Port Authority saying that the mayor wanted the technical plans for the trade center's repeater system.

"The City of New York contemplates using the WTC Radio Repeater system as a model for future system development throughout the City," Mr. Scoppetta wrote.

Can anyone help me with v folder saving and loading. I have attempted to save to folder and to find out if it worked I attempted to load it to another Bank. It says it has completed the loading, but when I go to the bank it still has the old configuration. Is there any way to tell if it actually saved the to the folder or if it is not loading to the new bank. would appreciate any help. Thank you. Fred White

Fred,

If I understand your question, you have loaded a virtual scan folder into the working memory ... the settings your scanner uses to scan and search.

You then made some changes to one of the banks.

If you did nothing at all from this point, the changes would remain (under normal circumstances) through every occasion you turn the scanner on and off.

But, if you're not overwriting those changes to the original virtual scan folder, before reloading the scan folder to the scanner's working memory, those changes will disappear.

Topic: 2118 Message: 2118

I'll try to explain what I did.
I programed the 0 bank with Chattanooga freqs in the open mode.
I programed the 1 bank with Chattanooga freqs in the closed mode.
I go to palm Beach County in Fl. 2 or 3 times a year so I put their
Freqs in bank 5 and 6
I wanted to get them out of the way so I saved all Fla. into the same
numbered V-Folders. I couldn't figure if they actually went to the
folders or not, So to find out I tried to load one of them into the
number 0 bank and also to an empty bank (4). They didn't appear
there. It seems they will only load into the same bank they were
saved from. I hope you can understand this better.....Fred White

Fred,

I think I understand what you're "saying."

You were trying to save a couple of banks of information to a V folder, then recall the information from the V folder to the scanner.

You cannot save individual banks of information directly to a V folder. The V folders cannot be manipulated / changed without loading them into the working memory of the scanner.

You might want to load V folder number 5 into your scanner. This folder contains Palm Beach, West Palm Beach and other preprogrammed Florida banks. You can then make the changes you wish, such as clearing the Hillsborough bank (if you don't visit the west coast of Florida) to add something else of interest to you.

Keep in mind that you will lose the information you currently have loaded in the Pro 96, if you load V folder 5 ... UNLESS you overwrite another folder with your current programming.

For instance, V folder 8 is Illinois and Minnesota. If you have no plans to scan in those states, give a "name" to your current scanning file (the message that displays when you power-up your scanner). Then overwrite the working scanner file to a V folder you don't plan on using.

Now you've created a home for the file you will probably be using most of the time. Occasionally, you will want to update this V folder with the changes you have made to your working file. Simply overwrite the V folder to update it.

One other thing I might suggest for you is to buy software and a cable for the scanner. The cable is available through Radio Shack. I would recommend the Win96 software, written by Don Starr (http://www.starrsoft.com/software/win96/) . Software make the programming much easier, and enables you to do file manipulations you cannot do with the scanner, alone.

In case I haven't helped with your programming question, Fred, please feel free to e-mail me directly with a phone number and time this weekend that I can reach you. Just label the e-mail "Phone Fred," or something that will catch my attention and not be confused with spam.

Topic: 2118 Message: 2120

Thank you for setting me straight on the V Folder thing. I was confusing "working memory" with the bank which might be monitored at the time, and not all the banks. After reading your posting I went back to the manual and it all started to make sense.
As a matter of fact it is much better than I thought (ten folders covering ten banks vs. ten folders covering 100 banks.)I had talked to my local Radio Shack and all they know about PRO96 is that it is their newest scanner. I appreciate your help, and now I know where to go next time. Fred White

>> I appreciate your help, and now I know where to go next time.

The V folders are a very powerful feature, and one that I think the hobby market has overlooked, so far.

The ability to read Motorola trunked site I-Ds is also a nice feature.

I just wish we could get someone to incorporate the best features from both Uniden and GRE / Radio Shack into one scanner.

Feel free to e-mail if you have any questions I might help with, or need frequency information for the Charlotte / "Piedmont" area of N.C. / S.C.

That offer goes for anyone on this list.

10th Judicial DTF relies on the County or City that they are in. Usually
the one the one that they have the best relationship with, plus if they make
an arrest they have to transport the person to that county's jail in which
they were arrested in. DTF works Bradley, Monroe, and Polk county pretty
hard. From what I understand they don't work Mcminn very hard due to some
lack of cooperation issues with the local government and judges.

Thanks for the info, that's what I was thinking but wasn't for sure.
I live in McMinn county and hear the about once or twice on MCSO
primary. Also over New Years I heard two units I don't believe that
I have heard before- LD1 and LD2- MCSO primary, and I have no idea
what agency they work for. They were doing patrol work and checking
extra patrols, so they must be somehow connected to the sheriffs
office.

2124. 5 scanners-1 antenna??

Yahoo group: chattradio

From: Fred White
Topic: 2124 Message: 2124

I live in Ga. just south of Chattanoogain a pretty good reception area.
I have these scanners at the present time. BC350A, PRO2006, PRO95, PRO96 and a BC785D. I would like to hook all these up using 1 antenna. I am thinking about using a Scantenna from Grove with 50 ft coax. Is it possible to use a box of some sort to have all the scanners going at the same time on this antenna.
Is this the best way? would appreciate any and all recommendations.
By the way, I enjoy CHATTRADIO very much. There is just not enough people sending information,and asking questions, which I know is out there.
Thanks, Fred White

Topic: 2124 Message: 2125

You need a Stridsberg Multicoupler !!
I have one and they are great. They have great port-to-port isolation
so that the scanners local oscillators will not interfere with each other.
If you get the active model (recommended) it has a small amount of gain
to overcome the insertion loss, but it will not overload the front of the receiver.

Topic: 2129 Message: 2130

Doubt you'll hear anything usable on it, too... the license is still pending, and this will be part of ARINC's AviNet system, which is an iDEN system just like Nextel's. The new generation of digital scanners cannot monitor these systems.

Uniden BC296D, Uniden BC250D, Uniden BC796D, Uniden BC785D and Radio Shack PRO-96. So you have a choice. A digi card must be installed in the Uniden 250D and 785D for an extra cost. The Uniden BC296D and 796D has a card preinstalled. The Radio Shack PRO 96 does not have a card. These cards are the key to hearing APCO 25 transmissions.

Does anybody have a time range of when they might change over to the digital system? Also, how will it affect the coverage area and being able to receive the signal?

All I can say for now is, "Sometime between now and April, the system will be receiving some P25 comms. These comms will be strictly testing for a while before the first talkgroup is given. The CPD will not be the first to use the upgraded system, due to lack of radio equipment for now. However, CFD will be the first to use the upgrade, but will too be limited by lack of equipment. There will be 2 different talkgroup transmissions. 1 for analog equipment and 1 for digital equipment. Those who have analog equipment will not see a difference in comms. Those who have digital equipment, will. Communications between analog radios and digital radios will default to analog comms, but radios that are digital to digital will perform in digital. Analog radios will still hear the communications that are digital, but in analog mode. So the new system will be a phase in, rather than a true upgrade. But you can rest assure that it's underway.

2137. RE: [chattradio] Chattanooga Police

Yahoo group: chattradio
Date: 2004-01-12 20:06:46 UTC
From: Larry Van Horn
Topic: 2129 Message: 2137

Has anyone verified any of the technical details on the system at this point? If not I would caution you on making your digital scanner purchase until the known parameters on the new system are in fact verified. Not all the digi scanners below are created equal.

If you purchase the Uniden BC-296D/796D you will be good to go on any P-25 system nationwide. You would still not be able to monitor the proprietary non-APCO systems (i.e. MA/COM, IMBE ProVice, or the old Moto ASTRO VSELP).

If you purchase the RS Pro-96, you won't be able to monitor any of the newer 9600 baud CQPSK modulated systems or Johnson LTR trunk systems. This should probably be your chief concern at this point. Is CHA going 9600 baud CQPSK? If so, your only choice is one of the two above.

Finally you have the Uniden BC-250D/785D scanners. These will do only APCO-25 3600 baud systems (no 9600 baud period) with the optional card.

Until Matthew or someone over there can find out what sort of system is being installed, I would advise you to hold on making your purchase until some of the dust of construction settles.

Matthew do you or anyone else know what is going in over your way?

Seeing as how this is going to be a Motorola system,with both analog and P-25 digital, I feel pretty confident that it will be a 3600 baud system trackable by all of the current scanners.

Mark

Topic: 2139 Message: 2139

Does any one know how a UHF TV antenna turned verticle might work on Chattanooga PD? RadioShack has a 7 element with reflectors that looks like it might be close enough in frequency range to work. You can see it at Radioshack.com. Cat# 15-2160. Appreciate any help from you technical guys, or anyone who may have ideas on this. Thanks...Fred

2140. Re: [chattradio] Scanner antenna

Yahoo group: chattradio

From: John Creel
Topic: 2139 Message: 2140

If your looking for high-gain directional antenna in the 800 Mhz then I'd look at "cellular antenna" designed to work in remote areas. I believe you could get 6-8 element yagi for $50-60? from Doc's Communications in Chatt. The frequency roll-off from cheap coax might be a problem so using low loss double shielded cable designed for 800 Mhz band would be helpful if your cable run is long. A pre-amp might help here also.

2141. New Government Frequency!

Yahoo group: chattradio
Date: 2004-01-14 19:13:09 UTC
From: Larry Van Horn
Topic: 2141 Message: 2141

We have a new UHF frequency we have observed to our west (that means towards Chattanooga). ;-)

We have heard some voices and testing with a PL of 123.0. It is on one of the new 12.5 kHz splinters in the 406.1-420.0 MHz Fed land mobile services at 406.3875 MHz. It is somewhat choppy for me here in the office. How are you folks in CHA receiving it.
It is in a block in that range where we have seen USPS activity nationwide. Might be a new USPS UHF discrete or maybe a trunk! (I hope).
Pplease let me know what you guys hear on this one.

73 and good hunting,

2144. New UHF

Yahoo group: chattradio
Date: 2004-01-16 15:17:41 UTC
From: Larry Van Horn
Topic: 2144 Message: 2144

I have uncovered a new active Fed UHF freq - 415.575 MHz (136.5 PL). I ebelieve this might be a USFS link in Tennessee. I have heard the players on this one talking about the Westmoreland tract and also mentioning Clarksville-Athens. At this point I have ruled out Georgia (we reception in the direction of Athens GA is marginal at best due to blockage and Clarksville/Westmoreland GA is down south quite a bit.

I am trying to get some bearing on this to verify whether this is TN or GA. Any additional reception info would be appreciated from folks to the west. Also for folks in CHA 167.3125 is very active in the clear with an operation as I type.

2160. Re: McMinn County Channels

Yahoo group: chattradio
Date: 2004-01-22 17:31:25 UTC
From: Robert
Topic: 2029 Message: 2160

Just to pass on a few updates.

155.4900 is McMinn 3.

155.5950 is McMinn 28 and Athens PD 5 to talk to the Justice Center.

453.9250 is used for county schools and public works. It is also rural fire channel 3. They used this during the train derailment, very weak singal on 453.5750 in Calhoun.

Seems like wreckers are from 470 to 499.

Athens FD are 200's.

And for a few days last month they were Athens dispatch "Athens" not "Control One".

A couple of law enforcment units I heard over the holiday were LD1 and LD2, havn't heard them since, but I don't listen much during the daytime.

I am still working on the Rural Fire and Rescue information, hopefully I will have it soon.

Robert

Paul wrote:

Hey Paul, Fred and all,

The frequency is actually 142.200 not 142.205 MHz. The frequencies are spaced 12.5 kHz in the 138-144 MHz band. Nearly all of the old weird splits in this band were done away with by DoD in 1986 by a department wide instruction madating then 25 kHz and now 12.5 kHz. And while most of the activity in this band is FM because it is a land mobile service band for the US military, there are air-to-air comms you will encounter here and it is in the AM mode. For now these A2A comms will only be found on 25 kHz channels (xxx.x25, xxx.50, xxx.x75), while the NFM can be on either 12.5 or 25 kHz spacing. There is quite a bit of activity here in the southeast by mil aircraft in the 138-144 and 148-150.8 bands.

Here is some recent stuff from my working files. These two bands and the 406.1-420 MHz ranges are fun to search. Since I purchased the 796D earlier in the motnh I have been doing almost continuous chain searches through 138-144 (both AM-25 KHz spacing and NFM-12.5 kHz spacing), 148-150.8 (both AM-25 KHz spacing and NFM-12.5 kHz spacing), 162-174 (NFM-12.5 kHz) and 406.1-420 MHz (NFM-12.5 kHz). When you get bored with that day to day grind of PS comms, try branching out into the feds bands and work them for awhile. You might be pleasantly surprised what you find doing searches on these frequencies.

2162. Wifi Despair!

Yahoo group: chattradio
Date: 2004-01-24 01:07:29 UTC
From: Richard L. Elliston
Topic: 2162 Message: 2162

Can anyone give me the link for a site that provides some instructions on setting up a PDA to access Wifi hotspots? I'm using a hp Pocket PC h2215 with an Ambicom WL1100C-CF wifi card. Although Ambicom tech support was able to provide the correct driver, which was NOT on the included disk, the setup information they have provided is absolutely useless, telling me to access menus, etc. that simply do not exist.

From: Larry Van Horn
Topic: 2167 Message: 2168

If, as some have pointed out, the new Chatt digi system is an Motoola ASTRO 3600 baud system, you will not have to worry about modulation type. If they are, in fact, a mixed mode system then that also points to a 3600 baud digi system. If it is an APCO-25 exclusive, then that would be a 9600 baud digi system which uses two different digital modulation schemes:

C4FM (most common in use) and a newer protocol that will be widely used with narrowband digital technology CQPSK.

You will find a very nice description on trunkedradio.net at http://www.trunkedradio.net/modules.php?name=Content&pa=showpage&pid=3

There are limited locations in the US which use the 9600 baud CQPSK and based on an earlier post by Mark McDougal and Christopher Haggard to this group it looks like this will not be a 9600 baud system since there are indications it will be mixed mode (analog/digital). In the final analysis, I am from Missouri and will wait until the system comes online before ANYONE can be sure. But don't trust me on these matters, the people in Austin were told they were getting a mixed mode system. Turns out to be one of the few pure 9600 baud APCO-25 systems in the country! ;-)

I tend to be cautious with these sort of things when an expenditure of over $500 is involved. No sense in ticking off the war department.

2169. Murphy PD switch

Yahoo group: chattradio
Date: 2004-02-02 15:26:02 UTC
From: Larry Van Horn
Topic: 2169 Message: 2169

Looks like the Murphy PD has switched their dispatch to their new 156 MHz repeater from their old 158.790 simplex.

Here is the new alignment:

Murphy PD 156.2175/153.9875 186.2 Hz PD Dispatch
158.790 simplex 151.4 Hz PD Car-to-Car

Also we might have found a new repeater being used by the SO, but I need to work on that one for a bit longer.

More to follow,

73 and good hunting,

;-)

I do agree with you on the distrust toward the trunking mode issue. However, while looking at the present layout of the many agencies using the system, a large amount of analog radios are still in use. With only one agency using the digital system at a time, 3600 baud would be the only way this upgrade will work. You and many others know how expensive this upgrade will be, and that's just for the infrastructure. The radios are another matter altogether.

The city of Chattanooga will more than likely be the first to use the system, with the Chattanooga Fire Department being the first target agency. But CFD only have the P25 capable radios in only 2 stations at present. Everyone else, including the administrative staff, continues to carry the MTS2000 and 5000. And the county's budget is another whole ball of wax, regarding the volunteer departments. Over the past year, many volunteers are starting to utilize the system, due to "hand me down" analog portables. So if the system isn't being built as a "mixed mode" system, then a great deal of Chattanooga-Hamilton County folk must prepare for a large tax increase, to pay for the purchase of 9600 baud capable radios for mobiles and portables of all the agencies using the Chattanoga-Hamilton County TRS. So do you see why the 3600 baud system would be more suffice. The money just isn't there to upgrade to a complete digital system. It has to be done slowly, to get it's use from everyone.
Otherwise, the vollies, many public service agencies and possibly some public safety agencies will return to the old bricks and back comes the old analog VHF-Lo, VHF-Hi and UHF freqs.

You should be able to pick up their Hinch Mountain repeater no problem:
462.950.

They also have a repeater on Signal Mountain on 463.050.

For the other LifeForce repeaters, see
http://www.scanchattanooga.com/hospitals.html .

2175. SE TN Human Resources Agency

Yahoo group: chattradio
Date: 2004-02-04 18:37:38 UTC
From: Larry Van Horn
Topic: 2175 Message: 2175

After a considerable amount of monitoring I have finally nailed down 2 of the 3 repeaters for the Southeast Tennessee Human Resources Agency under the callsign WPVT588.

Here are the particulars as I know them right now on these repeaters.

Southeast Tennessee Human Resource Agency
151.1975/153.9875 Transport dispatch [Coalmont/Grundy Co]
Repeater serves Coffee, Franklin, Grundy, Marion and Warren counties.

154.9875/155.9925 DCS 032 Transport dispatch [Dunlap/Sequatchie Co]
Repeater serves Bledsoe, Grundy, Hamilton, Marion, Rhea and Sequatchie counties.

158.745/153.845 DCS 032 Transport dispatch [Benton/Polk Co]
Repeater serves Bradley, Hamilton, McMinn, Meigs, Monroe, Polk and Rhea counties

As of right now I have not heard the 151.1975 repeater here in B-town and would appreciate any help from someone on the list closer to confirm its presence and if it also uses DCS 032.

73 all and good hunting,

Ok guys, I know you guys don't normally talk about CB on in this group (understandably), but I was wondering why the FCC doesn't allow FM or sub-audible tones to be used in the 27MHz CB band? Wouldn't that help to keep a lot of the static and undesireable weak signals and most skip out of a radio, promoting the FCC's intention that it be used for local communications only? I hear that European countries allow FM but I'm not sure about the tones though (USA allows both on 10 meters). I'm not a CB'er myself, I was just wondering if there was a logical reason. -Glen kd4ldi

The frequency is 451.9375 Mhz, apparently simplex only.
I've confirmed it from the parking lot. Could not find the expected repeater, but when you hear their radios inside the facility, it sounds like they are using a repeater. Callsign is WPHG717. Take a look at the FCC database for more info. Hope this helps!

(P.S. -- my visit to the facility was voluntary, very brief and for professional reasons, only.)

2180. Is Mall Security Paranoid?

Yahoo group: chattradio
Date: 2004-02-21 21:40:12 UTC
From: Jonathan Guy
Topic: 2180 Message: 2180

The Chattanooga Fire Department was dispatched to investigate a loud boom at Hamilton Place Mall. I wasn't too far away and thought there might be a nice opportunity for a little night photography of the fire equipment. Quint 8 and Engine 21 were still on the scene and had canceled the other companies when I arrived.

I got the camera and tripod out, took 10 or 12 photos while adjusting the exposure and noticed a NewsChannel9 car pull up. Mall security comes rushing over telling me that they don't allow photos, it is private property. I asked where THAT sign was posted and she proceeds to point toward the highway entrances and say "at all the entrances". Anybody ever notice one of those signs before? The female that appeared to be in charge was becoming agitated because I wasn't running away in terror and the male that was with her exclaimed, "I'll go deal with Channel9!" I didn't see or hear the exchange between the other guard and the photographer from Channel9, but after another picture or two I had to leave for work anyway. I noticed Channel9 walking back to his car and leaving, no way he ever had time to get any video. Security's claim was that since the person employeed by Hamilton Place to deal with media questions wasn't working, no one can take a photograph on mall property. Just in case you're wondering, I don't work for the media. I just enjoy photography.

What does Hamilton Place have to hide? There were a few other people standing around spectating that didn't have a camera, nothing was said to them. Scary isn't it?

Btw, I looked as I left and there weren't any signs to be found at any roadway entrance.

Here's a photo of Quint 8 sitting in front of the mall entrance. I uploaded it to the Chattradio photos area so you will need to log in with your username and password to gain access. I still need a little more practice with the night photography, but hopefully you will enjoy it anyway. :)

Welcome to the world of news! Years ago they had a person killed in
their parking lot after leaving the inside of the mall. It brought a
wealth of attention for a couple of weeks. They beefed up security,
added a bunch of cameras, and roving security guards. They also added
to the number of "Off-Duty" cops on site. Then many years later theft,
harrasement, graffitti, and the like caused many shoppers to complain
about the kids hanging out at the mall and being disruptive. They
closed the mall off to kids under 18 after 6pm without an adult.
All that said Hamilton Place is still one of the most paranoid
companies I've ever delt with. When they have something they want
covered they "beg" you to come and when they don't ..... stay off the
property without calling PR first. I've been working (working at TV9)
on these guys for years and they are less paranoid than they used to be
but the word hasn't filtered down to all the "Rent-A-Cops" running
security yet. I think it's a corporate decision and the corporation has
it's home offices across from the mall now.
Property wise they own almost everything around there so we shoot
from a city street or the hill above the mall sometimes. Being in an
unmarked car makes them even more paranoid that your from CBS 60 mins or
TIME, but we sometimes resort to that guise to just find out whats going on.

That's because CPD dispatches to the address, not the name of the business. 2100 Hamilton Place Blvd. is the proper street address for the mall. The name 'Hamilton Place' may not always go out because everyone dispatching or responding knows that address by heart.

School buses, firemen, cops get new radios
By: BEN BENTON Staff Writer
Source: The Daily Post-Athenian
02-24-2004

ETOWAH ☐ In order to maintain the city's communications, city commissioners approved a $21,000 purchase Monday night of handheld and portable radios for police, firefighters, school bus drivers and emergency personnel.

The new radios replace some of the city's older equipment, Communications Director Jaci Cornell told commissioners.

According to Cornell, the Police Department needs 12 portable radios and six mobile radios, the Fire Department needs three portable radios and two mobile radios, Etowah City School needs two portable radios and the city's Emergency Operations Committee needs two portable radios.

ECS Principal Joe McBrayer said the school system needs radios on buses to make sure drivers have a way to contact emergency officials if the need arises.

McBrayer said radios would eliminate the need to relay information through the school to emergency personnel, which takes considerable time.

"We bus two-thirds of the school population," McBrayer said. "This would allow the bus drivers to have direct communications with police."

Police Chief June Parham said the current state of the city's communication is "terrible." Parham said she was working a traffic accident within a few blocks of the Communications Center and had very poor reception.

"I think we're in a state of emergency," Parham said.

Parham said the Federal Communications Commission has issued the city a new frequency which is expected to improve communications significantly.

City Manager John Solsbee pointed out to commissioners that school and Emergency Operations officials weren't originally included in the radio purchase but those bodies wanted to purchase radios with their

own funds.

McBrayer said he might not have the funding specifically earmarked in the current year's budget, but he said he knew he would have funds to cover the school's portion in the coming new school budget.

Cornell said the cost per bus is a little over $500 per bus.

McBrayer said Title 5 federal funds could probably fund the purchase.

According to documents included in the Commission's agenda, the total cost of the radios and equipment needed at the Communications Center to update outmoded equipment stands at $21,042.

Commissioners present, Bernard Lipps, Ted Watson, Jody Blair and Harold "Creepy" Cox, voted in favor of the purchase. Mayor Joe Moates was absent.

Following the vote, Parham informed commissioners Etowah's EOC was likely to be used as a model for other similar offices. She noted the town's EOC was unique in that it is a free-standing, civic body, not part of the EOC which exists as a countywide entity.

2188. New Trunk System

Yahoo group: chattradio
Date: 2004-02-27 15:58:27 UTC
From: Larry Van Horn
Topic: 2188 Message: 2188

My magic 12.5 kHz chain searching on the BC-796D has struck again and helped me locate a new LTR TRS over in Polk County (Benton), Tennessee.

Here are the details:
WPRT262 Communications & Electronics Inc YG LTR Trunk System - Benton (Polk County), TN
Frequencies: LCN01 451.8375 LCN02 451.9875 LCN03 452.2375 LCN04 452.4355
LCN05 461.7625 LCN06 461.9875 LCN07 463.7375 LCN08 464.8625
So far LCN01/03/04 have been the most active home channels. I have seen nothing on the other five but running various combinations in other banks indicates this is the proper LCN loadout.

Talkgroups so far (all area code 0):
0-01-007 Home channel 451.8375 MHz: Unknown user/usage (Grover talking abt a dead calf & vet)
0-03-002 Home channel 452.2375 MHz:Unknown user/usage (Concrete or rock company)
0-04-001 Home channel 452.4375 MHz: Unknown user/usage

From: firemedic2150
Topic: 2191 Message: 2191

For those of you here in the east, I have received some information from a good source that the Memphis/Shelby county system is now under construction. Motorola hopes to have build out done in the next 10 months. They hope to be up and running, issuing radio's by next summer. This will put all of the major cities under APCO-25 Motorola ASTRO systems, except for Knoxville who is headed that way I think.

Mark

2192. FCC may let Nextel swap airwaves

Yahoo group: chattradio
Date: 2004-03-17 03:17:53 UTC
From: shooter2jim
Topic: 2192 Message: 2192

By Paul Davidson, USA TODAY

Federal regulators are leaning toward approval of a controversial plan to swap airwaves to reduce cell phone interference with police and fire radio systems across the country.
The development is significant because the interference has hampered emergency response systems in dozens of cities since the mid-1990s, including Denver, Miami, San Diego and Seattle.

A recommendation by the Federal Communications' staff that broadly endorses the plan by Nextel Communications (NXTL) and public safety officials was sent to the commissioners Tuesday, FCC officials told USA TODAY.

But the proposal would require Nextel ☐ which has been causing most of the interference ☐ to pay as much as several billion dollars for the new spectrum it receives.

Nextel says the value of its airwaves would actually drop by $1 billion under the proposed trade. Asked if the company would be willing to pay for the airwaves, Nextel's Larry Krevor, said, "We'd have to look at the numbers."

The interference occurs because frequencies used by public safety agencies, Nextel and other mobile radio services are interlaced. Nextel's numerous antenna towers sometimes overwhelm public safety radios, causing "dead spots" in coverage.

Nextel in late 2001 proposed swapping airwaves so that it, public safety and the private carriers each would get contiguous, static-free airwaves. The company also agreed to pay $850 million toward costs for public safety agencies and the private carriers to reprogram equipment or buy new gear.

But other cell phone carriers say the plan, by involving several spectrum bands, unfairly gives Nextel prime contiguous airwaves that, by law, should be sold at auction by the FCC for billions of dollars. Verizon Wireless says the airwaves are worth about $7 billion. Research firm Legg Mason puts their value at about $1 billion.

In a recent letter to FCC Chairman Michael Powell, 23 lawmakers opposed the plan, saying any swap should be limited to the band where the interference is occurring. Nextel says that would leave too much congestion in that band. While a more limited swap is still an option, Legg Mason says four of the five commissioners appear to support the broader trade.

Critics also say that plan would disrupt half the nation's 2,200 public safety agencies, even though interference is isolated. It could take several years to complete.

The cell phone carriers have proposed an alternative plan that involves equipment upgrades and retuning antennas and radios. Nextel says that won't fix the underlying problem.

APD Main 151.1000
EFD 154.2350
Fire Mutual Aid 154.2800
AFD 154.3400
Law Mutual Aid 154.7550
State EMS 155.2050 Dispatch to ambulance and
ambulance to ambulance. Life Star and Life Force in McMinn County

EMS Trauma 155.2800
EMS HEAR 155.3400 Ambulance to hospital
Intercity 155.3700 Dispatch to THP Chattanooga,
Bradley County, and Meigs County to name a few.
APD 155.4150 I think this is used as an EMA
channel.

MCSD 3 155.4900 Car to car. Also used as the
justice center channel.

NPD/MCSD 12 155.5200 Niota car to car, very seldom used. I get
a lot of inference on this channel that I believe is from Bradley
County.

MCSD 28 155.5950 Car to Car. Used more than 12 but
less than 3. Possibly a supervisor channel

EPD Main 155.6550
MCSD Main 155.7000
Rural Fire/Rescue 453.5750 Life Star and Life Force in McMinn
County. Also, McMinn County Haz-Mat

Public Works/Schools 453.9250
AUB 855.4875 Motorola trunked system
AUB 856.7375 Motorola trunked system
AUB 857.7375 Motorola trunked system
AUB 858.7375 Motorola trunked system

Athens Control One dispatches APD and AFD.
McMinn Control One dispatches EMS, Rural Fire/Rescue, MCSD, Niota PD,
Englewood PD, Calhoun PD and McMinn County Haz-Mat.
Etowah Control Three EPD and EFD. I don't receive this frequency
very well. Most of the time I have it locked out.

Units
100- Athens PD
200- Athens FD???
400-469 McMinn County Sheriff's Department
470-499 Wreckers

500- Etowah PD
600- Englewood PD
700- Niota PD
800- Calhoun PD

Subject: [chattradio] Re: Sweetwater/Athens/Madisonville/Loudon

APD Main 151.1000
EFD 154.2350
Fire Mutual Aid 154.2800
AFD 154.3400
Law Mutual Aid 154.7550
State EMS 155.2050 Dispatch to ambulance and
ambulance to ambulance. Life Star and Life Force in McMinn County

EMS Trauma 155.2800
EMS HEAR 155.3400 Ambulance to hospital
Intercity 155.3700 Dispatch to THP Chattanooga,
Bradley County, and Meigs County to name a few.
APD 155.4150 I think this is used as an EMA
channel.

MCSD 3 155.4900 Car to car. Also used as the
justice center channel.

NPD/MCSD 12 155.5200 Niota car to car, very seldom used. I get
a lot of inference on this channel that I believe is from Bradley
County.

MCSD 28 155.5950 Car to Car. Used more than 12 but
less than 3. Possibly a supervisor channel

EPD Main 155.6550
MCSD Main 155.7000
Rural Fire/Rescue 453.5750 Life Star and Life Force in McMinn
County. Also, McMinn County Haz-Mat

Public Works/Schools 453.9250
AUB 855.4875 Motorola trunked system
AUB 856.7375 Motorola trunked system
AUB 857.7375 Motorola trunked system
AUB 858.7375 Motorola trunked system

Athens Control One dispatches APD and AFD.
McMinn Control One dispatches EMS, Rural Fire/Rescue, MCSD, Niota PD,
Englewood PD, Calhoun PD and McMinn County Haz-Mat.
Etowah Control Three EPD and EFD. I don't receive this frequency
very well. Most of the time I have it locked out.

Units
100- Athens PD
200- Athens FD???
400-469 McMinn County Sheriff's Department
470-499 Wreckers
500- Etowah PD
600- Englewood PD
700- Niota PD
800- Calhoun PD

Topic: 2194 Message: 2200

I live in Athens, I listen to the every few days so they are correct. 155.7000 is the sheriffs departments main channel. It is a very strong signal. The tower is up on Star mountain, and I can pick it up in Knoxville and Chattanooga. If you are having problems picking it up it might be your scanner or antenna. What type of scanner and antenna do you have?

Robert

APD Main- Athens Police Department Primary Dispatch
MCSD Main- McMinn County Sheriffs Department Primary Dispatch
EPD- Etowah Police Department
AFD- Athens Fire Department
EFD- Etowah Fire Deparment

2202. Re: Sweetwater/Athens/Madisonville/Loudon

Yahoo group: chattradio
Date: 2004-03-18 19:10:14 UTC
From: Robert
Topic: 2194 Message: 2202

I know that the info over at www.scanchattnooga.com is for the most correct.

155.3100 is Monroe County Sheriff's Department Primary
155.7900 is Sweetwater Police Department Primary
Ect,Ect...
What Matthew has on scan chattanooga is what I have programed into my scanner for Monroe county and i pickup everything when I am up there.

The only thing you might pick up with a trunking scanner is Athens utlity board. So unless you are going up to Knoxville or down to chattanooga you will not need it. But if you do, be warned that Chattnooga is going to a digital system soon, and I think Knoxville is planning on it. You will have to get a digital scanner to pick those systems up, $500+.

You scanner only has 50 channels in one bank, which can make it difficult to listen to what you want to. If you only wanted to listen to Monroe county you will have to lock out every other channel. If you have more than one back you could just turn off the McMinn and Loudon banks. I have a Pro-95 with 100 channels in 10 back for a total of 1000 channels. I wish this had been 50 channels in 20 banks.

As for you antenna it sounds like the factory antenna. I use a mag mount antenna from radioshack(part #20-032). With this antenna I can us it at home or on the road. With this antenna I can pick up McMinn, Monroe, Bradley, Polk, Meigs, and a few others.

That means you are picking up some interference from something
electrical. Try an outside antenna or relocating your scanner. Both of
those are valid frequencies.

First of all Etowah Primary is 155.6550 not 155.6500. I live in
Athens and I very rarely pick up Etowah PD. Looking at the FCC
Report the EPD primary 155.655 tower is about 400 feet lower that the
MCSD Primary 155.7000 tower.

I had to drive to Loudon County and back yesterday, I noticed the humming/open carrier while I was in the fog zone around the 33-36mm on 155.655. No idea what it was, but maybe interference from fog zone equipment?

Wonkiee, The way I understand it, Moscad is a digital transmitting system that will allow fire trucks as well as the dispatcher to open and close fire station doors after the trucks are gone as well as open them when they return. This allows them to operate without leaving someone there to watch the store (so to speak) while they are gone. I have heard firemen ask the dispatcher to close door on station so & so. I don't think there is any voice transmission involved. Fred

MOSCAD is a proprietary Motorola format. There wouldn't be any useful information in the data stream for your use even if you could see it. It just sets off the alarm bells in the Fire Hall and turns on a couple of lights.

You could look on www.scanchattanooga.com for TDOT under the state of TN listing.

Try 47.3600 W/141.3 PL You would find what you are looking for.

Mark

Topic: 2221 Message: 2221

I copied this from another yahoo group, with permission from the member who posted it. Thought it might be of interest to this group.
Fred

Broadband over Power Lines is going to really hurt scanners. We will be drowning in radio interference. Here is a great article from the ARRL and make sure you look at the video. I already wrote my senator to call for hearings. I read an article from Japan that trialed BPL and they said you could not hear any Shortwave or HAM radio and scanners were worthless all the way upto 250 MHZ and had major interference through 440 MHZ. The AM band was also affected and Japan stopped using BPL all together but now the United States is going to try it. Your entire house wiring is going to being radiating lots of RF.

http://www.arrl.org/tis/info/HTML/plc/

Please write your Senator and House Rep.

2222. Hamilton County TRS problem?

Yahoo group: chattradio
Date: 2004-04-16 18:30:45 UTC
From: Jay
Topic: 2222 Message: 2222

I have been experiencing intermittant problems receiving the TRS system. This has happened on both my scanners yesterday and today (pro-2067 & BC245XLT). I turned the 245 on yesterday and it went to scanning in the trunked mode. No signals at all. It was scanning fine - just acted like no one was talking - no way the whole system is totally quiet. I took it off trunked mode and was picking up transmissions fine - put it back in trunked mode and nothing again. A few hours later I turn it on and everything works perfect! No problems at all. Today, I turn on the pro-2067 and the same thing - the whole system is quiet. Isd anyone else having the same problems? I have ruled out that I have a radio problem since it is happening on 2 seperate radios. Anyone have any clue what is going on? Thanks.

I am still in the learning curve on trunking and have only recent experience on wich to draw...The symptoms you describe are consistent with loss of control channel, such as a new freq not yet pg'd into radio. I am not able to monitor anyhting in 800 in Se Tenn from my location E of Knoxville, but I would be interested in how you finally resolve this problem.
Good listening.

2224. Trunk System Changes

Yahoo group: chattradio
Date: 2004-04-17 12:19:37 UTC
From: Matthew Sadler
Topic: 2224 Message: 2224

Some of you have obviously noticed the new control channel which has popped up on the city's trunking system frequencies at 860.9625.

There is a really neat piece of free software out there called Trunker. Trunker lets you monitor the trunk system's control channel and shows you all of the different frequencies, the active talkgroups and active radio IDs. It'll also give you a few details and clues about the system which can help you figure out what "flavor" of Motorola trunking you're dealing with.

Monitoring the "old" system data channel at 858.2125, it shows "Type II" in the top left.

Monitoring the "new" system data channel at 860.9625, it shows "Type II NetWkd" in the same place. It also has a < 1> off to the side where on the "old" system there is nothing, which I would think is the cell number. Not sure; up until now, I guess, we've not had any SmartZone systems on the air here.

This would lead me to believe that the new data channel that folks are picking up is part of the new SmartZone system being placed on the air.

From: j_multer
Topic: 2222 Message: 2225

>> I have been experiencing intermittant problems receiving the TRS system.

As Thad pointed out, you may not be receiving the control channel ... possibly because the control channel has switched to a frequency you don't have programmed into the bank.

Another possibility is that the scanner is locking down on the control channel of another system, which can easily happen during overnight / morning tropo conditions. If none of the programmed talkgroup I-Ds are used by the "other" system, you won't hear anything in scan mode.

Keep in mind that the scanners will search for the first detectable control frequency programmed in a bank. In tropo conditions, an out-of-area system sharing some of the same frequencies as Hamilton County may be strong enough to capture trunking mode. Always program the primary and secondary control frequencies of your target trunked system into the first couple of channel slots of a bank.

Next time your problem occurs, go into "manual" mode, and step through the bank channels to listen for the control channel. Whether or not you can hear it will direct you to the next step in problem-solving.

Another possibility to consider is interference degrading reception of the control channel by your scanners. Any new PCS or Nextel towers in your area ? Have you inspected your antenna coax, connectors and antenna recently for problems that could be reducing signal strength on 800 MHz ?

2226. Forwarded message from John Pless

Yahoo group: chattradio
Date: 2004-04-18 20:13:16 UTC
From: jim knight
Topic: 2226 Message: 2226

Hey Jim and Jay:
Can either of you forward this to the Chattradio yahoo group? I tried, but it keeps returning. It explains the change in the Chatt/HamCo trunked system.
Thanks!
John

It's the upgrade to the new Motorola Astro SmartZone Analog/Digital 800Mhz system.
You can find plenty of explanations about Motorola SmartZone on the web. Try radioreference.com. It's Lindsay Blanton's excellent trunking page.
In a nutshell, instead of having one big system simulcast from four tower sites that was called a SmartNet system, SmartZone is actually a system made up of two or more "sub-systems," if you will. Still four towers.
But now, there will be a data control channel for each "zone." The zones may be arranged by geographic location, or other parameters.
Currently, the system is working off of one data channel, 858.2125, and six other repeaters used for voice traffic. Used to have 11 or 12 repeaters for voice.
The new channel, 860.9625, will control another group of repeaters. Exactly which ones, and in what area of the county that "sub-system" will operate on remains to be seen.
So for now, to make Trunktrackers work properly, just lock out the new data channel 860.9625. Otherwise it won't track properly, as I and others have noticed. That data stream doesn't seem to be controlling anything yet, but wigs-out trunktrackers.
You may wind up having to put the trunked system in two banks on your trackers, with each bank dedicated to one "zone." Who knows, that's how it works best on the Savannah Georgia SmartZone system.
Another note. The previous SmartNet system gave it's FCC mandated Morse Code ID occasionally on 856.2125. Now, it also sends a Morse Code ID on 857.4625. That's probably the ID for the second "zone" and it's associated repeaters.
Since only six voice repeaters seem to be in use this weekend, it will be intersting to see what happens when the system gets loaded down Monday with all the public works/general government services getting active. Maybe the new "zone" kicks in?
Also, the data streams you hear on 856.9625 and 857.9625 are for Chattanooga Police mobile laptops. You can lock these out, because these are dedicated for this purpose. Also, 858.9625 is telemetry for the sewer system and it's remote pump stations. Lock it out too.
Of course, all this may change once the whole SmartZone system is fully operational and we see what happens.
Any folks with "trunker" please forward any new frequencies or info you

see pop up. One person found a 863Mhz frequency show up on trunker, and you might see a new digital mode talkgroup or two pop up, like the radio shop. Yes, services will migrate to digital mode in the coming months and years. You'll need digital capable Trunktrackers that ain't cheap, and as Jimmy Swaggert says, pass the loot, brother!

Cheers!

2228. NOAA Weather Radio Transmitter Relocation

Yahoo group: chattradio
Date: 2004-04-25 23:34:27 UTC
From: Matthew Sadler
Topic: 2228 Message: 2228

The National Weather Service is running an announcement stating that WXK48 on 162.550 MHz (the Chattanooga transmitter) will be off the air intermittently during the last week of April (this week) as they relocate the transmitter "a few miles to the east northeast and slightly higher in elevation."

Not sure exactly where it is going, but I would think up towards Falling Water and off of the KZ-106 tower.

Topic: 2229 Message: 2229

As of 1630 this date, talkgroup 21008 (Chattanooga Sanitation 1) was using the Smartzone system that has the new control channel. The transmissions are not digital and appears to be in use on a fulltime basis. So I know it's too early to speculate, but it does look like the Chattanooga-Hamilton Astro-P25 system will be seperated with Public Safety using one of the control channels and Public Service using the other. This setup is very similar to our neighboring metropolis, Nashville. I can't say for certain that this is the case, for our radio shop could be using Chattanooga Public Works as a testing group at present. But be on the lookout for more talkgroups to appear.

2230. Another commercial talkgroup ID'd!

From: Richard L. Elliston
Topic: 2224 Message: 2231

Do the changes include a change in transmitter power or location?
I'm monitoring the Chattanooga TRS with reasonable clarity here in
Charleston with a Pro 94 and the 800 mHz rubber duck that RS sells.
In the past, I've been able to monitor the system conventionally,
without trunk tracking. Never been able to reliably lock onto the
old control channel. Pro 94 is definitely locking onto the new
control channel. Haven't checked this yet with Pro 92 or Pro 91, but
I expect good results with the Pro 91 since it has the most sensitive
receiver among my toys.

If they go to a geographic zone system there might be a change in antennas resulting in better signal distribution for a given area ... ie cell site zones. They alsocould have changed power output settings since most of that is programmable by the radio shop. We noticed better coverage to the south towards Lafayette as well. With the addition of new customers utilizing the system range expansion would be a must, as would new sites to provide coverage for those areas. Walker Co. Sheriff and Catoosa Co. Sheriffs are rumored to be considering the system.

2238. EPB

Yahoo group: chattradio
Date: 2004-05-19 16:25:41 UTC
From: Matthew Sadler
Topic: 2238 Message: 2238

The EPB has been playing with our electrical supply here at ScanChattanooga.Com this morning, causing me to listen to find out what the problem is.

So, I'm not hearing anything. Expecting the worse, I start to wonder if they've gone to Nextel like the EPB Telecom folks.

Fear not, they have instead changed from the 162.2 Hz PL tone on all repeaters to different DPL codes on each frequency:

451.050 / D114
451.225 / D205
451.375 / ?
451.675 / D411
452.150 / ?
452.450 / D606

I haven't found the codes for 451.375 or 452.150 yet because they haven't used those repeaters, but I would speculate that they are D306 and D503 respectively (because all of the DPLs that I've confirmed are the first in that hundreds-group).

And, our outage was caused by rotten crossarms letting two 46 kV power circuits get together. Not good.

Just in case any of you are home right now the T-Bird Diamond is passing over CHA on their way to Charleston for the weekend airshow. They have been chatting up a storn on 143.850 AM about the last time they were at an airshow in CHA. That conversation is not repeatable over the newsgroup.

Have fun

2244. Wideband Up

Yahoo group: chattradio
Date: 2004-05-21 13:15:29 UTC
From: Larry Van Horn
Topic: 2244 Message: 2244

At 1315 UTC I have wideband FM signals from AF1 and ? On 230.900 and 300.400 MHz. Not sure if the 300.400 is the GEP at Signal Mtn or another aircraft. 230.9 is definitely the aircraft and probably AF1 enroute Louisiana. Wish I was at home with the R-7100 to explore the SSB MUX either side of the order wire FM signal on 230.9. Might be some interesting listening in their.

One of these days I would like to work with one of you guys in CHA who has milair capability and off during the day to explore the wideband signals coming from Signal Mountain. If someone is interested, please contact me via larry@... email address.

73 all and good hunting.

Here are a few photos from the railroad excusions in the Hiwassee River Gorge. TVRM, the owner of the passenger equipment, and the operator of the trips uses 160.425 for coordination during the trips.

The morning started out with beautiful blue skies, and the sun coming up. Clouds would begin to overtake us during the second run of the day.

NCStL 710 on the point of the northbound crossing the bridge at Reliance, TN. The nearly calm water provides a nice reflection of the train.
http://www.railpictures.net/viewphoto.php?id=62827

NCStL 710 crosses the curved Gee Creek bridge and enters a tunnel of trees.
http://www.railpictures.net/viewphoto.php?id=62829

The entire train is seen in this view as it crosses the bridge at Reliance.
http://www.railpictures.net/viewphoto.php?id=62831

CCKY 102 passes the switch stand as the train approaches Reliance.
http://www.railpictures.net/viewphoto.php?id=62828

After watching the clouds continuing to roll in, and the skies to our south become darker by the minute, we decide to head north toward Boyd (South Knoxville) on the NS.

NS 15T with unibrow SD70M 2693 rolls south past the lake at Farragut. NS road channel 160.950.
http://www.railpictures.net/viewphoto.php?id=62833

The rain begins to sprinkle, and we head south on US 11. Coming through Sweetwater, Mark notices a former NS rent-a-wreck in the siding. After sitting for several years in the dead line, these high-hood B30-7As were sold to NREX. Apparently being short for power, NS leased at least this one back. With all the NS markings painted out, this is one dark scheme.

From: Jonathan Guy
Topic: 2246 Message: 2248

Thanks for the kind words. We managed to dodge most of the rain, Mark and I headed north just after the 3rd trip came back to Gee Creek campground. We apparently came back south just after the rain ended, so except for the clouds, I can't complain. :)

My understanding is that the Tennessee Overland Association hopes to have more trips over this line. They'd like to get the rest of the line re-opened all the way to Copper Hill. That will take some work, but the popularity of this trip may make it worthwhile.

For those of you that haven't heard, TVRM will operate this excursion next weekend, then the train comes home to Chattanooga. Tickets are $29, cheap for this kind of ride and the scenery is spectacular.

http://www.tvrail.com - Many of the trips are sold out, so if you're interested...check on tickets Now.

I think there are several models of this radio, so I'm not sure if the ones you are seeing are the same as the ones I'm familiar with. I
know that the ones I have seen will operate on 10 VHF channels, among which are Red Dot (151.625), Blue Dot (154.57) and Green Dot (154.6).
If I can find the complete list I'll post it. Always keep these three plus MURS, GMRS and FRS in a scanner bank. You never know what
you'll find going on around you!

2251. GMFD Review

Yahoo group: chattradio
Date: 2004-05-24 14:36:49 UTC
From: Larry Van Horn
Topic: 2251 Message: 2251

Ken Windyka has written his initial review of the Grove Military Frequency Directory and published it on 10 different scanner newsgroups. Here is that review for your info.

Well I just received a copy of Grove Enterprise's Military Frequency Directory Second edition (CD-ROM), and want to share with all of you what's IMHO in this outstanding reference (see www.grove-ent.com for additional information).

First of all Larry Van Horn completely revised the format of this CD-ROM making it much easier to read via the computer screen than the previous edition. Pages are set up in landscape format (11 inches width & 8 ½ inches length) and are at a large type set, as weall as a more spread out format in comparison to the first edition. The entire publication is in acrobat
format and the Abode Reader version 6 is also provided on the CD ROM to aid in viewing/printing this publication.

If you were to print out the directory (which I did and the laser printer is still cooling down!!!) it would be 764 pages. Basically it's tough to get it into a three ring binder (using a thin document protector for each state (CA needs two!!) about 5 inch thickness of paper in that binder!!!!

The contents of the Directory are as follows (with additional information I' ve added)

COVER PAGE Page (page 1)

TABLE OF CONTENTS (page 2) -- Basically you click on the appropriate title and the software takes you to that appropriate page. Individual pages are numbered but the table of contents doesn't indicate the page numbers for the titles.

HOW TO USE THIS GUIDE (pages 3 -12) -- Provides helpful information on listening to milcom both aero & ground related, as well as many common aero & ground frequencies to include trunking systems. It's a very good review for the experienced listener and extremely helpful information to the newcomer.

SERVICE LEGEND (pages 13 - 18) --- This provides both the abbreviations for services and miscellaneous acronyms utilized throughout the publication.

UNITED STATES LISTINGS:

NORAD (pages 19 - 21) --- Well with the '9/11' aftermath and the start of random & specific activities air protection patrols/air combat patrols, listed are the common frequencies for the 5 NORAD sectors as well as past air tactical frequencies active during air protection patrols in 3 of the sectors.

MILITARY COMMUNICATIONS SATELLITE BAND PLANS (pages 21 - 48) --- Basically if it's a military satellite systems (narrow & wide band systems, various transponders) such as Lincoln Experimental Satellite (LES), MARISAT (Gapfiller), NATO IV Milsat, Fltsatcom (AFSATCOM, Navy Fleet Relay), SDS Milsat, etc. the frequency as well as channel numbers are listed.

STATE LISTINGS (pages 49-728) --- Each State (50) and the District of Columbia (1) has separate pages. The smallest listing is Wyoming (3 pages) and the largest is California (73 pages). Within each state listing the following format is utilized:

STATEWIDE - Includes (where applicable) Land Mobile Frequencies as well as Flight Operation Frequencies. Land Mobile systems are primarily assigned to the Army National Guard (e.g. emergency & contingency nets). Flight Ops are air/air tactical which also are ARNG.

AIR ROUTE TRAFFIC CONTROL CENTER(S) - each location & frequencies (VHF/UHF) as well as usage (e.g. low altitude discrete, low altitude, high altitude, etc.) for these FAA facilities.

VARIOUS CIVILIAN AIRPORTS /MILITARY TRAINING & OPERATING AREAS/ MILITARY BASES (in alphabetical order):

HF RADIO FREQUENCIES (if applicable): HF SSB/ALE listings

LAND MOBILE RADIO FREQUENCIES (if applicable) include listings for such functions as: base commander's net, public works, fire, police, aircraft maintenance, aircraft parking, communications maintenance, transit/transportation, emergency coordination and many other type nets that are associated with providing both base/community as well as mission
support. Of course the size of the base/facility will determine the number of frequencies and radio communications nets that are utilized. Additionally, approximately 120 Trunked Radio Systems are listed, primarily in the UHF band, with complete information being listed on some systems (e.g. system locations, frequencies, offsets, talk groups, talk group users). Other system have not been built yet so information is limited.

FLIGHT OPERATIONS FREQUENCIES (if applicable) include: FAA related air traffic control (e.g. approach/departure control, ground control, tower, ATIS), mission support (e.g. base operations, base weather (metro), base/unit command posts) and tactical air/air air/ground systems & some aerial refueling frequencies.

OVERSEAS LISTINGS:

This new addition also includes some overseas listings (pages 729- 741) most of which are limited to Flight Operations type frequencies & some HF frequencies. Countries include: Ascension Island, Antigua, Australia, Bahamas, Belgium, Bermuda, Canada (Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario, Prince Edward, Quebec, & Saskatchewan), Europe (aerial refueling, Combined Endeavor XX Radio Relays, NATO), Germany, Guam, Honduras, Italy, Japan, Netherlands, Puerto Rico, & United Kingdom.

SPECIAL FEATURES: As a bonus & separate access the CD-ROM includes a copy of official US government military flight information publications/documents to include: General Planning Manual, Flight Information Handbook, Area Planning (North & South America, Europe/Africa/Middle East, Pacific Australasia/Antarctica, Eastern Europe), Special Use Air Space (North/South America, Europe/Africa/Middle East, Pacific/Australasia/Antarctica, Eastern Europe/Asia), Military Training Routes (North/South America) & DOD Flight
Information Publications (US IFR, USF VFR, Africa (Central/Southern Regions), Caribbean/South America, & Europe/North Africa/Middle East). All of these special feature publications are available for free download BUT the time to download these publications would range from approximately 1 hour (for a high speed cable/dsl connections) to over 6 hours for a 56 kp
modem dial up.

CONCLUSION: This frequency directory is a must to have for anyone who is actively involved or considering trying military communications (milcom) monitoring. This is a very concise directory that will point you in the right direction for getting the most pleasure out of milcom monitoring with the minimum effort . I will be doing additional more in depth reviews in the future as I continue to use the the 2nd edition.

2252. The Battle At The Cove Mtn. Repeater Site

Yahoo group: chattradio
Date: 2004-05-24 15:15:47 UTC
From: Christopher J. Palmgren
Topic: 2252 Message: 2252

----- Original Message -----
From: Lee Wilkinson

Sent: Sunday, May 23, 2004 1:56 PM
Subject: 146.85 Repeater Update

The Battle at Cove Mountain
As most of you are aware, after 30 years of operation the WA4KJH repeater was silent last week. While a lot of us "85 gang" were attending the 'big get together' at Panther Creek State Park on Saturday, Keith, WA4KJH, was traversing the "ruts" in route up Cove Mountain to the 4,000 foot level. He went to assess the problem of why such a faithful repeater was silent.
When he arrived at the scene, he was greeted by a most UNWELCOME creature at the repeater site. This was a thing that strikes fear, trembling and trepridation in the hearts of most men. It was a copperhead snake. As the question "flee? or fight?" came across Keith's mind he rationally decided what to do; pick up the biggest stick he could find and beat the tar out of the snake. Having lost some of his manual dexterity in his ripe old age, Keith missed the snake. The snake made a mad dash back into the building that Amos, K4EJP, built for the repeater so many years ago. Problem was that the metal door to the building has rusted at the bottom allowing any kind of a varmint to "slither under" the door.
Keith called me on the cell phone and described the situation with the copperhead. I only had two suggestions. First I ask Keith if he had his customary and trusty pistol with him. Now Keith was "a way ahead" of me. He said he did have his pistol but in light of the fact that the copperhead had disappeared inside the building, he didn't think it prudent to start blowing holes in the repeater, it might never work again, ever. My second suggestion was equally stupid. I said do you want me to call the old snake fighter, Charlie Fine, WB6TVW, who is always talking about "snake hissin' in some ole pit." (you would have had to been at our last "85 gang" get together to understand that one) Keith said absolutely not! He said Charlie's solution would be to take a stick of dynamite and blow the whole building up along with the 100 foot tower.
In a moment of "sheer genius" Keith said, "I'll get my waders out of the truck and wade in on that old snake... after I find a BIGGER stick." That being done, Keith c a r e f u l l y unlocked the door... shhhh.... To his surprise there was a HUGE diamond back rattlesnake staring him in the face. Now fellow amateur radio people, I don't know about you but I would see that as a BIG problem. (Wendy Bagwell ask, "where do you want another door") Keith quoted that famous saying from George "dubbu" to wit, "Bring It On." The battle began. One copperhead latched on to Keith's waders. A second copperhead latched on the waders. There was slashing... there was moaning... there was groaning... and probably a few choice words were spoken. But Keith, with his big stick, hit a home run. A mighty blow was dealt to the diamondback and it was now deceased. Several more licks to the attached copperheads rendered them helpless. A few good "stomps" and they were ready for the RIP stones to be erected. Then, as if in retaliation from behind the duplexer, came a bunch of baby copperheads. The battle of stomping continued until the premises were deemed safe and secure so the repeater could be worked on.
And now for the rest of the story. The PA (power amplifier) was 'cooked.' Keith removed the

PA to bring down off the mountain to rebuild. The repeater is now running on the exciter. This means it is transmitting with about 1/4th of a watt of power. So if you hear someone complaining about the "power being down" on the 85 machine, just tell them that it's only temporary and it will return to full power when Keith can get a chance to rebuild the PA and go back up on the mountain. (with some "Snake Away")
I have attached some pictures that Keith took with his cell phone of before and after the "Battle at Cove Mountain." Feel free to forward this information to other ham friends who have an interest in the system.
73,
--Lee

From: Matthew Sadler
Topic: 2253 Message: 2253

I'm currently testing putting some streaming audio online. If you're interested in checking it out, here's how to listen in:

Open Windows Media Player (sorry, that's all that will work with the current configuration).
Click on File, then Open URL
Type in http://scanchattanooga.homeip.net:8080/ in the box.

Note that entering this URL in IE will NOT work.

The audio sounds fine to me even on a dial-up connection. Currently the scanner is monitoring Catoosa, Walker and Dade counties.

Comments welcome.

I have changed the channels that are being carried on the ScanChattanooga.Com Streaming Audio - we are now monitoring Bradley County and Cleveland. TDOT HELP is still in the rotation as well, but the Georgia municipalities and counties have been discontinued.

Another party here in Chattanooga has expressed interest in setting up a stream to carry the city's trunked system; this may happen at sometime in the next few months as time permits. If this happens, most likely that stream would be dedicated to the trunk and mine would probably rotate between different conventional systems.

Topic: 2260 Message: 2260

Hello all. Today has been a day for the digital radio shop talkgroup. A whole lot of testing took place around 1400 and lasted for about 15 minutes. At one point of the broadcast, the comms sound as if a lot of reverb was present. The 1-2-3-4-5-5-4-3-2-1 testing sound like 1-1-1-1-2-2-2-2-3-3-3-3-4-4-4-4-5-5-5-5 and you know the rest. The audio was superb overall. After about a minute of that, the comms begin to encrypt. This lasted for about another 2 to 3 minutes and then back to the unencrypted audio. The broadast were short-lived, but fairly decent. I'll keep all posted on more testing when available.

2261. Uniden announces BC246T scanner

Yahoo group: chattradio
Date: 2004-06-04 18:13:47 UTC
From: Jonathan Guy
Topic: 2261 Message: 2261

http://www.uniden.com/press/ScannerBC246TFNL.pdf

FORT WORTH, Texas, June 1, 2004 - Uniden America Corporation today announced its latest trunking scanner, the BC246T. Representing the first in a new generation of compact handheld scanners, the BC246T introduces several innovative new features, including Uniden?s exclusive Close Call? RF Capture Technology. The BC246T will be available in the fall of 2004.
The BC246T uses a new dynamically allocated memory system, allowing the user to program its 3300+ channels into any configuration desired. While traditional scanners have been limited to only 10 banks, the BC246T groups channels into systems, allowing for 50 or more systems to be programmed and scanned simultaneously. Systems can still be quickly enabled or disabled using the 0-9 keys, and each system can have up to 10 groups of channels that are also available for quick selection.
Uniden?s exclusive Close Call? RF Capture Technology zeroes in on nearby transmissions without the need for programming, even when the BC246T is in other modes, scanning, searching or holding on a frequency. For example, if someone transmits within a few hundred feet (range depends on transmit power and other radio traffic in the area), the scanner immediately detects and tunes to the transmission, ideal for use at events when the frequency being used is unknown.
?Customers have been asking for smaller scanners, more flexible programming and more features, and this is what we set out to deliver,? said Paul Opitz, Uniden product manager. ?Continuing Uniden?s leadership in scanners, the BC246T brings scanning technology to a new level.?

The BC246T comes complete with two NiMH AA batteries, internal recharging, PC programming and control. Key features include:
? Compact Size (4?? x 2?? x 1??)
? TrunkTracker III Technology (Motorola, EDACS, and LTR Analog Trunking)
? Comprehensive Analog Trunking including I-calls, Emergency Alert, Trunk Search and ID Blockout
? Up to 3300 Channels, Dynamically Allocated
? System, Channel Group and Channel Alpha Tagging
? 25-54, 108-174, 216-225, 400-512, 806-956, 1240-1300 MHz Coverage
? Close Call ? RF Capture Technology
? SAME Weather Alert
? 10 Programmable Search Ranges
? 12 Preprogrammed Service Searches
? Backlit Display
? CTCSS/DCS Rapid Decode

About Uniden
Uniden America Corporation, the North American subsidiary of Japan-based Uniden Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems,

scanners, FRS/GMRS radios, marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells its products through dealers and distributors throughout North, Central and South America.

2262. VERY IMPORTANT - Internet Service Provider Refund Due to All TN Customers

Yahoo group: chattradio
Date: 2004-06-04 22:19:30 UTC
From: Jonathan Guy
Topic: 2262 Message: 2262

I will apologize in advance for this off-topic message to any of the Yahoogroups I've included in this list. However, the majority of the list members probably reside in Tennessee, and this refund could be enough to pay for your internet service for a month or two, IF you live in Tennessee, so I thought it might be worth the bandwidth. :)

** I actually called Bellsouth Internet Services at 1-800-4DOT-NET and verified this with a Bellsouth employee, it isn't an internet scam ** I have already submitted my request using the Bellsouth address listed below, confirmed by Bellsouth to be the correct website. (Of course I have Bellsouth, so if you have Comcast, please see their website.)

Jonathan

Thanks to Don on the NashvileScan YahooGroup for posting the original!

FORWARDED MESSAGE:

You may or may not know that the Tennessee House signed a bill on May 18th regarding the collection of sales tax on ISP services. This legislation was enacted in response to the Tennessee Court of Appeals' 2003 ruling that charges for Internet access services are not subject to sales tax in Tennessee.

The catch is your cable provider is only required to refund the money to you if you REQUEST a refund. IT IS NOT AN AUTOMATIC REFUND. You only have until July 17th to request a refund from your ISP of all sales tax they collected from you back through December 2000.

For documentation of this, see www.tennessee.gov/revenue to get the lowdown. Look in the top left corner under "Hot Topics" and click on "Internet Access: Procedure for Claiming Refunds of Sales Tax." I have obtained the websites for two cable providers, Bell South and Comcast. If you have your cable service through another company, you will need to call them to get the website where you can download and print out your request for a refund.

I don't think a lot of people know about this and I don't believe the state is really advertising this...they don't refund the money from the state to the ISP unless the ISP forwards documentation that they have refunded the tax...so the consumer is just out of luck if he doesn't know. This is one e-mail I would definitely pass on to all of your friends and family in TN so that they can also receive the money the ISP and state owe them.

Meredith Agrees to Purchase WB Affiliate in Chattanooga
Friday June 4, 2:31 pm ET
Extends Meredith Broadcasting's Reach in the Southeastern United States

DES MOINES, Iowa, June 4 /PRNewswire-FirstCall/ -- Meredith Corporation (NYSE: MDP - News) announced today that it has agreed to purchase WFLI-TV, the WB television affiliate in Chattanooga, TN, from Chattanooga Broadcasting L.P., part of the Lambert Television Broadcast Group. Terms were not disclosed.
Chattanooga is the 86th largest television market in the country, and the station serves viewers in southeast Tennessee and northwest Georgia. WFLI-TV airs on channel 53.

"We are excited to extend our reach into the vibrant Chattanooga market and grow our presence in the Southeast," said Meredith Broadcasting Group President Kevin O'Brien, noting Meredith's existing stations in Atlanta, Nashville and Greenville, SC. "We intend to improve WFLI's programming and operations, and viewers and advertisers alike will be pleased with these upgrades.

"It's great to gain a WB affiliate, too," O'Brien continued. "The WB network has improved dramatically in the past few years. Adding a WB station further diversifies our affiliate mix, and this acquisition will give us stations affiliated with five of the six major networks."

The television station purchase is subject to Federal Communications Commission approval. It is expected to close in September or October.

About Meredith Corporation

Meredith Corporation (http://www.meredith.com) is one of the nation's leading media and marketing companies with core competencies in magazine and book publishing, television broadcasting, integrated marketing and interactive media. Meredith owns 12 television stations that reach nearly 10 percent of U.S. television households: WGCL-TV (CBS), Atlanta; KPHO-TV (CBS), Phoenix, AZ; KPDX-TV (UPN), Portland, OR; KPTV (FOX), Portland, OR; WFSB-TV (CBS), Hartford-New Haven, CT; WSMV-TV (NBC), Nashville, TN; KCTV (CBS), Kansas City, MO; WHNS-TV (FOX), Greenville-Spartanburg-Anderson, SC-Asheville, NC; WNEM-TV (CBS), Flint-Saginaw, MI; KVVU-TV (FOX), Las Vegas, NV; WSHM (CBS), Springfield, MA; and KFXO-CA (FOX), Bend, OR.

2266. RE: [chattradio] VERY IMPORTANT - Internet Service Provider Refund Due to All TN Customers

Yahoo group: chattradio
Date: 2004-06-05 05:49:08 UTC
From: Richey Goldberg
Topic: 2262 Message: 2266

Working for a local ISP I can confirm that this is true. This is going to put a strain on the smaller ISPs because we have to front the money and hope that the State of Tennessee comes through in a timely manner. When you total it up it can amount to a lot of money to issue back.

Originally we were told by the state that it was our option to issue refunds or not. If we did not issue refunds then we could not collect a refund our selves. They sent out a letter in Feb telling us that we were to stop collecting Tax on internet access. They did not notify us of the refund change. I didn't find out until I got a call from a customer telling me about what he had read in the paper.

ISPs do not have to give you cash back. They can elect to issue you a credit on your bill. We have not decided on if we are going to give back cash or issue credits yet. You must notify your ISP by July 17 that you want a refund. We are asking that our customers send their request in writing. We have already had a few requests though I wish the paper had specified a typed letter because I already have a few that are written so poorly that I don't know who they are from. :-) If you do not notify them then by the date then you won't get a refund, it will not be an automatic refund.

On a side note, BellSouth has been so kind as to enforce the Universal Access Charge on all DSL providers. Anyone who is using a local ISP that previously did not charge this fee should start to see it by their next bill. Until now we did not have to charge this because we were providing data service and not voice service. On a technicality we now have to charge it because DSL is delivered over Bell's phone network. Comcast is exempt from this because their network does not travel across the phone network. (Fair uh?)

Two items of interest in this email.

FIRST:
The online scanner is back after being offline for about two days. Hauled the old desk and table out, brought in (and assembled) a new desk, so all of the stuff underneath had to go temporarily. But the online scanner is back online. I have added a web interface so you can surf to a page and there is a little embedded Windows Media Player box that will automatically open the feed. It is located at http://www.scanchattanooga.com/online-scanner.shtml . Of course, if you prefer to open it directly up in WMP, that's your decision. The page has a little info on what's behind it and a few FAQs to head off some inevitable emails. I will have a link to it shortly from the main ScanChattanooga.Com page.

SECOND:
Yet another new public safety repeater coming soon...

Cherokee County, NC - Rescue Squad
151.0100 MHz out
158.9025 MHz in
Location: Murphy, NC

Several cities in Tennessee have laws on the books concerning scanner operation.

http://www.chattanooga.gov/citycode/code/Chapter16.pdf

ARTICLE IV. INTERCEPTION OF POLICE RADIO SIGNALS Sec. 16-71. Definition. A "high frequency police radio receiving set" shall be defined as any radio receiving set capable of receiving any message sent out by any police radio station. (Code 1986, § 16-71) Cross reference-Definitions and rules of construction generally, § 1-2. Sec. 16-72. Permit for operation of high frequency receiver required. It shall be unlawful for any person to equip or operate, inside the city, any motor vehicle with a high frequency police radio receiving set, unless such motor vehicle is being used by the federal, state, city or county government or a peace officer, or unless a permit for the use of the same shall have been granted as provided in this article. (Code 1986, § 16-72) Cross reference-Businesses, trades and occupations, Ch. 11. Chapter 16 ☐ Page 13 CHATTANOOGA CITY CODE Sec. 16-73. Application for permit. Any person desiring a permit from the city to install and operate a high frequency police radio receiving set in a motor vehicle inside the city shall file an application with the police chief, in writing, stating the name of the applicant, the license number, motor number, model and make of the motor vehicle in which it is desired to install such set, and shall furnish a photograph of the applicant and his fingerprints. The application shall also state the reason why it is desired to install the set. If the police chief, after an investigation. finds that the application shows a need for the set, that the set will be used for a lawful purpose and that the public interest will be served by the granting of the application, he shall recommend to the mayor the approval of such application. (Code 1986, § 16-73; Ord. No. 9654, §§ 13 and 98, 1-6-92) Sec. 16-74. Permit issuance; fee; renewal. Upon approval by the mayor of an application for a permit under this article, the city treasurer shall issue to such applicant a permit for installation and use of the set, upon payment by the applicant of a license fee of twenty-five dollars ($25.00) per year. Application must be filed and a new permit secured for each year a high frequency police radio receiving set is used. (Code 1986, § 16-74; Ord. No. 9654, § 133, 1-6-92) Sec. 16-75. Permit nontransferable; notice of change in license number of vehicle. Any permit issued under the provisions of section 16-55 of this Code shall not be transferable to any other person. Any high frequency police radio receiving set authorized to be installed and used by

any such permit shall not be placed in any other motor vehicle than the one described in the application for the permit without first obtaining a permit from the police chief for the removal of the set to the other motor vehicle. No fee shall be charged for such removal permit. In the event of a change in license number of any motor vehicle in which a high frequency police radio receiving set has been permitted to be installed under this article, the owner of such vehicle shall notify the police chief of such change within five (5) days after the change is made. (Code 1986, § 16-75; Ord. No. 9654, § 98, 1-6-92) Sec. 16-76. Permit revocation. Chapter 16 ☐ Page 14 If any person who has been issued a permit to install and operate a high frequency police radio receiving set violates any of the provisions of this article or uses such set for an unlawful purpose, where the public interest requires, the permit may be revoked upon giving the holder of such permit five (5) days' notice of the time and place to appear before the mayor to show cause why such permit should not be revoked.

2276. Walker County to get new communications tower

Yahoo group: chattradio
Date: 2004-06-18 09:36:13 UTC
From: Matthew Sadler
Topic: 2276 Message: 2276

From today's (June 18, 2004) edition of the Chattanooga Times Free Press.

==========

Walker gets site for tower
By Ronnie Moore Staff Writer

LaFAYETTE, Ga. ? Walker County agencies will avoid the loss of emergency communications services this summer after the Lula Lake Land Trust donated property for a new communications tower.
Walker Commissioner Bebe Heiskell declared an emergency Thursday and signed a no-bid contract with Ogeechee Wireless to construct a 199-foot tower at High Point on Lookout Mountain for $99,700. The tower will replace communications equipment now located on a Georgia Forestry Commission fire tower.
"We can?t be without communications services for even one hour," Mrs. Heiskell said. "We must have our transmitters off the Georgia Forestry Commission tower we now use by July 15. I couldn?t wait for the bidding process."
She said a family gave the land to the Georgia Forestry Commission in 1949 for a fire tower. The county began placing transmitters on the tower by agreement in the 1970s.
"The Georgia Forestry Commission quit using the tower about 12 years ago," Mrs. Heiskell said. "It has recently been discovered that the land reverts to the estate of the previous owner when no longer used by the Forestry Commission."
The state agency is returning the land to the family of the previous owner on July 15 and will tear down the existing tower.
Mre. Heiskell said Christine Combs and her brother asked $85,000 for the acre of land where the existing tower stands.
"We were fortunate that Sen. Jeff Mullis assisted us in receiving an emergency grant for $95,000 from Georgia Emergency Management Agency through the Homeland Security Act," Mrs. Heiskell said about paying for the new tower.
County Coordinator David Ashburn said there are 11 transmitters on the current tower to serve the 911 Center, sheriff?s department, communications of all other law enforcement agencies within the region and the Walker County Fire Department.

From: John Creel
Topic: 2277 Message: 2278

Check the crimping around the base of the connector. A loose shield connection you can fix with a pair of pliers, crimping the collar on the braid.
If the center conductor is lose you may have to replace the connector. Many BNC connectors have crimping of the center conductor that is often inside insulationed area on the plug and almost impossible to repair. Doc's Communications can usually replace the BNC connector. If it's RG-58 or 59 I can probably fix it at WTVC. Call me, John Creel, at 421-9027.

2279. Red Bank Fire

Yahoo group: chattradio
Date: 2004-06-19 09:37:59 UTC
From: Matthew Sadler
Topic: 2279 Message: 2279

The Red Bank Fire Department has been awarded a $73,352 grant from the Department of Homeland Security through their Assistance to Firefighters program. RBFD officials said that the money will be used to purchase 800 MHz radios so they can fully get on the county-wide trunking system.

They already have a talkgroup which is occasionally used, 18864.

This from the Chattanooga Times Free Press (which notes that they currently use a BHF frequency... your webmaster isn't familiar with the BHF band. Methinks typo - the V and B are right next to each other. Yet another example of how the local newsrag has gone downhill ever since the Free Press and Times merged).

From: Christopher J. Palmgren
Topic: 2281 Message: 2283

Brandon,

One good repeater that would serve the McCaysville, GA, area is the WD4DES 147.180+ repeater. It requires a subaudible tone of 118.8 Hz to access. The repeater is located on top of Oswald Dome in Polk Co,. TN, at 3100 feet above sea level. At the same site, you'll find the WD4DES 442.250+ that also requires a subaudible tone of 118.8 Hz to access.

Another repeater I might suggest is the N4NEQ 147.165+ repeater that requires a subaudible tone of 151.4 Hz to access. It's located in Fannin County, GA.

I have a list of ham radio repeaters that I can hit from my home in Chattanooga at http://www.qsl.net/w4ors/repeaters.htm. It's fairly up-to-date.

I hope this helps. Give me a shout on the 147.18+ sometime when you are up here. I'm usually around in the evenings monitoring.

Subject: [chattradio] McCaysville, GA Repeaters

Howdy:

I am on my way to McCaysville, GA to visit family and plan to spend a couple of nights there. i plan to spend time in valdista or whatever it may be called for one night also. anybody know of good Amateur repeaters i should use? I have a 5w10w50w ICOM rig 2m only and a 5w Kenwood TH-D7A TNC/APRS HT which has 2m/440.

thanks and 73's

There is no maybe about the AA batteries Jonathan. The four new Uniden handheld scanners being released between now and the end of the year will all be AA capable. They will all also have the new "Close Call" RF technology and the BC-246T will also have dynamic memory mangement (I believe we have a writeup on that in the Aug MT on how that is going to work. It is also posted on the MT Chatboard at the MT website. We have had details on these radios on the Grove website for well over three weeks ago -- "Thou should really check our Radio Rumors pages sometime Jonathan."

I have just finished testing the new BC-898T scanner this weekend and it was very nicely done. It is the direct replacement for the 1st generation Uniden trunk tracker the BC-895XLT. Biggest improvements more memory channels, trunk tracker III technology (analog only no digital), and a much much faster CTCSS/DCS search capability. Should sell for about what the 895 did, give or take a buck or two. Biggest disappointments -- search routine spacing still do not conform to current bandplans, large chassis (definitely not a mobile mounting candidate), no independent mode selection (will not get the Milcom seal of approval for mil monitoring). Also disappointed in the LTR trunk mode display for talk groups and lack of frequency display in this mode.

Other than that, good radio that gets 3 and a half stars out of 5.

73 all and I will have an inside look at the new BC-246T very very soon, well before the unit is released this fall.

2286. TVA plans emergency response drill this week for Sequoyah plant

Yahoo group: chattradio
Date: 2004-06-22 03:41:47 UTC
From: glacierclipper
Topic: 2286 Message: 2286

By Candice Combs Staff Writer

Chattanooga residents shouldn't be alarmed Wednesday if they notice emergency vehicles responding to the Tennessee Valley Authority's Sequoyah Nuclear Plant.

"Every nuclear site has to go through an emergency response test," said Capt. Trey Brannom with the Tennessee Emergency Management Agency. "It helps exercise the different parts of an emergency response."

Beginning at 9 a.m., TVA officials will cooperate with local, state and federal safety personnel in a mock emergency at the nuclear plant, according to Chief Ken Wilkerson with Hamilton County Emergency Medical Services.

"We have to practice to make sure everything works," Chief Wilkerson said.

The simulation is meant to improve communications should the area have to be evacuated, Capt. Brannom said. Passersby should expect to see an emergency command center, police cars and possibly firetrucks and ambulances.

"Oftentimes when you have an emergency, the ambulance driver or firefighter knows what to do because he does it everyday," Capt. Brannom said. "The part that doesn't get exercised on a daily basis are management and coordination. We could have a situation where Bradley County's fire department needs to talk to Hamilton County schools."

The drill is expected to last most of the day Wednesday.

2287. TRS changes?

Yahoo group: chattradio
Date: 2004-06-22 21:21:33 UTC
From: Jay
Topic: 2287 Message: 2287

Has there been some changes to the Chattanooga TRS system? My BC245XLT won't trunktrack correctly. I have all 20 frequencies programmed in and it has always worked fine, until now. I went to the scanchattanooga site and realized that some freq's have been taken off. Do I need to program only the ones listed there? I think there were 15 listed - 10 old ones and 5 new ones. I know they are changing over to a digital system, but I seem to be able to pick up the conversation fine on the conventional freq's, but it doesn't trunk properly. I also have a pro-2067 in the vehicle and it has all the initial 20 freq's in, and it is still working properly, so how can this be if there has been a change? I have 2 scanners programmed with the same freq's, but only 1 is working properly. Anyone know what I am doing wrong? Thanks.

You have to put the old system in one bank, and the new system in a separate bank. Then your scanner will follow the systems correctly. At this time, public safety is still on the old system, and public works and similar agencies have already been migrated over to the new system.

Thanks for the reply Matthew. One other question - how come my
pro-2067 is still working perfectly fine if they made the change? It
seems like it would be doing the same thing as the 245. Thanks!

Matthew - without making any changes to the 245, I turned it on this morning and it started working fine, with all 20 of the original freq's in it. Are they turning the old system on and off, thus causing this back and forth problem? I did what you said (if I understood correctly) and put in a seperate bank the 10 freq's listed, then put the other 5 new ones in a seperate bank. This would pick up the conventional transmissions fine, but it would not trunktrack it at all. Am I doing something wrong? Like I said, the original problem I had has cleared up, but I assume I will experience it again. Thanks for any help you can provide!! Take care.

Both systems are fully operable and I can assure you they aren't just
"turning the old system on and off."

Sounds like you didn't program the frequencies in as trunking frequencies, a
common problem on the 235 and 245 scanners.

I concur with Matthew on this Jay. About 85% of the trunking problems I run into on our Grove Tech Support Lines are either frequencies not properly entered or frequencies not entered as trunk channels on the earlier TRS scanners. Had the same problem with a monitor down in Gwinnett County last week. One day his scanner would work, the next it won't. He had added some freqs conventionally and one of them was a new control channel. Duh!

Sorta like the day I got the first BC-235 scanner and ran down to Cobb Co to test it out. Plugged every freq for them conventionally and as I sat in the Cobb Mall wondering why I couldn't hear their system, I reread the manual. Since then I have learned to do the one thing that most males don't -- RTM! ;-)

2295. Re: Possible VHF Digital Comms

Yahoo group: chattradio
Date: 2004-06-30 22:41:02 UTC
From: Wadie E. Suttles III
Topic: 2295 Message: 2295

While doing a search on the VHF-High Band, I stumbled on 153.7300mhz. This frequency was giving sounds of digital comms throughout my search. So I decided to save it and store it in a conventional bank and turn on the P25 card. And within minutes, the comms were in use again. I didn't get any voice communications, but a brief blast of the data sounds that's recognized as "digi-comms". During this time, the display showed "LNK" on the scanner. I tried to adjust the card while I had the transmission, but the transmission was short lived. I never got the chance to hear what was behind the digi-comms nor did I hear it again.
So does anyone know what this frequency is? I will continue to monitor this frequency, in hopes that I get those comms again. But I am unsure of what this frequency is used for. And according to Radio Reference, the nearest agency that's using this frequency is Franklin County VFD, in Winchester. So be mindful of this frequency while monitoring. It sounds like someone may be using this frequency with P-25 comms.

Actually, what you were likely picking up would be the Sequachee Valley Electric Cooperative. They have a repeater in Tracy City on 153.725 and they are using a digital radio system of some flavor.

Their other repeaters, which are all closer to Chattanooga, are:
153.2225 and 153.680 on Suck Creek Mountain (Whitwell)
153.020 in Pikeville (beware co-channel interference from Hutcheson Medical Center; they are analog with PL 141.3)

I've never heard as to whether or not they are using an IMBE digital system which can be monitored on the current digital scanners or not, but would certainly be interested to know if this is the case.

FYI; the band "splits" at this very frequency. 153.7325 and below is in the Industrial/Business pool, 153.740 and above is in the Public Safety pool. The Georgia Department of Corrections uses 153.740. They use it a lot, actually...

I'm am clear on the misprint. I realize that my scanner had a bad frequency in it. It was suppose to be 155.730. But instead, it was 153.730. My apologies. However, those digital comms on the frequency 153.730 were broadcasting quite frequently during the afternoon hours. And with some clarification, I was updated by mws6533 about the company, "Sequatchie Valley Electric Co-Op", in which uses P25 comms on VHF. The frequency I had program was a possible interference channel from 153.725, one of Sequatchie Valley's frequencies. Once again, I apologize for any misinformation. I was trying to get any info I could find on these digi-comms.

2301. New Feature at ScanChattanooga.Com

Yahoo group: chattradio
Date: 2004-07-12 06:08:51 UTC
From: Matthew Sadler
Topic: 2301 Message: 2301

ScanChattanooga.Com is now offering a free message forum to all of our users!

I just finished installing and doing some preliminary testing of it and all seems to work well. To get there, just visit http://www.scanchattanooga.com/forum/

You can register for an account which will allow you to post messages and replies.

Obviously, it's still a little rough around the edges, but with your suggestions I can add features that you think would be helpful.

Please try it out and let me know what you think about it.

Did I mention NO ADS? That's right, NO ADS! NO ADS! I hate ads and I'm sure you do too.

(And the online scanner should be back shortly... ran into some issues with the computer which was running that following some power outages which haven't really been very high on my priority list.)

Impressive new look!
Thanks for all the hard work you do for the local scanning community.
The new format works great with my PDA. Much easier to use than the
multiple column format.

Topic: 2303 Message: 2303

Hey, I need some help over here logging in to your new scanchattanooga forum site. It won't accept my name or my password, and after 3 tries it says my account is disabled. Whats the situation there? It says to contact the forum administrator which to the best I can figure out is K4LHP, which I am "hoping" this is you. There is no e-mail address for contacting you on that page and the e-mail address line in his profile has been left blank. I would have preferred to send a private message to you but guess what, I gotta be logged in to send one! I am registered as clockman so could you please find out what the problem is and e-mail me the answer? I enjoy anything that is RF related in the Chattanooga area and would like to continue accessing your site(s). Thank you very much. Sincerely, -Glen Hendon

2304. Area Ham Repeater News

Yahoo group: chattradio
Date: 2004-07-20 03:51:51 UTC
From: Christopher J. Palmgren
Topic: 2304 Message: 2304

Here's the latest game plan for several area amateur radio repeaters which are in the process of being moved or about to come online:

NEW W4RRG 442.675+ T 100.0 Will go to the White Oak Tower #2 (AAA Tower at Mahan Gap). The repeater will be linked to W4RRG 442.650+ T 100.0 using a 50mw link. Should hopefully have this repeater on by the end of this week. It will be using a DB-420 (16 bay) from near the top of the 350' tower. Repeater should have a tremendous coverage area south of Knoxville to north of Atlanta.

NEW W4LAW 147.375+ T 77.0 This repeater was recently sold to Doug Woodruff. The repeater is currently being evaluated and tweaked. It may go to the new Walker Co. High Point tower, but eventual site remains open at this time. Site evaluation for maximum benefit is currently underway.

NEW W4RRG 146.760- T 67.0 This repeater will move to South Pittsburg Mountain. Eventual plans are to have it linked into the NORA 2m system (145.37-, 145.23-, 146.955-, 147.36+ T 114.8 in middle TN). This will enable coverage from almost to Paducah, KY, into north Georgia.

NEW WR3S 224.760- This new repeater will go to South Pittsburg Mountain. It will be linked into the mega WR3S 220 system and will fill a void in coverage near the eastern side of Monteagle Mountain. This mega system will have interstate coverage (I-24, I-75) from near Paducah, KY, to south of Atlanta, GA.

W4RRG 442.650+ T 100.0 This remote base hub repeater will move from its temporary home on Missionary Ridge near Rossville to the new Walker Co. High Point tower. It will use a DB-420 (16 bay) and will have remote base capabilities on 2m and 440 from Lookout Mountain.

WR3S 224.560- This linked 220 repeater will move from its temporary home on a tower south of the intersection of Hwy. 136 and Hwy. 157 to the new Walker Co. High Point tower. This repeater will be linked into the 224.760- and will be part of the mega 220 link system. (see above).

W4GTA 145.350- T 100.0 This Tri-States Amateur Radio Club repeater will move from its temporary home on a tower south of the intersection of Hwy. 136 and Hwy. 157 to the new Walker Co. High Point tower. This move will return the repeater to the tremendous coverage area it enjoyed previously.

NEW W4RRG 442.475+ T 67.0 This repeater will go to the Missionary Ridge site near Rossville and will be linked into the 442.650+ T 100.0 hub repeater on Lookout Mountain. This repeater will provide hand held coverage into the downtown Chattanooga area that's shaded from the High Point site.

The W4RRG, W4GTA, and WR3S groups all have a lot of repeater work ahead of them. They are looking forward to providing the area with an enjoyable repeater system that will be very beneficial to area hams.

The W4RRG 224.920- that's on the White Oak Mtn. Tower #1 will continue its operations there and will be part of the mega 220 system. The OARS club's WD4OAR 442.925+ T 100.0 repeater will remain on White Oak Tower #1 under its current operation that includes two remote bases on 2m.

These systems will keep activity going on the VHF/UHF bands that are always under the threat of removal. As David Benton WB4JGG says, "Use it or lose it!".

73,

Chris

2305. Fw: End Of An Era

Yahoo group: chattradio
Date: 2004-07-22 04:55:08 UTC
From: Christopher J. Palmgren
Topic: 2305 Message: 2305

The fire tower on Lookout Mountain at High Point was pulled down around 7 p.m. yesterday. The 90 foot fire tower perched on the highest peak of Lookout Mtn. (2392' above sea level) for 55 years. It all came crashing down yesterday evening. The Georgia Forestry Commission used the tower up until 12 years ago when it was abandoned. The fire tower was the long time home of the W4FGQ 145.35 repeater that belonged to Lloyd Watts. Later, the repeater would change ownership to the Tri-States Amateur Radio Club. Then, in the following years, the 442.65 and 224.56 were added to the fire tower.

All those repeaters are in the process of being moved to the new 199' Walker Co. Communications tower that sits about 300 yards to the south of the old fire tower. The antennas will be mounted this morning.

I, along with a few others, witnessed the tower collapse first hand. I have some still pictures of the tower as it came down. I'll post those soon. I'll also post an mpeg movie of the tower collapse when I get it. The mpeg movie has both video and sound.

73,

Chris

2307. WRCB Building New Tower

Yahoo group: chattradio
Date: 2004-07-25 05:36:18 UTC
From: Matthew Sadler
Topic: 2307 Message: 2307

WRCB has begun building its new tower on Signal Mountain (in case you missed the plug about it in the 5 and 6 PM newscasts on Friday afternoon, with the tapes expertly loaded by your capable webmaster), which will be about 160 feet taller than the current tower.

You can keep up with the progress as the new tower is built by visiting the ScanChattanooga.Com Forum, online at http://www.scanchattanooga.com/forum/ and going to the "Broadcast" forum. I will wander up there periodically and take a new snapshot which I will post in that message thread. Once construction is complete, I will build it into a webpage.

Look forward to seeing more of you over on the forum.

2308. Changes... they are a comin'

Yahoo group: chattradio
Date: 2004-07-30 07:09:04 UTC
From: Matthew Sadler
Topic: 2308 Message: 2308

Yes, more change is on the horizon.

You may have noticed that Erlanger's LifeForce EMS (the new name for their ground ambulance service) is operating on the trauma control channel, 155.280 MHz, instead of on the trunked system. This is because they are busy getting their radios reprogrammed in preparation to switch to the "new" city trunking system.

Which brings this up - at 8 AM on Saturday (July 31), everyone will switch over to the "new" system. How long the "old" system stays on the air remains to be seen, but I doubt it will be long.

At least this time we won't be caught off-guard and not knowing what's happening!

From: Fred White
Topic: 2313 Message: 2313

For some reason, I can't post to Chattradio. Could you please forward some
information to the group.
First, when the change happens tomorrow, people will have to make sure they
have 860.9625 programmed in as a trunked channel in their TrunkTrackers.
It's the "new" data control channel. It's one of the 20 channels licensed
to the system, but many folks had to lock it out because this controls the
new system that up until now only controled public works types users. It
interefered with the current data control channels.
I would bet that 857.2125, 858.2125 and 859.2125 will only be voice
repeaters for the system, and no longer used as data control channels.
Basically, keep all 20 channels unlocked, and we'll see which ones control
the new system.
Talkgroups shold remain the same.
Also, another great source of information about the Chattanooga system, and
trunking nationwide, is: radioreference.com
For Chattanooga specifically, go to:
http://www.radioreference.com/modules.php?name=RR&ctid=2460
John

As has been previously discussed in the group, the system is digital-capable. Current analog talkgroups will stay analog. The control channel is a 3600-baud channel.

Hi Fred. Let me see if I can assist you.
The Radio Reference site have received many updates from the local hobbyist. And I'm sure that the Scan Chattanooga site is working on updates as well. As for your scanner, the 780's will work for now. However, now that this system does support digital, digital comms will increase with more agencies upgrading and updating their mobiles, portables and bases. So if I were you, I would enjoy the 780 as long as I possibly could. And in the same breath, planning the purchase of a 785 w/ card or a 796. That way, when one of the many agencies decide to use the digi-comms, you'll be able to monitor.

Matthew,

2320. RE: [chattradio] Conversion Complete

Yahoo group: chattradio
Date: 2004-08-01 19:14:53 UTC
From: Matthew Sadler
Topic: 2316 Message: 2320

One very important thing that I need to point out is this: there won't be an en masse switchover to digital anytime soon. You may see new users come online with digital, or you may see users here and there be switched over to digital. The reason you won't see a mass change is because so many of the current users have the MTS2000 and LTS2000 portables, and their companion mobiles, which do not support digital. If you think about just how many radios would have to be replaced to change over an agency like the Chattanooga Police, then you can appreciate just how much money would be required to do this (and you thought the scanners were expensive... the "real deal" puts that price tag to shame).

Me, personally, I am staying with my BC780XLT and don't really have any plans to run out and buy a digital scanner - for two reasons - first, the price will come down, the longer I wait (and I feel no urgency to rush out and get one) and second, I know enough people who have digital scanners, so if digital talkgroups start becoming active, they can tell me who is using them. At that point, I can make a decision based on how much I want to listen to those users vs. how much the radios are costing.

For the cheap users out there (like me), stashing away some $$$ every month in the "digital scanner fund" might not be a bad idea.

Also, let me reiterate what I was told by a source who would certainly be in a position to speak with some authority on why this change-over happened - for two reasons... first, to make it much easier to expand the system's coverage into bordering counties; and second, because Motorola is dropping their support for the older SmartNet analog system.

Just my 0.02.

2322. Air Evac Lifeteam

Yahoo group: chattradio
Date: 2004-08-02 05:42:09 UTC
From: firemedic2150
Topic: 2322 Message: 2322

Well with the help of my good friend Matthew Sadler, I have the frequency that Air Evac Lifeteam 41 is using in the Athens, TN area to talk to the Lifeteam dispatch center in West Plains, MO.

Air Evac has a nationwide itinerant frequency license WPYR891, that they are using from a tower somewhere near Athens. The frequency is 158.4000 with a DPL of 032. This will change at some point in the future I am sure, as they file all of the paperwork for a permanent license in the area.

You might also want to listen to 152.9975 with a DPL of 032, this is the frequency that they have on a tower on Short Mtn. outside of Nashville, and they use in the TN area.

Mark Mc.

2323. Re: [chattradio] Air Evac Lifeteam

From: David Cannon
Topic: 2322 Message: 2323

I picked them up this weekend but when they gave the time in Central it confused me. The Missouri base of operations explains that.

I wonder if Erlanger will let them use their ER helipad, since they now compete with Lifeforce?

2324. Control channels for new system

Yahoo group: chattradio
Date: 2004-08-02 22:41:55 UTC
From: Jim Knight
Topic: 2324 Message: 2324

Now that the new system is in place and there is no longer a control channel on one of the *.2125 frequencies, will the control channel rotate to different frequencies like it used to or just stay on 860.9625? So far it seems to be doing the latter. I thought the control channel rotated in order to keep from wearing out one particular transmitter. Is that not the case with a digital system?

2325. New system control channels

From: glacierclipper
Topic: 2328 Message: 2328

The Pro 96 can be mailed into the Radio Shack Service Center for the upgrade.

When mailed include a copy of the Sales Invoice and describe the type of upgrade being requested.

Mail to: Radio Shack Service Center
2516 NE Loop 820
Fort Worth, TX 76106

Phone: (817)- 625-5982

This information was obtained from the Radio Shack Service Center.

Getting the Pro 96 upgrade can be obtained without going to a Radio Shack dealer, if a dealer is not located nearby.

Topic: 2333 Message: 2333

Highway Patrol faces wait for radios
By Dick Cook Staff Writer

Dispatchers at the Tennessee Highway Patrol's Chattanooga district office communicate with troopers using a radio system installed in the Carter administration, officials said.
The THP is installing a new, 800 MHz system across the state, but officials say they don't know when it will get here or how much it will cost.
"Once we get to the eastern part of the state, all bets are off," said Lt. Joel Moore, who works in the agency's research planning and development office in Nashville So far, the THP has spent about $1.2 million in federal grants to build or adapt 21 radio sites across West and Middle Tennessee, Lt. Moore said.
He said early estimates of about 25 radio towers to cover the hilly eastern part of the state were too low. "No way can I see us covering East Tennessee with only 25 sites," he said.
THP officials said it could take three years or longer to get the system up and running statewide.
The radio system would make it easier for troopers to communicate with local agencies, something emergency responders call "interoperability."
The system also would allow troopers to ship data from in-car laptops to a central computer.
Lt. Danny Hall with the Chattanooga District office said troopers can communicate with local agencies if they need to. Dispatchers can telephone sheriff's departments anywhere in the district, he said.
Upgrading Tennessee Highway Patrol radios has been top priority for several years, officials said, but the urgency increased after the Sept. 11, 2001, terror attacks.
The state Department of Safety has received about $2 million for communications from the state Homeland Security department since 2003, said Rick Shipkowski, deputy director of Homeland Security.
Lt. Moore said it costs about $58,000 to equip each radio antenna site with the new technology. He said the actual radios and other hardware have yet to be purchased.

It's a 3600 baud system. The only systems which are 9600 baud are digital-only and do not support analog operations at all.

2336. Channel 3 Tower Work Continues

Yahoo group: chattradio
Date: 2004-08-13 02:15:06 UTC
From: Chris Palmgren
Topic: 2336 Message: 2336

WRCB-TV Sign-Off to Complete Antenna Upgrade

WRCB-TV Channel 3 will likely be off the air sometime Friday.

We have a progamming note to tell you about. WRCB-TV Channel 3 will likely be off the air sometime Friday.

This is to wrap up work on installing an antenna for Channel 3 on the station's new TV tower. Workers are hooking up transmission lines and then a final inspection will take place.

Comcast Cable customers will still be able to see our signal because of a fiber link connection. We hope the work will be completed quickly to bring you a better signal. We thank you for your patience.

2337. Talkgroup Change

Yahoo group: chattradio
Date: 2004-08-13 16:13:13 UTC
From: Matthew Sadler
Topic: 2337 Message: 2337

In the move to the new city trunked system, two talkgroup assignments have changed.

Erlanger Police 2 is now 22640 and Erlanger Engineering 1 is now 22672. They have simply flip-flopped.

Live in NW Bradley County, 'bout a mile south of Charleston.
I spent several hours working in Polk County on Tuesday at the
courthouses in Benton and Ducktown. Saw several PCSO cars, no new
antennas or equipment visible. Officers are carrying the same radios
as always. At this point, I'm checking out the privately licensed
VHF frequencies (Eaves), thinking that they may have made a move
similar to Bradley County EMS. Solving this mystery of the missing
PCSO may ultimately require Matthew's expertise!

2345. RE: [chattradio] Mobile Scanning

Yahoo group: chattradio
Date: 2004-08-23 22:01:49 UTC
From: Jonathan Guy
Topic: 2338 Message: 2345

The State of TN doesn't have a prohibition on mobile scanners. Although you won't see 'scanner' in the law books, it'll be something to the effect of 'HF reciever capable of receiving police radio transmissions'.

The local municipalities however are where you need to be careful.

http://www.chattanooga.gov/citycode/code/chapter16.pdf
ARTICLE IV. INTERCEPTION OF POLICE RADIO SIGNALS
Sec. 16-71. Definition.
A "high frequency police radio receiving set" shall be defined as any radio receiving set
capable of receiving any message sent out by any police radio station.
(Code 1986, ? 16-71)
Cross reference-Definitions and rules of construction generally, ? 1-2.
Sec. 16-72. Permit for operation of high frequency receiver required.
It shall be unlawful for any person to equip or operate, inside the city, any motor vehicle
with a high frequency police radio receiving set, unless such motor vehicle is being used by the
federal, state, city or county government or a peace officer, or unless a permit for the use of the
same shall have been granted as provided in this article.
Chapter 16 - Page 13

I believe Nashville has a similar code, and I'd bet Knoxville and Memphis do too. I'm not sure the City of Chattanooga has ever actually issued such a permit.

The State of TN doesn't have a prohibition on mobile scanners. Although you won't see 'scanner' in the law books, it'll be something to the effect of 'HF reciever capable of receiving police radio transmissions'.

The local municipalities however are where you need to be careful.

It also no longer applies to their 800 Mhz systems which are defined
by the FEDERAL Communications Commission (note federal supercedes
local government terms and definitions) as UHF systems, or spelled out
as Ultra High Frequency which are not covered by HF receiver prohibitions
since they are a different radio spectrum. Ironically, they have always
used UHF, even if 400 Mhz range, hence the law is meaningless. The law
enforcement in Chattanooga does not use HF as far as I know.

Terms - VHF is 30-380 Mhz, UHF is 380 Mhz to someplace above 900 Mhz.
HF is 0-30 Mhz. I can see why they've probably never enforced it,
with a good lawyer, the city would be made to look like quite a fool,
as I do not believe they have ever operated below 30 Mhz. It is
clear of the mentality and radio education of the person who created
the law. Foolish city official(s) ...

2352. Amateur Radio Testing / Skywarn

Yahoo group: chattradio
Date: 2004-08-24 16:10:43 UTC
From: Christopher J. Palmgren
Topic: 2352 Message: 2352

The Chattanooga Amateur Radio Club meets on the first Friday of each month (except July) at the Chattanooga Chapter of the American Red Cross on McCallie Avenue. Testing usually begins around 6pm and the regular meeting starts at 7:30pm.

You can contact Art Perry WB4BGX at 886-4714 to let him know you'll be there to take the test. He can also tell you how much the examination fee is (usually not much).

Also, you're welcome to join the Ocoee Amateur Radio Society. We meet the first Monday of the month at the Cleveland-Bradley County Rescue Squad Building, unless otherwise announced. Sometimes we'll hold eat and meets at various restaurants in the Cleveland and Chattanooga areas. We have an online forum on the yahoo group.

Chatt. ARC: http://www.qsl.net/w4am
Ocoee ARS: http://www.qsl.net/wd4oar

The Skywarn class is usually held during the regular February program at the Chatt. ARC meeting.

73,

Chris
W4ORS

2353. RE: [chattradio] Mobile Scanning

Yahoo group: chattradio
Date: 2004-08-24 23:19:54 UTC
From: Jonathan Guy
Topic: 2338 Message: 2353

Please read the actual piece of city code presented, the 'definition' is presented for the use of this particular document and has no regard for 'FEDERAL' definitions. The FEDERAL definition is what will allow an amateur operator to use a radio capable of monitoring police radio stations. Could this piece of city code be worded a little better, sure, but it still serves its purpose, and this code was updated in 1986, while CPD was on UHF, to cover transmissions above HF.

A "high frequency police radio receiving set" shall be defined as any radio receiving set capable of receiving any message sent out by any police radio station.

The Amateur Radio license should take care of the scanner issue. Quoting the actual differences between HF, VHF, UHF, etc will only result in the nice Officer nodding his head at the babbling scanner owner as he confiscates your radio to turn in to the property division.

I think its also important to note that common sense and attitude make a hugh difference in what happens. If you happen to be stopped by local law enforcement, have the common sense to turn the scanner off. Now, just turn it off, don't be fumbling all over the place, trying to stick it under the seat and hide it, wondering why it won't fit, wishing you'd thrown out that fast food plastic cup, and continuing to bend over attempting to place it somewhere else. I will guarantee this will result in your being brought out of the car at gun-point by multiple officers in a felony traffic stop. Not because the Police want to be mean to you, but past experience has shown people that act like this are often hiding or retrieving a firearm...and the Officers want to go home to their families at the end of their shift.

It also won't be of any benefit to you for the Officer to be standing at your window and hear his radio traffic in stereo...especially when he keys up and suffers feed-back from your scanner...not to mention that you have now really ticked off the dispatcher for providing that lovely racket in their ear...and the dispatcher has that nice little computer that can run you 6 ways from Sunday...they can do stuff with that computer the Officer never thought possible.

The alternative is to roll the window down, turn on the dome light (if its dark), place your hands in plain view for the Officer, SMILE, and say, "Good evening Officer."

Now, the right attitude might even prevent a real ticket and get you a warning instead. YMMV. I will say that if the person stopped gets a real attitude they can easily talk themselves into a citation.

I know there are dozens of "jail-house lawyers" out there that will disagree with what I've said above, and that's their right....but since they're

referred to as "JAIL-HOUSE Lawyers" I'm of the opinion they aren't that good and need new representation...

-----Original Message-----
From: Steven Bradley [mailto:steven@...]

It also no longer applies to their 800 Mhz systems which are defined by the FEDERAL Communications Commission (note federal supercedes local government terms and definitions) as UHF systems, or spelled out as Ultra High Frequency which are not covered by HF receiver prohibitions since they are a different radio spectrum. Ironically, they have always used UHF, even if 400 Mhz range, hence the law is meaningless. The law enforcement in Chattanooga does not use HF as far as I know.

Terms - VHF is 30-380 Mhz, UHF is 380 Mhz to someplace above 900 Mhz. HF is 0-30 Mhz. I can see why they've probably never enforced it, with a good lawyer, the city would be made to look like quite a fool, as I do not believe they have ever operated below 30 Mhz. It is clear of the mentality and radio education of the person who created the law. Foolish city official(s) ...

I guess you haven't priced a "good" lawyer lately. A decent lawyer will charge you more for an hour of court time than Uniden does for a digital scanner.

The same scanner statute was adopted by a few cities in our region, including my local Charlotte (N.C.) during the early 60's. I might guess the original version was a handout at a police chiefs' convention, or part of a law enforcement publication.

I agree with Jonathan's comments, except that I wouldn't expect an amateur radio license to protect you if an officer decides to cite you under the statute ... particularly if you are listening to a scanner (as opposed to an amateur radio with some public safety frequencies programmed in), and cannot show an affiliation with RACES, ARES, etc.

In case you read the above and are saying that officers don't know what RACES or ARES are, keep in mind that public safety personnel is a growing segment of the amateur radio community.

Jeff Multer
Fort Mill, S.C.

2355. Re: Mobile Scanning

From: ke4aik
Topic: 2338 Message: 2355

Jeff is right, let me clarify that in TN as a member of RACES you can get a personalized Emergency license plate with your ham call. That should make the officer stop and think. Even if you are issued the citation, etc., you'll have a leg to stand on in court if you possess a valid amateur license.

Jonathan:

I am a lawyer, but not a jail house lawyer.
Early yesterday morning, at about this same time, I seriously considered sharing some comments, but then I remembered the often quoted advice that free legal advice is usually worth what you paid for it. Actually, there's no longer any need for me to comment. You've said everything I intended to say. This is one of those many areas where a little bit of common sense goes a lot further than a lot of legal knowledge. Well said!

Jeff is right, let me clarify that in TN as a member of RACES you
can get a personalized Emergency license plate with your ham call.
That should make the officer stop and think. Even if you are issued
the citation, etc., you'll have a leg to stand on in court if you
possess a valid amateur license.

2358. ARRL: Southeast Repeater Association Board Okays Mandatory Repeater Tone Policy

Yahoo group: chattradio
Date: 2004-08-28 00:14:18 UTC
From: Christopher J. Palmgren
Topic: 2358 Message: 2358

Southeast Repeater Association Board Okays Mandatory Repeater Tone Policy

NEWINGTON, CT, Aug 27, 2004--The Southeast Repeater Association (SERA) Board of Directors has approved an "all tone, all the time" policy for the repeaters SERA coordinates. SERA provides voluntary frequency coordination for amateur repeaters in eight states. The Board's action came on a motion from Mississippi Director Steve Grantham, AA5SG, that SERA amend its coordination policy and guidelines to require CTCSS or DCS receive and transmit tones on all new FM voice repeaters. Existing voice repeaters will have until July 1, 2006, to comply. The SERA Repeater Journal reported the move in its August issue. Repeater Journal Editor Gary Pearce, KN4AQ, said a need to relieve interference complaints led to the Board's decision.
"The point is to stop the ongoing complaints and skirmishes between co-channel neighbors running carrier-access repeaters," Pearce explained. "The vote was unanimous, but SERA recognizes that tone isn't universally popular nor is it a cure-all. And it causes new problems, particularly for travelers."
South Carolina ARRL member Laurie Sansbury Jr, KV4C, would agree with Pearce on that score. He has taken issue with SERA's new policy and with Pearce's Repeater Journal "SquelchTale" editorial, in which Pearce said he had "little sympathy for the ham whose radio doesn't have a tone encoder" and "Radios are cheap today."
"Not for the senior on a fixed income they're not," Sansbury retorted in an e-mail copied to ARRL. "Not for a teenager--the future of ham radio--they're not."

ARRL South Carolina Technical Coordinator Marc Tarplee, N4UFP, raised the issue of the potential impact of SERA's tone policy on emergency operations. "The Amateur Radio Service is expected to provide emergency communications," Tarplee said. "How does broad CTCSS implementation enhance or hinder our ability to deliver those communications?"
ARRL member Mark Cobbeldick, KB4CVN, of Monroe, Virginia, said requiring CTCSS tone to access a repeater on the 10-meter band has been the topic of several discussions on the 10-meter FM reflector. "It appears the SERA has taken a step in this direction," he said. "By having both encode and decode tones on a repeater, this will help reduce interference during band openings." He also suggested designating CTCSS tones on a state-by-state basis, "with a primary tone and several alternates."
Pearce notes that while the SERA policy applies to repeaters on all bands, the problems it aims to resolve most frequently involve 2-meter machines. He says SERA already has a tone plan for 10 meters. SERA coordinates repeaters in Georgia, South Carolina, North Carolina, Kentucky, Tennessee, Mississippi and parts of Virginia and West Virginia.
SERA has no plans to automatically decoordinate repeaters that continue to

operate without tones, but "SERA would not entertain an interference complaint from the owner of any repeater who chooses to remain carrier access," the Repeater Journal said. If a carrier-access repeater owner getting co-channel interference complains to the FCC, SERA would tell the Commission that the complaining repeater's owner was opting to operate outside the conditions of coordination. "SERA would expect that to be interpreted as a 'no,'" the Repeater Journal report said.
"If a repeater owner wants to complain about interference, they'll have to incorporate tone first," Pearce said.

>> I recall a story in QST,CQ or 73 a few years ago....an Amateur op in New Jersey(I believe it was) got into legal trouble for posessing a scanner in his vehicle...the ARRL provided lawyers for his defence and won the case....something about Federal Law over Local/State law...anyone remember more specifically?

New Jersey's original scanner law was rewritten about 1990, allowing anyone to operate a scanner in a motor vehicle. Previously, the law forbid scanner (receiver) use in motor vehicle without a permit, which were not available to the general public. Under N.J. Motor Vehicle Code, even use on a pedal-powered mode of transportation (ie. bicycle) was illegal.

When I commented in earlier posts, I commented in part based on my past experience of being convicted under N.J.'s old scanner law - a high misdemeanor in that state in 1979. $200 for a public defender, one-year of probation, and a set of fingerprints that will forever reside with the State of N.J. and the F.B.I. ... unless I want to spend $1,000 + for an expungement of the records.

The power to create laws regarding the public airwaves was originally intended to be a federal power, but the F.C.C. has been weak to enforce its authority over some telecommunications-related issues. Things have improved in recent years, as amateurs have moved to fight overly-restrictive zoning laws and home owner association covenents, and restrictions on use of equipment in motor vehicles.

2361. Fw: URGENT - TN ARES Activation

Yahoo group: chattradio
Date: 2004-09-03 05:07:42 UTC
From: Christopher J. Palmgren
Topic: 2361 Message: 2361

PLEASE READ THIS ENTIRE MESSAGE

TN ARES has been officially asked by TEMA to activate in stand-by status for the imminent landfall of Hurricane Frances.

TEMA estimates TN will receive 30,000 - 70,000 evacuees from the south and possibly an additional 50,000 - 100,000 evacuees from the east, if the storm makes landfall in the Carolinas. Assistance needed may include general communications, shelter communications, traffic, etc. Please be ready to provide whatever service any of our served agencies requests.

All hotels in GA are full and, due to the many events going on in TN this weekend, many TN hotels are also full. TEMA anticipates the probability of opening shelters to house the evacuees. All of The American Red Cross Offices in TN will be manned this weekend in preparation. All ECs are asked to make contact with their local Red Cross Friday so that the Red Cross can easily contact you for assistance as needed.

As the storm moves inland, depending on the direction it takes, East TN could receive as much as 15" of rain or Middle TN could receive as much as 20" of rain. In addition to preparing to assist Red Cross and other agencies, it is important that we also prepare for the direct effects the storm will have on our own state. Please take the time now to prepare your emergency kits and your families for the weather events we anticipate. Remind your members to be sure your batteries are charged, your radios are programmed & take your manuals with you!

Some of you or your members may wish to volunteer in the hurrican-struck areas. At this time, it is impossible for me to provide any contact information. When it is certain where landfall will occur, contacts and arrangements can be made. Please remind all members that no one should "just show up". It is very important that volunteers are coordinated through the EC in the disaster area (or through the SECs). I will try to provide contact information to all of you when it is available. Please remember that some of us are going to need to remain here to handle events in our own counties. We will most likely experience some significant flooring etc.

*** It is critical that anyone who is able please contact Jimmy Floyd, NQ4U to offer assistance with the HF nets if/when activated. There could be a heavy load of traffic generated by this hurricane, and Jimmy can not monitor or call a net for the entire duration of the event. I would like to ask each EC to please provide a potential relief NCS. If you e-mail the information for relief NCS to Jimmy, please copy me and your ASEC on the e-mail.

Although most of your communications will be local and on UHF/VHF, please ask your HF liaison to monitor HF as possible. There may be TN traffic that needs to be passed in addition to traffic from FL, GA or the Carolinas. The HF frequencies for TN are 3.980 and 7.238. Hurricane Net freq: 14.325

Please use your preferred method to activate your group in stand-by mode. Again, we are officially requested by TEMA to activate in stand-by mode AT THIS TIME. ASECs, please be sure your DECs are notified; DECs, please be sure your ECs are notified. Please let your DEC / ASEC know when you have activated your group (in stand-by).

Thank you all in advance for the wonderful job I know you will do of providing the services our served agencies request of us!

(TEMA request follows)

73,
Sheila, KB4G
TN SEC

From: Hank Koebler, Jr TEMA Lead Planner

To: Sheila Dziubak, TN Section Emergency Coordinator

Date: Sep. 2, 2004

Subj: Request for Amateur Radio Emergency Services Assistance

1. TEMA requests that ARES members be placed on stand-by for this weekend and possibly extending into the middle of next week in anticipation of response to Hurricane Frances.

2. Hurricane Frances has caused the evacuation of a large number of residents from Florida. Many of these people are already enroute to TN, having found that there are no hotel rooms available south of Marietta, Ga. as of 4:00 p.m. today. FEMA's projection is that anywhere from 30,000 to 150,000 people could seek shelter in TN. These numbers could increase if South Carolina and North Carolina implement their evacuation plans, putting an additional 100,000+ people enroute to TN.

3. Due to a wide variety of pre-planned activities this weekend, such as a UT game, a Titans game, a religious convention, the Walking Horse festival, a Vanderbilt game and several other events where a large turnout is expected, motel rooms in E. TN and in Southern Middle TN are scarce. Therefore, TEMA has arranged with the American Red Cross to open shelters as it becomes necessary, using the same shelter plan as would be used in the event of an incident at the Seqouyah Nuclear Power Plant. If these shelters are opened, it is anticipated that ARES will be needed by the ARC to provide communications. In addition, Health and Welfare traffic will be more than likely necessary once the hurricane passes through Florida itself.

4. There may also be significant traffic tie ups on major interstates, particularly I-75 coming up out of Georgia. The evacuees will most likely continue up I-75 or go up I-24 looking for motel rooms. TEMA anticipates major usage of rest stops, and may request ARES assistance at the rest stops or other areas of major traffic congestion.

5. In addition, there is a significant possibility that the storm will center over central Georgia or Alabama once it passes through Florida.

In either case, a large number of TN counties will be subject to flooding, and ARES assistance may be needed then.

6. Please advise all your ARES members to make appropriate preparations to be ready to assist if called upon. The capabilities and support provided by ARES is significant and is greatly appreciated.

Master Joe wrote:
>Someone probably posted this same question when Hurricane Charlie blasted
>through, but where can I find some good HF hurricane monitoring freqs?

For what seems like the forty millionth time this hurricane season ;-) (remember I get hundreds of phone calls here in the MT office):

The best, most complete and most up-to-date list for hurricane monitoring frequencies is on MT columnist Hugh Stegman's Utility World website. You can go directly to http://www.ominous-valve.com/hurricne.txt or we have a link to it on the Monitoring Times website on our huge Reference Library page. You will also find a link in that Ref Library to our huge "HF Hot 1000 frequency list" that has a lot of freqs that are productive in hurricane monitoring. As far as Hugh's list goes if you find any other list on the net is it usually an old, old version of his list (you can recognize those cause they still list MacDill on 11176 and the old HF Hurricane Hunter freqs).

There are three things you need to remember about hurricane monitoring:

1. Hurricane Hunter no longer pass detailed reports on HF. This is done digitally via secure UHF Milsat channels and can not be monitored. You can see their detailed reports on the www.nhc.noaa.gov website. All the old Hurricane Hunter freqs are history. After Andrew when the new NHC was built, those old HH HF antennas were not reinstalled. The only HF capability that NHC has today is ham radio, period!

2. You will occasionally catch the Hurricane Hunters doing phone patches for the media aboard and to the media on the USAF MARS HF aircraft phone patch net primarily 13.927 MHz USB. You will find the other freqs that could be used at other times of the day or night on the WUN club website (below) in my monthly MLA (this is our large HF Military/Government frequency list) column in the newsletter.

3. The best live reports will be heard on the Ham Hurricane Net (14325 kHz USB).
http://www.wx4nhc.org/ Ham National Hurricane Center shack
http://www.hwn.org/ Hurricane Watch Net
Disaster aid and health and welfare traffic is done on the SATERN HF Net on 14.265 USB. Their website is http://satern.org/ecom.html

To Jason and.or Ary can we please add this to the WUN FAQ. We get this question much to often on all the various monitor list to not add this to that listing. Maybe we can put it on someplace prominent on the WUN website (www.wunclub.com) as well. 73 all and to all my very close

monitor friends in Florida, Gayle and I have you in our prayers. Please stay safe. Now maybe my phone won't ring off the hook this afternoon.

Subject: [oars] 40 meter Tennessee ARES net at 1:00 tomarrow , and local net mandatory

The amount of rain expected for TN as a result of Hurricane Frances has been lowered to about 8". Although this is about half the amount originally estimated, it is more than enough to cause serious problems for many of our counties.

Please remind your liaison stations for the net tomorrow to be on the air on time and remain the entire time so that they may take note of any announcements etc and bring the info back to your group. Tomorrow we will be looking for a total number of stations available and on stand-by without regard to affiliation. When your liaison checks in, they should give only their call, the total number of stations on stand-by and pertinent information if any of the stations are activated on behalf of a served agency (is anyone currently providing communications for an agency), i.e. how many stations are active and which agencies are being served.

If your group is activated to provide communications for a served agency, please be sure to keep records on all formal traffic passed.

I need to receive reports from each EC before Sept 10 on this event. If your group activated to stand-by level and was not activated further, please report that to me along with the actual number of stations activated to stand-by, traffic passed etc. Your DEC and ASEC also need to be copied on the reports.

I plan to be home most of the weekend and I will monitor various HF frequencies (TN, FL, GA etc) as well as the MTEARS linked system. I will also run AIM when I can. My screen name is KB4G, and required authorization.

Thanks for your help! 73,
Sheila, KB4G

2365. Whose Jail?

Yahoo group: chattradio
Date: 2004-09-13 17:04:00 UTC
From: Richard L. Elliston
Topic: 2365 Message: 2365

I have found a correctional/detention facility operating on 153.635 mHz. Probably the new Bradley County Justice Complex. They are using a repeater on this frequency. Signal is fairly weak in Charleston area, requiring outside antenna. Signal is much stronger in downtown Cleveland area. FCC database says this is an Eaves frequency, with transmitter located on Oswald Dome in Polk County. However, I suspect that a repeater has been installed somewhere close to the new facility.

2368. Athens police radio system first of its kind in state

Yahoo group: chattradio

From: Larry Wilson
Topic: 2368 Message: 2368

http://www.dpa.xtn.net/index.php?
template=news.view.subscriber&table=news&newsid=114954

New city police radio system first of its kind in state
By: BECKY BANKS Staff Writer
Source: The Daily Post-Athenian
09-21-2004

New equipment is stepping up the level of communications in Athens and making it among the first in the state to do so.

With a $22,000 Homeland Security grant, the Athens dispatch center has purchased the Raytheon JPS ACU1000. This system allows for interdepartmental communication without the phone tag. It is one of the first such systems to be installed in the state, and several other cities have shown an interest, said Athens Police Chief Chuck Ziegler A click on a computer screen by a dispatcher allows departments to have direct contact on the same frequency. A few more missing pieces could come in as soon as next week to have the system fully operational.

"What this equipment does is it allows the dispatcher to connect any
group of people in the system," said Athens Police Chief Chuck Ziegler. "Right now, we have eight groups in the system. Any or all
of these people can be connected to talk."

Utilities, firefighters, medical services, public works and police officers comprise the eight groups.

In the past, Ziegler said, if a person from one agency wanted to speak to another agency through handheld radio systems, the person would call the dispatcher, who would in return call the other agency's dispatcher who would contact their own personnel. Direct contact was not available. The one line frequencies did not give the accessibility that the ACU1000 provides.

"In all honesty, I feel like this is one of the most significant pieces of technology that we have ever been able to provide for the citizens of the city of Athens," Ziegler said.

The equipment, he said, is only for severe emergencies.

One scenario he offered was if Athens had a large fire, and interdepartmental communications would be vital. It would allow for AUB to take care of damaged power lines and medical services, and the police and firefighters could communicate with one another in a more efficient manner to access and react to the situation.

"We're looking at using the ACU1000 for the number one thing that
would happen: a severe storm, tornado, flood or a major fire; on a daily basis," Ziegler said. "Secondly, if we were to have an accident
in the county and the city is requested to back up the county we could use it to provide interoperable communications with the county agencies. Thirdly, we can use the ACU for multi-agency response on a regional level for Watts Bar."

There are seven various frequencies that departments can interact on in the system. A box on the screen represents an agency. By a dispatcher pulling a box down the screen to a line, two or more can be put on one line, or, if a major announcement needed to be made, all departments could be put on one frequency.

The need for this type of equipment has become more prevalent since the Sept. 11 terrorist attacks in 2001, Ziegler said.

Right before the second tower collapsed, police officers were exiting the building while firefighters were entering it. Officers were stopping the firefighters to tell them their dispatcher had told them the tower was going to collapse. Several firefighters said they had not heard any information on that and were going to proceed.

Because of the lack of communication between departments, significantly more firefighters lost their lives.

New York had actually purchased the ACU1000, but it had not been installed and was lying in a warehouse, Ziegler said.

Interoperatability became a catch phrase after that, and Tennessee Gov. Phil Bredesen encouraged higher quality, larger radio systems in the state. Ziegler said he looked into one such system and the estimated cost for Athens would have been $1.5 million. The ACU1000 appeared the better alternative.

2369. Antenna & Mounting questions

Yahoo group: chattradio
Date: 2004-09-23 10:52:37 UTC
From: John Hunter
Topic: 2369 Message: 2369

Hi everyone, I've been looking around for some help on how to mount my Radio Shack Discone antenna and have some questions...

1)can I use RG-6U 75 ohn cable or do I have to use RG-58. I have a huge roll of the RG-6u cable and since I'm on a tight budget I was wondering if the ohm mismatch would cause any problems.

2) I use a Radio Shack Pro-2006 and a Radio Shack Pro-2052 scanner and have been using the Scan Control software from http://www.scannersoft.com/ and would like your opinions on this software. Chattanooga area DAT files would be nice too as I have a little trouble seeing the monitor to type all that in.

3) I am planning on having my nephew mounting the Discone on the end of a 30 foot mast that will be anchored to the eave on the right side of the house. Do the antenna and mast both need to be grounded? If so any recommendations on the best way to do this? How do you mount the mast to the ground so it stays in place?

4)Finally..I have a much larger un opened Radio Shack scanner antenna that I bought about 5 years ago and it has since been discontinued. Would there be any advantages to mounting them BOTH on the same mast and hooking them together with a coax "T" fitting and patch cable?

Sorry for the huge list of questions but I am trying to make a setup that will give great performance as well as being safe and trouble free for a long time. I'm lucky to have a nephew who doesn't mind running wires for my various radio hobbies as I am disabled.Thanks for any info that you can send my way.
Sincerely,
John

What ever you do don't use RG-58. You will lose 95% of an 800 MHz signal in RG-58 coax. RG-8X is not much better and RG-8 is so close to RG-6 I'll take the thinner stuff everytime. As for that mismatch, no receiver, transceiver, or transmitter will exhibit 50 ohms through its entire tuning range. If we were talking 100 ohms or more, I think I would be concerned. You won't notice any degrade in signal because you are using 75 ohm cable. My entire shack runs on RG-6 including all of my ham equipment. I even use the RG-6 on VHF/UHF ham bands with great results.

But don't trust me. Look at the intro material in Police Call (yea that stuff that scanner folks never read). ;-) You will see it spelled out there also. We have done many articles in MT on this over the years. But the proof is sitting 1 mile from here at my home shack.

3) I am planning on having my nephew mounting the Discone on the end of a 30 foot mast that will be anchored to the eave on the right side of the house. Do the antenna and mast both need to be grounded? If so any recommendations on the best way to do this? How do you mount the mast to the ground so it stays in place?

You ground he antenna that is were your signal will go. Ground the mast but definitely NOT the antenna unless you want to monitor static.

4)Finally..I have a much larger un opened Radio Shack scanner antenna that I bought about 5 years ago and it has since been discontinued. Would there be any advantages to mounting them BOTH on the same mast and hooking them together with a coax "T" fitting and patch cable?

Nope. Don't do it. You will gain noting. Save that antenna for another scanner. Co-phasing antennas is an old CB myth. In the real world you cannot phase two disimiliar antennas.

Sorry can't answer the computer question.

Forwarded message from Andy Masters, NU5O:

73 de W4ORS

###

Hello. My name is Andy Masters, NU5O, and I serve as the Tennessee Director for SERA. I have been a ham since 1966, helped put the first repeater on in Jackson, TN back in the 1970's and at one time was the driving force behind the VOLNET-a group of 10 repeaters linked full time over a wide area. Currently, I maintain 3 UHF repeaters in Memphis, including one that has 4 voting receivers. I also assist small groups in planning, tuning, and installing their new repeaters.

I have been asked by a great number of TN repeater owners to comment on the mandatory tone policy that SERA has implemented and I have chosen to do so through Sam, WM4T. I don't always agree with Sam's view on things but I always know where I stand with him and I hear his views directly-not from some other direction. For that reason, I respect him and appreciate him.

The short version is that I am against a mandatory tone policy for two meters and I will not support it or enforce it except when the repeaters are short spaced and/or a clear operational advantage is gained by using tone. An example of that would be a new repeater in a mountainous area. Users often hear other co-channel repeaters well over a hundred miles away but the signal is so weak it just breaks the squelch. By using tone, the group(s) have an opportunity to use CTCSS and get rid of the annoyance. It's not interference per se-but it is an annoyance. Several of you in East TN have written to me since this issue came up and have stated that is why you like tone.

Having said that, I want also to state clearly that the discussions that brought about this decision at the June SERA board meeting were based entirely on user complaints and a desire to help get more repeaters on the air. There was NEVER an attitude of "let's shove it down their throats" at the meeting. In fact just the opposite was the case. Since 9/11 there has been a great demand on the spectrum (especially 2 meters) for new repeaters. Most of those requests are coming from rural areas where hams want to install an emergency powered repeater to be able to respond to a crisis in their area. Is that a bad thing?

It is obvious that SERA did not handle the announcement of the decision well nor did it handle the outcry of repeater owners properly. I and others did try to reverse the decision but as of this writing it has not changed. While a few of our board members seemingly do not care whether members comment or not others do in fact care. You will have decide where your own directors stand and act accordingly.

Interestingly, SERA already requires the use of tone on 10 meter and UHF repeaters (CP&G Policy 14G...). To my knowledge not a single ham has ever complained about this policy. It seems the real issue is that the coordinating body made a decision that significantly affects the membership without first asking for input from the membership and that is the key issue. Some of the directors are ok with that but I am not. I do apologize to the repeater owners of Tennessee for our decision to make this policy mandatory without seeking input first. I did suggest to the board as a result that SERA change its by-laws to require two meetings to change a policy that seriously affects repeater owners in order to allow a comment period but it was voted down.

It would seem there are at least three options left to repeater owners and users:

1. Do not renew your membership in SERA until the policy changes.
2. Renew your membership in SERA, read carefully the by-laws section of SERA on the website and pursue the election of individuals that will represent your views. Bear in mind that several states have had almost no complaints about this new policy in the SERA group.
3. Renew your membership and maintain the status quo.

Personally, I choose to remain a member of SERA and to continue to try and persuade the organization to be more responsive to its members feelings. It still remains the best coordinating body in the USA. All of the member states that surround Tennessee take each new coordination seriously-using our new ComSoft software to determine the actual coverage of a repeater and whether or not it will work. We have successfully placed a number of repeaters on the air with minimal issues as a result. We have denied far more as a result of the software because we could prove in advance that serious issues would arise as a result of the coordination.

We are not perfect. Many of our detractors however would soon find themselves unhappy in any coordinating body. Unbelievably, some of these people think that they can own a repeater frequency for eternity and it will always be their's even if it has been off the air for several years. Others will move their repeater many miles and just plop it down wherever they want thinking that location has nothing to do with coordination. While those groups are highly verbal in situations like this and do a lot to muddy the water-I believe most repeater owners would soon find them to be unwelcome guests in any coordinating body.

I did propose changes to the CP&G in the June meeting that were also approved that will allow us to go after paper, dormant, and un-coordinated repeaters. These repeaters are keeping good ham operators from putting repeaters on the air in their area and they know it. If you are aware of a repeater in this category in Tennessee, I want to know about it.

Below is an excerpt from the letter that will go out to all TN repeater owners this fall from SERA. The data sheets are critical to the coordination process. PLEASE PARTICIPATE! You don't have to join SERA to send in your data sheet but please send in the data sheet so we can have an accurate census of repeaters.

Again, I do sincerely apologize to the amateurs of Tennessee for the implementation of the tone policy without first seeking input and gaining a better perspective on the issue.

Sincerely,

Andy Masters NU5O
TN Director SERA

SERA DATA SHEET LETTER FALL 2004:

Greetings fellow Tennessee repeater owners from your SERA State Director. A lot has happened this year in the State of Tennessee with repeaters and with SERA.

Let me introduce you to the SERA coordinators for the state. First, in East Tennessee, is David Fridley, KG4FZR, as a new Coordinator and Assistant Director. David owns a tower company and is well versed in communications and ham radio. Next, in Middle Tennessee, is Jerome Buie, KB4POA, who also serves as Coordinator and our Vice Director for the state. Jerome is in traffic control communications and has a truck that looks like Fibber McGee's closet (it's full of stuff). Last, in West Tennessee, is Alan McClain, KA4BNI, who works in communications for the state and serves as a new Coordinator and Assistant Director. Tim Berry, WB4GBI, resigned from his post as State Director in January due to extreme business obligations. He is one of those guys who works 80 hours a week. I agreed to be State Director only if he would remain as an Assistant Director-which he has agreed to do. Tim now serves as a Technical Assistant Director and we are very fortunate to benefit from his experience. You may review the biographies of each of these fine gentlemen at: www.sera.org

The events of 9/11 have put a great pressure on our state and those surrounding us in terms of demand for new repeaters. This demand has driven several decisions by SERA to help alleviate some of the pressure. Some of the decisions are welcomed and some are not. First, at the June board meeting this year, I made several proposals to change the CP&G of SERA to make it easier to de-coordinate repeaters. There are a significant number of "paper" repeaters in Tennessee. We have people who actually think a repeater can be off the air for 20 years and somehow they have a right to that frequency. Some people think they can move a repeater 20 miles or more from its current location without re-coordinating it first. For those of you sitting on paper repeaters and uncoordinated repeaters-we are coming after you. Every month I receive requests from rural groups in Tennessee wanting a repeater frequency. Currently, there are no 2 meter pairs available in state. These groups are angry because they know of paper, dormant, or uncoordinated repeaters in their areas that are keeping them from a legitimate frequency pair.
As State Director, I believe it is my responsibility to serve the person seeking a new repeater for his area and not the guy who refuses to participate in the coordination process, never put the repeater on the air, or failed to maintain his repeater and never put it back on the air. This is a no brainer. I am going to help the new group every time. It is a fair and consistent policy and it better serves the needs of our amateur

community.

Tones. At the June Board Meeting, SERA adopted a new mandatory tone policy. I don't like it and I will not enforce it. The policy was adopted in an effort to address complaints from several users over interference issues. It was NOT an attempt to shove anything down the member's throat. However, it was poorly handled, done without consulting the membership for comments, and generally will cause hardship and expense to a lot of repeater owners. I do agree that short spaced repeaters and certain other co-channel repeaters should be required to have tone-but not all repeaters. I will continue to insist we use tones under the previous guidelines set forth in the CP&G.

I am not happy about the way the board has chosen to respond to the issue of soliciting input from the users and making decisions that significantly affect our members. I have voiced those complaints to the board as many of you have. I encourage you to continue to voice your thoughts. SERA does not have a right to autocratically do things to the amateur community without input from the same. It is supposed to be our organization and when you agree or disagree with policies-you should let somebody know. Many of you have told me that you will not be joining SERA again until this way of doing business changes. I can't blame you and I understand your feelings.

Regardless of whether you choose to join SERA or renew your membership, I do ask that each repeater owner fill in the data sheets and return them. Good data is the only way we can do a proper job of coordinating. If you have any changes you need to make on the data sheets and you have questions-do not hesitate to write me at: nu5o@...

If you know of repeaters off the air, paper repeaters, uncoordinated repeaters, please write me with the details. Recovering these frequencies means some rural group will be able to put their repeater on the air. It is the right thing to do. If you have a repeater that is no longer on the air-talk to me. I will work with you if you need some time to get it on the air but I also encourage you to consider turning it back in to the pool and saving us a lot of trouble de-coordinating your repeater.

A word about service. All of our coordinators are good people. They are also busy people. They do this work voluntarily. They are not paid a penny for their time. However, if you are not getting timely service, I want to know about it. I promise you, I will address your issues regardless of whether you are a member of SERA or not.

John,

A couple of thoughts, as I use a 30-foot Channel Master 3-section mast at home (available at Lowes Home Improvement stores, in the TV / telephone area).

I buried the base of the mast 6-feet in the ground, and secured with concrete. Although I fashioned two braces to secure the mast near a corner of the soffet, similar brackets are available in a couple of stand-off lengths from Radio Shack.

I did mount the mast to the back side of the house from the direction we get most wind gusts from, and I lower the mast during events like Frances and Ivan.

When you mentioned a "much larger" discontinued Radio Shack antenna, I'm picturing their ground plane, with three radiating elements ... the tallest being 4-5 feet, and three reflectors of about 6-feet. I have one (model 20.216 ?), and have tried it on the mast under an Icom discone, and was disappointed with the results. I think part of the problem was that antenna was too close to the roof line.

From: tosborne37914
Topic: 2376 Message: 2376

The foloowing release has been published in the September 2004 issue of Mobile Radio Technology:

"Nextel Communications announced it has been awarded a ten-year contract from the Tennessee Valley Authority, the nation's largest public utility, to provide in-building wireless coverageand outdoor site coverage to fifteen TVA facilities across three states.it was Terms of the deal were not disclosed.
Nextel said it was chosen by the TVA to replace the utility's legacy wireless communications systems in response to the Federal Communications Commission's narrow band mandate for two-way LMR systems. When the project is complete, more than 3000 TVA handsets will be on Nextel's network, the carrier said, adding that the network would provide interoperable communications not only across TVA's facilities, but also with police, fire, and other government agencies in the three-state region."

Two observations:
1. While Nextel may not have felt at liberty to disclose the terms of this contract, those terms are probably discoverable in view of TVA being a public agency.
2. The legacy Wireless systems referred to are probably regulated by NTIA, not FCC, as TVA is a federal government instrumentality. Any narrowband mandate would be that dictated by the NTIA, not FCC.

Sequoyah is already using these radios to a great extent, so that there is almost no traffic on the old plant repeaters any more (alas!) However, the reliability has been less than stellar. Many dead spots in the plant have been found. The radios can't be used in some areas due to RFI concerns, which was true of the old radios as well, however the new radios were highly touted at the beginning as "RFI free". Anyone with a little savvy knew better than that! And, there's the small matter of $30 per radio per month in perpetuity..... New conventional radios with narrow bandwidth would have made much more sense, but since when do we associate sense with TVA management?

1. For scanner and radios with receive only functions impedance mismatch is not a problem. Use what you have.

2. I don't have any RS scanners so I can't help you with software. What format does it like the data files in? I make my data bases listing on a spread sheet then cut and paste or retype by hand the list depending on the software I'm using. The database let's me sort and arraign freqs as I think works best with out retyping everything.

3. If the antenna is physically attached to the pole by metal then the antenna will be ground if the mast is grounded. You need to run a 12 or 14 ga. wire from the antenna mast to a ground source. The ground can be a cold water pipe, an outdoor faucet, or better still you can drive an 8' copper ground rod into the ground. You can get clamps at a hardware store or RS. to attach the wire to both mast and ground.

4. Don't connect the two antennas together. The may create a directional pattern to the antenna. It may also cancel out certain freqs you want to scan. Using two antenna together is a science. Each antenna has it own strength's. Depending on each antenna's best use you may want mount both antennas and assign one scanner and one set of freqs to a particular antenna. You can buy a switch to go between them if you have only one scanner, but don't use a standard cable box switch to do it. You need isolation in the switch so the two antennas don't interact. Ham operator have isolation switches.

If you are trying to listen to the Chattanooga trunked system, two possibilities come to mind.

First, you might have locked out the control channel. Try manually stepping through your programmed channels, and listen for the control channel. When you hear it, make sure that memory channel is not locked out.

If you don't hear a control channel in any of the memory positions, you don't have the control channel frequency programmed in the scanner.

I believe I remember reading on this list that the control channel frequency recently changed as part of a system upgrade. Look through the recent posts to the list for more information.

I have the following two units for sale.

1. Motorola MTX800 radio. Includes Motorola shoulder mike, belt clip, desk charger.
Radio is bruised up a bit, but still works great. Battery getting old, but still holds 4-6 hr. use charge. Shoulder mike is like new Motorola and it greatly enhanced the transmission quality for this radio. Desk charger in great condition.
I have had this radio a couple years and never have had the first bit of trouble out of it.

2. Kenwood TK380 radio. Looks like new! Great condition. Has keypad data entry on face, 20 channels, desk charger, almost new battery (has about 2 months actual use on it.)This radio gave me wonderful service, I just don't need it any longer.

I need to sell these two items. If interested please e-mail me at "bigjimhamilton@..." and we can talk. I want to give the buyer a good deal, but I also don't intent to give them away. I will be more than fair, with the advantage going to the buyer. Make me an offer on either or both items and we can see what happens. Please, if not seriously interested don't waste your or my time.
Thanks,
Jim Hamilton

2386. Bradley Co Unit Numbers

Yahoo group: chattradio
Date: 2004-10-12 13:48:08 UTC
From: Larry Van Horn
Topic: 2386 Message: 2386

While watching the Bravos get their heads handed to them on a plate last night I stop by 155.535 to do a little work on the unit numbering system for the Bradley SO. Somewhere in my notes I thought they had changed from their old Adam/Bravo etc to a number system 600/900 units comes to mind. Well I noticed last night the only thing I heard was Bravo units and a bunch of them. Also heard what I thought was ?TF2 running 28s off of apparent traffic stops. I know they have several units and they have North and South Pcts.

Does anyone have info on the Bradley unit numbering system?

Topic: 2386 Message: 2387

The ?TF2 is DTF2. This is a 10th Judicial District Drug Task Force unit. This DTF covers Bradley, McMinn, Polk and Monroe counties, but they spend most of their time in Bradley County. They will switch over to the county freq of whatever county they are in. I heard them a few weeks ago on 155.700(McMinn Co) asking for 10-8, backup. McMinn County does not have this 10 code and the dispatcher did not know what he meant, so she sent a deputy to check it out. Backup in McMinn County is 10-38.

Larry,
I monitor these good folks almost continuously, but I honestly can't tell what the numbering system is. If you can monitor BCSO Operations on 856.4875 for a while, you're likely to hear dispatch giving the Brass a complete list of the on-duty units, by number, together with a brief description of the current activity of each unit.

FYI here is a list of McMinn county units.

100 Athens PD
200 Athens FD
400-429 McMinn SO
430-449 McMinn Correction Officers
450-469 McMinn SO reserve officers
470-499 Wreckers
500 Etowah PD
600 Englewood PD
700 Niota PD
800 Calhoun PD
900 EMS Personal

Chaplin X County Chaplins
Charlie 1 Some county unit, but I have now idea what it is- anyone
that knows this please let me know.

2391. Flash Traffic: Bradley Co EMS Frequency Changed

Yahoo group: chattradio
Date: 2004-10-14 15:03:19 UTC
From: Larry Van Horn
Topic: 2391 Message: 2391

The Bradley Co EMS dispatch has changed their primary dispatch frequency to 150.890 (136.5 Hz PL). Closer examination indicates that it appears to be part of a possible new SmarTrunk II system. Not sure of its current status but 152.435 also used the same PL tone set when Bradley was on it. I am trying to determine what the other freqs are in the Bradley Co EMS trunk system being leased to them by Eaves.

It would appear that there are at least two more frequencies athat are part of the Eaves 123.0 Hz SmarTrunk system than previously published. Here is what I have on that system right now: 150.965/157.635 151.535/159.885 152.315/157.575 152.345/157.605 152.915/160.095 152.945/157.515 153.500/159.510

Now I hope to go to work and fugure out the businesses on these channels. To bad we don't have a scanner that can track the SmarTrunk systems. ;-(

Hey all,

Gayle and I were in CHA last week (Thu/Fri) and I dragged the new BC-246T over there to give it a spin. The Close Call feature was real cool and working with the Dynamic memory management system is the best feature of all.

To give you and idea of how sensitive this baby is we first receivied the CHA 800 TRS when we pasted through Ducktown (using the Grove stealth mobile antenna). Here are a few of the new items we found (Note: Matthew these are for ye ole website if you want them)

151.655 TN Old Navy Store (Hamilton Place Mall area) (85.4 Hz PL tone) (appears to be ex-151.955)
153.935 TN KA87132 TDOT Flagman crews in the Ocoee road construction area (100.0 Hz PL tone) [Polk Co]
154.570 TN Sam's Wholesale Club (Lee Highway) (67.0 Hz PL tone)
453.775R TN KNEZ579 Bradley County Public Works repeater output (input 458.775) - McDonald (186.2 Hz PL tone)
453.950R GA Walker County School Bus net repeater output (DCS 074 tone)
464.475R TN WNJW393 CBL Management Inc Hamilton Place Mall Security repeater output (DCS 205 tone). Heard outside the mall and inside CC, talking abt Santa and the Xmas parade. No 464.425 hrd or seen on Close Call. Also did not hear or see on CC the 461.675 Maint repeater.
CBL owns the following properties in the CHA Area:
Hamilton Place Brainerd at Germantown
Northgate Plaza Hamilton Corner Hamilton Crossing Olde
Brainerd Center Gunbarrel Pointe
Soddy-Daisy Plaza The Terrace The Shoppes at Hamilton Place
58 Crossing East Ridge Crossing
Cleveland Bi-Lo Plaza South Bradley Commons

461.9625 and 464.7875
TN WPTS348 TRI COUNTY COMMUNICATIONS INC (part of a trunk system). Heard a security outfit here.
The other freqs I show as part of this system are: 451.8625 452.0125 461.4875 461.7125 461.9625 463.5375 464.7875 (I believe this was an MPT-1327 system). Guess I need to drag a WinRadio 1550 over to CHA with the trunk module. ;-)
462.6125 Unknown in the Hamilton Place Shopping Area (67.0 Hz PL tone)
462.7125 Unknown in the Hamilton Place Shopping Area
467.8125 Unknown in the Hamilton Place Shopping Area (203.5 Hz PL tone)

469.0125 Unid Kiosk in the Hamilton Place Mall area (131.8 Hz PL tone)

It was a lot of fun to play with the BC-246T. Did a nice job on the CHA trunk system. Didn't work it much do to all the other stuff popping on CC.

Hope to be back in about 3-5 weeks to pickup some stuff at Wolf Camera so maybe I can spend more time on the trunk system.

Larry - How quickly does the 246 decode the PL / DPL when using the Close Call feature (more like a Uniden 250, or more like a Pro 96?)?

Is the Close Call feature limited to detecting only frequencies within the scanner's specs for scanning / searching, or will it detect frequencies outside those ranges?

How long did the batteries hold up, and any recommendations on a cigarette lighter-to-scanner converter for this 3-volt wonder?

BTW - I appreciate your comments about the 246 on this list, and placing a copy of the scanner manual on the Grove site.

2403. BC-246T Impressions

Yahoo group: chattradio
Date: 2004-11-09 14:45:26 UTC
From: Larry Van Horn
Topic: 2399 Message: 2403

Hey all. Now that the beta for the 246T is over, I can now speak opening about the unit since I was given the honor of being a beta tester for this one by Uniden. I won't talk about the test and testing itself since that is privledged info between the testers and Uniden only. I can speak on the version that is being released and what you can expect if you buy the unit.

Jeff wrote:
>Larry - How quickly does the 246 decode the PL / DPL when using the Close Call feature (more like a Uniden 250, or more like a Pro 96?)?

Damn Fast. In fact the capability of DCS/CTCSS search is very flexible and can be programmed to an individual channel , search, CC, pre-programmed search, etc. I considered an important issue as I did the beta test for Uniden and tested it like there was no tomorrow. We no longer have to grow hair waiting for a tone display! ;-)

>Is the Close Call feature limited to detecting only frequencies within the scanner's specs for scanning / searching, or will it detect frequencies outside those ranges?

It can only detect frequencies that the scanner covers and nothing else. Not an issue in my opinion. I personally get tired of the cell hits I get on the Opto Scout when I am in the field. The CC is a blessing and can even in harsh environments knock out whole pager sub-bands if need be. It is very flexible in this regard.

>How long did the batteries hold up, and any recommendations on a cigarette lighter-to-scanner converter for this 3-volt wonder?

Battery test were excellent. And the best part, you can put alkaline bats in in a pinch. I got about a 10 hour average battery life with the rechargeable bats they included. Of course, your mileage will vary depending on audio volume setting and the amount of overall activity the scanner is monitoring.

>BTW - I appreciate your comments about the 246 on this list, and placing a copy of the scanner manual on the Grove site.

No problem. It was fun working in the background as a Uniden Beta Tester. It was even more fun seeing all the speculation and conjecture about the radio on the various newsgroups, all the while knowing what the real story was. I have written a detailed "first look" at the BC-246T that will appear in the December issue of MT. This scanner gets 4 1/4 stars in our final rating.

My only major complaints:

(1) no milair (you know I consider that an important issue) and
(2) no digital capability.

I am sure somewhere down the line that they (Uniden) will release a model that does both of these, but to be honest with all you right now, they have NOT indicated that will be the case in the near term.

2406. Grundy County Finally Gets E911

Yahoo group: chattradio
Date: 2004-11-20 01:11:59 UTC
From: glacierclipper
Topic: 2406 Message: 2406

Grundy 911 Now Online

By: November 17, 2004

According to Don Hutcheson, Chairman of the Grundy County 91 emergency Communications District, the Grundy County Enhanced 911 system is online as the primary emergency dispatch for all of Grundy County and the cities within our county.

Dial 911 if you require emergency services such as police, fire, rescue, or EMS. Officially referred to as Mountain Central E911 and located in Monteagle, the daily activities are overseen by Monteagle Police Chief Lee Parker. Calls to 911 are being answered around the clock at the center and dispatched to the appropriate departments. The non-emergency phone number is 931-924-2077.
The new system's equipment allows dispatchers to identify the address from which the phone call is being placed. This information will help assure emergency responders that they are at the correct location. The feature is very useful in the event that the caller is unable to communicate verbally with the dispatcher (for example, a very young child) as responders can be directed to the emergency with only the suspicion of an emergency.
Grundy County has installed several road signs based on data from the extensive mapping performed over the past two years. The signs agree with the address information available to the dispatchers. If residents or businesses wish to further identify their location, they can obtain their 911 address markers from their local fire departments.
Mountain Central E911 is working well and will continue to improve as various additional functions are brought online. Grundy citizens and our very important emergency responders will surely reap the benefits of this state of the art system.

2407. Chattanooga Trunking System Troubles

Yahoo group: chattradio
Date: 2004-11-24 17:03:41 UTC
From: mws6533
Topic: 2407 Message: 2407

Apparently the city's trunking system is experiencing some technical difficulties, as we like to say in the broadcasting business. From what I have been told, the dispatchers are able to transmit but mobile and portable radios are not working.

Operations are currently being conducted on VHF frequencies for agencies who still have those capabilities, other users have switched over to the various NPSPAC 800 MHz conventional repeaters:

866.0125
866.5125
867.0125
867.5125
868.0125

2413. New Fannin Co GA System and more

Yahoo group: chattradio
Date: 2004-12-21 18:05:02 UTC
From: Larry Van Horn
Topic: 2413 Message: 2413

Fannin County has put up a new PS system in the 800 MHz band. The new system is a school bus net on 854.5875

Here are the particulars:
GA WPFW794 County School Bus net repeater output - Blue Ridge (DCS 032)

The Cherokee Co NC SO TAC repeater is operational but I haven't heard much on it to date.

And from the FCC files: The State of North Carolina has submitted a license request to the FCC to put in on Johanna Bald a repeater system for the EMS to hospital frequencies as follows:

462.950 462.975 463.000 463.025 463.050 463.075 463.100 463.125 463.150 463.175

These will be 200 watt repeaters with an ERP of 370 watts. This will be some fun listening for those of us who have to monitor hospital-ambulance comms on simplex channels. I will watch the site for approval and let you kall now when the system becomes operational.

Have fun out there and good hunting.

Depending on the dispatcher, the reason for the calls are mentioned. Otherwise, the 400's are still in use, along with the "D" codes.

As been brought to my attention, many agencies are a few to 5 years off from switching over to digital. And what digital means is, you won't be able to listen to voice transmissions with your traditional analog scanners. The voice traffic will require a digital capable scanner to be heard. There are some digital VHF traffic in use with TWRA (Game Warden), but no public safety agency have upgraded to digital, yet. So for now, the analog scanners are still usable and remains the cheapest to purchase. But if you travel some and wish to take your scanner along, it wouldn't be a bad idea to get a digital scanner. Many of your surrounding cities have upgraded or in the process of upgrading to digital trunking systems. Nashville and Birmingham are 2 cities who've upgrade to digital. The Knoxville and Atlanta areas still have a way to go before there transitions are complete. Therefore analog will remain usable in these areas. But this upgrade is a nationwide epidemic. Eventually, a digital
scanner will be a must to purchase. Now, you asked, What's the best scanner for Chattanooga? Well many may tell you that it's wise to go ahead and get the digital scanners. And as much as I agree, it's the cost that you must prepare for. So for good features and a decent price, I recommend the Uniden 246T. It's the newest portable on the market. It has Alpha Tags, it uses akaline batteries and it's a trunker. Basically, this scanner has many of the bells and whistles of your Uniden digital scanners. With exceptional of digital and price, of course. But it's seems to receive great reviews from many hobbyist and it's a great choice for those who wish to hold on to analog trunking system.
Good luck on your quest and may you and your family have a Merry Christmas.
Sincerely,
Firefighter Wadie E. Suttles III

I agree that this is a great scanner for any area with analog trunking or
conventional systems only. Even if public safety had gone digital, this
scanner would still be great for everything else that there is to listen
to around here. The dynamic memory allocation means that you can
customize the scanner unlike any other before it, and the "close call"
feature works wonderfully. In traveling around since I have had mine, I
have captured the transmissions from several nearby handheld radios, as
well as ham repeaters, the EPB (their tower is on a hill about 2 miles
from my house), a few water company data links, and a few frequencies I
have yet to look up. Maybe the next Uniden digital scanner will include
these features as well. If so that will be the one I seriously consider
for whenever public safety goes digital.

23856 is a new one, County Info. Same use as Chattanooga's Info channel on 16496.

Not sure if Red Bank and Collegedale, who are dispatched by the county, will use it as well, but that shouldn't be too difficult to determine.

For the 400 codes, my list is available at http://www.scanchattanooga.com/pdf/chattanoogatnpd.pdf . I think 486 is narcotics, not sure what 497 is.

The communications is between IMAP (Motorist Assistance Patrol)
units, which operate through the N.C. Dept of Transportation.

Usually, these guys are handle a little stress very well. If they're
not helping a motorist broken down on the side of the interstate,
their dealing with accidents, injuries and traffic backups.

I guess the situation got the better of the first IMAP unit on-scene.

At accident scenes, their primary concerns are to clear blocked lanes
(if possible), and establish traffic flow around the scene.

The IMAP units operate along the interstates - in urban and
construction zone areas. The units on the recording are with DOT
district 11 (11xx unit I-Ds), which covers an area of I-77 from the
Va state line down to I-40 (almost).

About the only thing left using RTTY are hams Fred. None of the marine band comms uses RTTY anymore. It has moved either to satellite or digital HF uses SITOR-A/B and now some PACTOR modes for HF email. I strongly suggest you invest a dime or two (actually $19.95) and get the MT 2002 Anthology on CD-ROM. It has my series or articles called Who's Who in the radio spectrum. Over many parts I show you Who is in the radio spectrum, where they are at, propagation techniques need to monitor them, modes they use and what equipment you need to hear them. It is in 9 parts and was published throughout the 2002 calendar year.

The shortwave spectrum landscape in the world of digital has changed and looks nothing like it did just five years ago. RTTY and CW is all but gone, and the most popular digital mode we use today is ALE (automatic link establishment). The list of HF modes would stagger you and the days of RTTY and the Commodore 64 have long since pasted. Unless you have one of the exotic (and expensive) software based decoders, you won't do much. Most all the work today is done through software and the computer soundcard. Stand alone decoders of yesteryear (MFJ, Universal, Info Tech, etc), don't bother, you won't be happy.

Sorry the news isn't much better. Actually I love ute listening in today's environment more than 5-10 years ago. We know so much more now about hidden radio networks than ever before. You can find out more about these in my monthly column in the FREE WUN newsletter on the World Utility News website (www.wunclub.com)

My current column is at
http://www.wunclub.com/newsletter/v10/n12/mla.html

The WUN site will give you more to do than you will ever have time to do. It is most excellent and for those who don't like to pay anything to particpate in this hobby, it is free. ;-)))

You have two excellent references for the active ute monitor. We carry both and they are both on CD-ROM (the days of radio printed books are numbered sorry).

Check out http://www.grove-ent.com/SWMWBOOKS.html and look for the Grove Shortwave Directory or the WUN Frequency Guide. Both have excellent info on monitoring HF utilitiy comms.

Now Fred aren't you glad you asked. ;-))))

73 guys and watch out for the bad bad weather moving in this afternoon. I have two scanners running in the office this morning. The BC-246T is monitoring PS comms (in 4 states) and the BC-796 is monitoring 1000 channels of civilian and military aero comms.

Subject: [chattradio] RTTY Software

Does anyone know about a simple software program
for RTTY. I know there is some out there, but it's
been many years since I tried it. Probably the 70's
I had a Commodore 64 at the time and enjoyed the Maritime stuff.
If Larry over at Monitering Times knows of any, I would appreciate

a response....I have an icom-R71A receiver. Thanks, Fred

From: Python
Topic: 2437 Message: 2442

Ah I wasn't sure what the purpose was. When I used it briefly, they used it to transfer programs and files among computers (commodore 64's). I guess it was back in the day's of BBS's where you called ever computer you communicated with directly. Thus alot of phoen bills, this was way to communicate over a distance w/o paying phone charges. If I remember correctly, the program we used was Buddy Talk.

Subject: [chattradio] RE: RTTY Software

Python, RTTY Software has nothing to do with
worldwide web. It is software that allows us to
connect a Short wave receiver to computer and have
teletype and other things monitored on computer.
It is mostly weather and other communications. It is just
noise without the software......Fred

WOW!
Listening this morning to unbelievable reports.
In Conneticut and Massachutes,
Temperature falling into the teens.
Up to 30 inches of snow in Boston...maybe reach all time record.
Winds up to 80 mph in some areas!
6 feet snow drifts!
Sounds like a Hurricane Snow Storm!

2451. New talkgroup ID'd on Tri-County system

Yahoo group: chattradio
Date: 2005-01-30 22:30:49 UTC
From: Jim Knight
Topic: 2451 Message: 2451

Talkgroup 000-1 was active the other day. From the conversation, it was obviously the radio technicians who maintain the system. They discussed replacement of an amplifier on one of their channels. What made it really obvious that they were associated with Tri-County Communications was that they joked about BFI keeping the system tied up "shooting their mouths off all the time". Anyone who listens to the system knows you won't hear much else unless you lock BFI out!

Hey Jim.
If you get a chance, could you post Lindsay Blanton's website (Radio Reference) address on yahoo Chattradio forums?
It has the most comprehensive information about local and nationwide trunked and conventional two way systems.
It also contains far more talk group id's. This will help folks find stuff otherwise not published.
The site is: radioreference.com. You'll find forums and the "RR Data Base" that has all frequencies and groups.

Thanks,
John

Glad to hear from an old client who shares the hobby! I haven't figured out who you are. Send me a private email and let me know.

If you're looking for general information on how the several types of trunking systems work, here's the best source I know of:

http://www.radioreference.com/modules.php?name=Content&pa=list_pages_categories&cid=1

If you're needing some help programming the Chattanooga/Hamilton County TRS into your Pro95, maybe I can help. I use a Pro92. A while back, a friend asked for some help programming a Pro95. Using the data conversion program, we were able to upload my SPG file data to the Pro95, and it worked just fine.

Topic: 2458 Message: 2461

Jeff,

I live in Athens, and have a p95 file for everything from Chattanooga up to Knoxville. P95 files are used in Win95. This program lets you program your scanner on a computer instead of having to type it all in on the keyboard. You can download it here: http://www.starrsoft.com/freeware/Win95/default.asp BTW it is free!

If you'd like anything I have let me know and I will email it to you.

You will need a cable that you can get at radio shack: http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=&product%5Fid=20%2D289&hp=search

You can get a similar one at different website but radio shack is the easiest IMO. Make sure you get the 20-289 cable. If they try to sell you another one don't get it, it will not work.

Here is a manual for the Pro95 that is easier to understand: http://marksscanners.home.comcast.net/93_95/95-1.html

And two frequency sites that I can't live without are: http://www.scanchattanooga.com/ Great local site. Ran by Matthew on this board.

A lot of times people forget to change the type pulldown at the top of the page, beside the name for the bank, to MOT or EDACS depending on the type of system you are monitoring. You also have to have the correct fleetmap programed for a type I. If not you might not be able to enter the correct ID. What system are yuo programing in? If I have it I can send it to you if you would like.

2477. Purchase locally in Chattanooga

Yahoo group: chattradio
Date: 2005-04-02 22:06:07 UTC
From: Larry
Topic: 2477 Message: 2477

Hello All,

Hope everyone is having a great day. I am wondering I have a bc235 and I am looking for a holster to carry it in locally prefer the one with a metal clip to put on belt loop but can be the other kinds.

does any know if there is a place in Chattanooga where I can purchase one? If so where please email me at Larry_stowell@....

My one roommate thinks there is a unform place here in chattanooga to get things like that but he is not sure where such as a place that sells stuff for scanners, and for fire or police officers.

If so please let us know I have found them on the internet just wondering if I can beat the price locally and avoid shipping.

thanks Larry

2478. Signal Mountain to contract with Hamilton County for 9-1-1 services

Yahoo group: chattradio
Date: 2005-04-12 06:15:12 UTC
From: Matthew Sadler
Topic: 2478 Message: 2478

From the Chattanoogan.Com:

http://www.chattanoogan.com/articles/article_65285.asp

Signal Mountain has approved resolutions to contract with Hamilton County for 9-1-1 and dispatch services for their fire and police departments on a trial basis from April 15 to June 30. The Town declined to go ahead and approve resolutions to do the same until June 30 of 2006, saying that decision would be made after the trial period and after budget work had been completed.

The Town will pay $5189.50 for the service for the contract period.

This leaves only Lookout Mountain and Soddy Daisy not operating out of the 9-1-1 Center on Amnicola Highway. Chattanooga and East Ridge are the only municipalities who have their own dispatchers that are in the 9-1-1 Center; Collegedale and Red Bank are both dispatched by the County, Lakesite and Walden do not have police forces and contract with the County for law enforcement, and Ridgeside contracts with East Ridge for law enforcement services.

No word on how this could affect their radio communications; only thing I can think of would be that they may not be up on the conventional repeater right away, but you never know.

2482. Online Scanner Test

Yahoo group: chattradio
Date: 2005-04-19 21:10:13 UTC
From: Richey
Topic: 2478 Message: 2482

I have a project I am working on for work. I have a customer who is out where there where I can't get him DSL or Wireless. He wants to run a small audio stream through one of our streaming media servers. So I told him I would see if I could get it to work with a netgear 56k router, P166, and a Copy of Windows Media Encoder. If you are interested you can listen at mms://media.americainter.net/scanner (Just cut and paste that in IE). I will leave the stream up 24/7 during my test at which time when the test is over I will move it back to our internet feed at the office.

I am running this on an a Bearcat BC350A with the standard telescoping antenna sitting on my desk in my office that is in Fountain Plaza.

Frequencies are:

42.4200 THP
47.3600 TDOT Help Trucks
146.6100 (W4AM) Tag Skywarn Repeater
146.7900 (W4AM) Some times I lock this one out if someone gets really long winded.
154.6000 "Blue Dot" Frequency. If you hear something like Check 1,2,3 that's me just testing audio through the encoder. Other wise it's some random user in this area.
464.4750 Hamilton Place Security

So this brings up the question, is anyone who might have a scanner and an old pc that is collecting dust interested in setting up a broadcast from their scanner? Since this is a voice type stream it takes little bandwidth and not much CPU to stream something like this.

I think it is Walker County or Catoosa County they set off a long series of tones and then it says testing was completed. It appears to be a normal and routine daily thing around 6 pm on 154.175

I work for Catoosa 911 and we test our Fire Communications system at 1800 on 154.430 MHz. Walker County was testing their Fire Pagers at 1900 on 154.175 MHz. For a while Walker was using alphanumeric pagers exclusively for the Fire Dept but they have gone to using voice pagers for all 2nd pages and for all 1st pages after a set time at night. This was due, I have been told, because of reliability issues with the alphanumeric units. Walker also test LaFayette Fire Dept. nightly at 1800 on 154.980 MHz and Rossville Fire Dept. at 1800 on 154.175 MHz. Hope this helps some.

2488. U.S. Court of Appeals Decision

Yahoo group: chattradio
Date: 2005-05-07 19:10:45 UTC
From: Richard L. Elliston
Topic: 2488 Message: 2488

On Friday the U.S. Court of Appeals for the District of Columbia released an opinion which apparently struck down an FCC rule which would have required the installation of circuitry in new computers which would have made it more difficult to copy digital television programs. There is an article about the opinion in today's New York Times online edition in the Technology Section. The Circuit's webpage was last updated around noon on Friday, and the text of the opinion is not yet included. According to the news article, the opinion included the following language:

"In this case, all relevant materials concerning the F.C.C.'s jurisdiction - including the words of the Communications Act of 1934, its legislative history, subsequent legislation, relevant case law, and commission practice - confirm that the F.C.C. has no authority to regulate consumer electronic devices that can be used for receipt of wire or radio communication when those devices are not engaged in the process of radio or wire transmission," Judge Edwards wrote.

Wow!!! What are the implications for scanner manufacturers and for those who enjoy the scanning hobby? Guess we better wait for the full opinion before reaching any conclusions.

Hi Jewels,

The best websites to provide you with frequency updates are as follows:
http://www.radioreference.com/modules.php?name=RR&ctid=2460
www.scanchattanooga.com

Both will provide you with any questions you wish to answer. I would love to answer your question, but because of an issue on misinformation I had with a fellow member of our local group, I now advise all new members to obtain as much information through the listed websites above. To add, you'll have an additional resource to verify what I or someone else could tell you.
Thanks Jewels and hapy scanning.
Sincerely,

Jewels <ductrat@...> wrote:

Not an expert by any means on this but I think the Nextel direct connect calls use some of the 800 frequencies in the area. One problem is that you probably would have to search and just happen to hit on one when it is in use to find them. The other problem is unless they recently changed, they are treated the same as cell phone conversations and even though you might find them, it is illegal to listen to then without a court order.

Jim

I'm not an expert either, but due to the type of communcation and infrastructure that Nextel is using, I do not think a scanner could decode it. If you are familar with IDEN technology, you see that this infrastructure is extremely difficult to penetrate through modern scanner technology. However not impossible to decode, with modern scanners, it's isn't capable.

2514. Re: Nextel

Yahoo group: chattradio
Date: 2005-07-18 12:18:06 UTC
From: j_multer
Topic: 2511 Message: 2514

The iDEN format that Nextel uses relies on both digitized audio, and time division multiplexing (TDM) ... meaning that the audio from several users is transmitted sequencially as small packets on the same carrier.

iDEN provides for multiplexing up to six sources, but I believe Nextel limits voice channels to three ... to maintain audio quality.

Even so, to receive and comprehend a conversation on Nextel, you would have to have a means to decode the digital signal (which is proprietary), and a means of tuning the TDM carrier.

Nextel is used alot by public safety in my area (near Charlotte, N.C.), also, so I wish there was an easier way to listen to iDEN.

Topic: 2511 Message: 2515

Hey Jeff and all, Sorry but Netxel now has the same protection from monitoring as an cellphone company signal. They applied for and received from the FCC a change in their service status. They are now considered as common carriers (like all the other cell companies) and therefore covered under the ECPA and other fed laws. This was done after the anti-scanner bills that were introduced several years ago failed to make it through Congress, thanks to hundreds of scanner folks who fought city hall and wrote their reps when the call to arms went out. As I said many years ago, when Congress told the FCC to auction the radio spectrum and the ECPA passed, the right to monitor signals went down a slippery slope. It was only through a massive letter campaign that we have today the digital scanner in the marketplace. You folks don't know how close you came to not having that little toy.
So in addition to the proprietary system that they use and their protection under fed law, you will never have a scanner in the marketplace that will let you monitor any Nextel comms. Sorry Larry Van Horn, N5FPW Assistant Editor/Columnist Monitoring Times magazine

2516. BC296D and BC785D/BCi25D

Yahoo group: chattradio
Date: 2005-07-24 16:03:36 UTC
From: firemedic2150
Topic: 2516 Message: 2516

Greetings all after careful review I have decided to part with two scanners and radios to allow for expansion, so I am offering for sale to my neighbors the following.

1) A very nice BC296D with all of the original accessories and I am including a RS 800Mhz tuned antenna, this scanner is by far one of the best receivers I have ever owned. I would like to have $450.00 for the scanner but I am open to reasonable offers.

2) A great mobile the BC785D w/the BCi25D digital card installed, I use this scanner daily in my car and have never had a moment's problem from it, it does have some scratches to the top of the metal case but they are just cosmetic. The asking price for the scanner is $400.00 but it is open to reasonable offers as well.

3) A good pair of portable HT's, both are Vertex VX-160's one is a VX-160V that covers 148.000 to 174.000 MHz. the other is a VX-160U that covers 450.000 to 485.000 MHz. Both radios have great batteries and come with a drop in rapid charger and a drop in overnight charger. They offer 16 channels w/scan and two tone decode. Both radios are 12.5 KHz. spacing programmable also. It is my wish that they go together in a sale so I have priced them together at $300.00.

2517. disaray in Congress over DTV bill

Yahoo group: chattradio
Date: 2005-07-25 23:56:12 UTC
From: David
Topic: 2517 Message: 2517

Thought some might like this article I read concerning digital tv and how congress is handling it.

Dueling DTV Bills
Lawmakers vie to end analog TV

By Deborah D. McAdams
From the July 6, 2005 edition of TV Technology

Ending analog television is becoming the Holy Grail of secondary issues on Capital Hill. In between judicial appointments, John Bolton, the Patriot Act and the "memo," lawmakers jockeyed to introduce DTV bills.

In the House, draft legislation for a December 31, 2008 date continued to circulate while Sen. John McClain (R-Ariz) recycled his SAVE LIVES Act, which calls for the analog broadcast spectrum to be available as of January 1, 2009. Meanwhile, Senate Commerce Committee Chairman Ted Stevens (R-Alaska) was expected to unveil a DTV bill of his own.

McCain, who has long vilified the broadcast industry, reintroduced SAVE LIVES at a press conference where he linked broadcasters to 9/11 casualties.
Because broadcasters failed to turn over their transition spectrum according to schedule, first responders had inadequate communication links on that day, he said.

"Firefighters inside the towers were unable to get transmissions to evacuate the building," McCain said.

In his statement on the Senate floor, he was far more conciliatory.

"I continue to believe that broadcast television is a powerful communications tool and important information source for citizens," he said. "I know that on 9/11, I learned about the attack on the Twin Towers and the Pentagon like most Americans□by watching television. Therefore, this bill seeks to not only protect citizens' safety, but also the distribution of broadcast television.

SAVE LIVES ("Spectrum Availability for Emergency-Response and Law-Enforcement to Improve Vital Emergency Services") was introduced in the 108th Congress where it was quickly derailed.

The new version, S.1237, includes DTV provisions covering public education, warning labels and digital-to-analog converter subsidies.

The House draft, which had yet to achieve bill status at press time, made no mention of providing a subsidy for converters, an issue that divided members of the House Commerce Committee.

"It's unacceptable that we have no plan to remedy consumers," said Ed Markey, (D-Mass.) at a committee hearing on the draft.

Joe Barton, (R-Tex.), committee chairman, said he would support a limited subsidy, while Cliff Stearns, (R-Fla.), said he was "not convinced a subsidy was necessary."

Budgeting For Boxes

McCain's bill includes a converter subsidy of around $463 million□ the amount necessary to cover the 9.3 million households that do not exceed twice the poverty level, according to the Government Accounting Office.

The original version of the bill set aside $1 billion for converter-box subsidies from spectrum auction proceeds□the subject of wildly fluctuating projections.

Aside from the uncertainty of how much money spectrum auctions will raise, no one knows for sure how many people rely exclusively on over-the-air television, or how many of them will have digital TV receivers by 2009.

At a hearing on the house draft bill, Consumer Electronics Association chief Gary Shapiro testified that "including set-top boxes, by 2009 we will have sold 97 million DTV tuners, and we estimate that over-the-air tuners will be found in 86% of American homes.

Two weeks after the hearing, the FCC goosed the dissemination of digital broadcast (ATSC) tuners by making manufacturers put them in TVs sooner than previously required.

All large and mid-sized TVs shipped for sale in the US will have to include ATSC circuitry by March 1, 2006.

(The tuner requirement does not apply to products that are "monitor only;" but to TVs that otherwise have analog reception capability.)

The FCC's original tuner mandate required that half of 25- to 35-inch sets include tuners by July 1; and that 100% have them by July 1, 2006.

The CEA asked to have the halfway point dropped in exchange for moving up the 100% deadline by four months. Instead, the FCC Kept the 50% deadline and moved the 100% deadline date up four months.

The commission also opened a Further Notice of Proposed Rulemaking to move the final deadline for smaller sets□13 inches and larger□up by six months, from July 1, 2007, to December 31, 2006. The notice

also asked for comments about whether a tuner requirement should be extended to sets with screens smaller than 13 inches.

Consequential Costs

The CEA wanted the halfway point on min-sized sets ditched because it said the ATSC price premium drove away retailers, who are not subject to the FCC rule. The cost of putting ATSC circuitry into a TV set is around $80-$100, which translates into about $300 retail, according to an analysis of current market prices.

A $300 price differential for sets that look identical has led to a strong market for analog TVs, which outsell the digital/direct-view LCD/plasma category by about 4:1.

As of July 1, 2004, half of sets 36 inches and larger had to include ATSC reception. Eight months later, ATSC-capable sets in that size category comprised less than one-third of what reached showroom floors, according to a survey of ads in major metropolitan newspapers tracked by New York-based TV expert Mark Schubin.

From March 28 through June 3, of 1,237 ads for TVs 36 inch and larger, 387□31%--included ATSC tuners.

Those larger sets account for about 18% of sales to dealers, while the mid-sized category accounts for about 40%. Thus, CEA members fear being left with warehouses full of mid-sized ATSC sets.

At least on consumer electronics manufacturer embraced the FCC action. TTE, the TV□making joint venture of Thomson and Chinese appliance giant TCL Corp., is in the process of rolling out a line of low-priced standard-def DTVs (under $400). Greg Bosler, executive vice president of the TTE North America Profit Center, said TTE was "eager" to complete the DTV transition and sell more of the cheaper sets. A $300 27□inch model, demonstrated on Capitol Hill in May, is due to hit the market later this year.

From: Larry Van Horn
Topic: 2519 Message: 2520

Your question is best answered by asking a you question, "what are you going to monitor and what kind of scanner do you have?"

As an overview RG-6 is the most cost effective and low loss cable in the marketplace. Don't let the 75 ohm impedance scare you, NO radio exhibits 50 ohms impedance through its entire tuning range to the antenna. Those who pay the big bucks and buy hardlinecoasx (LMR-400) etc to monitor their local PS bands which are already full qiueting already, have more money than good sense. Heck they need to come over here and share that money with me. ;-))

So before you ask about what coax, give us some additional info. What do you want to monitor, what equipment are you using now, how do you receive what you want to mon\itor now, etc. That will be a benefit in getting the right answer to your question,

73 and good hunting,

Larry Van Horn, N5FPW

From: Wadie E. Suttles III
Topic: 2519 Message: 2526

I agree with Larry when it comes to the type of coax to use. And since you're trying to pull in Chattanooga trunking signals, you should try RG-6 and get an outside antenna at least, 8 to 10 feet above your roof line. Make it sure it's grounded, to remove interference and unneccessary static. The best antenna I've used to date in bringing distant signals is the Scantenna Dipole. Out of all the setups I've used (Radio Shacks, Discone, The Scanner Beam 2 and my present use of the NILJon), the Scantenna Dipole really provided me with full quieting on the Chatta-Hamilton Co TRS. And from my location in the Hwy 58 area of Chattanooga, I was receiving signals as far away as Rome-Floyd County and Cherokee County Georgia. And I'm not on a hill. So each is own on what antenna to use, but I do know from experience and of fact that RG-6 will work effectively.
My $.02

the marketplace. Don't let the 75 ohm impedance scare you, NO radio
exhibits 50 ohms impedance through its entire tuning range to the
antenna. Those who pay the big bucks and buy hardlinecoasx (LMR-400)
etc to monitor their local PS bands which are already full qiueting
already, have more money than good sense. Heck they need to come over
here and share that money with me. ;-))
>
> So before you ask about what coax, give us some additional info.
What do you want to monitor, what equipment are you using now, how do
you receive what you want to mon\itor now, etc. That will be a benefit
in getting the right answer to your question,

2531. Trunk in BCT-8

Yahoo group: chattradio
Date: 2005-08-06 01:05:30 UTC
From: akcoggin21
Topic: 2531 Message: 2531

I own a uniden BCT-8 and was wondering if anybody knew how to program the Hamilton county trunk system into this scanner and if its even possible. I have spend a lot of time trying to figure it out but cannot seem to get it to work properly. If anybody knows if you could email me the process at coggin625@... or just post a reply on here.

Thanks,
Andrew Coggin

2532. Re: [chattradio] Trunk in BCT-8

Yahoo group: chattradio
Date: 2005-08-06 11:20:36 UTC
From: Larry Van Horn
Topic: 2531 Message: 2532

You should be able to program that Chatt TRS into a BCT-8. However, as they move from analog to digitalthere will be less to hear on your BCT-8 and if you want to continue to monitor the system you will HAVE to move to a digital scanner. Sorry.

Got to page 30 of the manual. Perform step 1

Perform operations 1, 2, and 3. On step 3 select E2-800.

Move to Page 31 and perform operation one then start putting in your freqs. You can get those at http://www.scanchattanooga.com/local-tn/hamiltoncounty.php

Actually the BCT-8 programming of a trunk system is very much like most of the early Uniden trunk scanners. They are much easier than the newer dynamic memory scanners we have now. Hopefully you bought your BCT-8 at Grove. ;-)) And if you did you can call the 800 line and get some additional help if you need it. If you didn't, you might be able to beat Grove's price but you can't beat Grove's tech support when you don't know how to work ye ole new radio toy.

73 all,

Chief

2533. Uniden BCD396T

Yahoo group: chattradio
Date: 2005-08-10 18:14:01 UTC
From: chasenlayne
Topic: 2533 Message: 2533

Although I am not scanner savy, lol. I just found this site and wanted to ask if the Uniden BCD396T would be useful in the chattanooga area?? or would another scanner like the BC246T be fine?? I had an BC245XLT but it doesn't work anymore and just looking for a quality scanner. I love in North Ga and they still operation on the 150mhz frequencies but listned to a lot of the Trunked frequencies in Chatt.

thanks

2534. Re: [chattradio] Uniden BCD396T

Yahoo group: chattradio

From: Larry Van Horn
Topic: 2533 Message: 2534

BC-246 cannot handle digital trunking which will evidently be the on the Chatt TRS. As one of the alpha and beta testers for the 246 and the 396 I would strongly urge you to select the 396. There is NOTHING like it in the scanner marketplace today. The RS Pro series are nice but cannot hold a candle to the 396. My review of the 246 and 396 are both online at the Monitoring Times website. You can visit the MT Reference Library and it is there. All free of course. During the pre production testing, I used both extensively on the Chatt system among many and both did a fine job, but it is the value added features (i.e. digital, etc) on the 396 that are the deal maker for me.

If I had one radio only to choose from in the marketplace today it would be the 396 hands down.

Have a great one and 73 all,

2546. Katrina Refugee Operations

Yahoo group: chattradio
Date: 2005-09-04 17:43:39 UTC
From: Matthew Sadler
Topic: 2546 Message: 2546

As Katrina refugees are arriving in Chattanooga, the disaster talkgroups on the Chattanooga trunked system are becoming active with ambulances from both Hamilton County EMS and Memorial Hospital EMS, transporting those who need medical attention to area hospitals. Other talkgroups are also active in the efforts to get these folks to where they need to go.

For the talkgroups, see:
http://www.scanchattanooga.com/trunking/chattanooga.php

For more details on how Chattanooga is helping these people, see:
http://www.chattanoogan.com/articles/article_71913.asp

Special Advisory - This Joint Task Force JTF advisory was posted to the MilCom mailing list on 04 Sept:
A0458/05 - SPECIAL ADVISORY.

FLIGHT RESTRICTIONS NEAR U.S. NAVY SHIPS OPERATING IN THE NORTH CENTRAL GULF OF MEXICO. ALL CIVIL, FEDERAL AND MILITARY ROTARY WING AIRCRAFT OPERATING IN THE VICINITY OF U.S. NAVY SHIPS WHILE CONDUCTING KATRINA DISASTER RELIEF MISSIONS SHALL CONTACT THE SHIP ON 277.8 UHF/123.45 VHF FREQS WITH CALLSIGN, POSITION, ALTITUDE, TRANSPONDER CODE, AND INTENTIONS. USE THE CALLSIGN "US NAVY SHIP" WHEN COMMUNICATING WITH THE SHIP. DO NOT APPROACH WITHIN 5 NM UNTIL CLEARED BY THE AIR CONTROLLER. IF UNABLE TO MAKE CONTACT ON THE COMMON FREQUENCY, ATTEMPT CONTACT ON GUARD. IF CONTACT IS NOT ESTABLISHED, DO NOT APPROACH CLOSER THAN 5NM UNLESS AN IN-FLIGHT EMERGENCY EXISTS AND AN IMMEDIATE LANDING IS REQUIRED. AIRCRAFT DESIRING TO TRANSIT CONTROL ZONE AIRSPACE WITHIN 5NM SHALL CLIMB TO 1000 FEET AGL AND MAINTAIN CONTACT WITH AIR CONTROLLERS UNTIL OUTSIDE 5 NM. ROTARY WING AIRCRAFT DESIRING TO LAND IN SUPPORT OF DISASTER RELIEF OPERATIONS WILL BE PROVIDED A DISCRETE FREQUENCY TO CONDUCT COORDINATION AND AIRCRAFT CONTROL. ONCE CLEARED APPROACH THE SHIP AT 300 FEET AGL AND LESS THAN 80 KNOTS WITHIN 5 NM. ALL AIRCRAFT ARE ADVISED OF HIGH DENSITY ROTARY WING OPERATIONS BELOW 500 FEET AGL IN VICINITY OF ALL U.S. NAVY SHIPS. WIE UNTIL UFN

A0444/05 (FDC 5/7903) - SPECIAL ADVISORY TITLE 14 CODE OF FEDERAL REGULATIONS (14 CFR) PART 121 AND PART 135 OPERATIONS SPECIFICATIONS

PARAGRAPH A527 SPECIAL AUTHORIZATION FOR OPERATIONS INTO AIRPORTS AFFECTED BY HURRICANE KATRINA. THE CERTIFICATE HOLDER IS AUTHORIZED TO CONDUCT FLIGHT OPERATIONS WITHIN THE AIRSPACE AND TO AIRPORTS WITHIN THE TEMPORARY FLIGHT RESTRICTIONS AREAS CREATED AS A RESULT OF HURRICANE KATRINA SUBJECT TO THE FOLLOWING CONDITIONS AND LIMITATIONS. A. PERMISSION TO ENTER THE TFR AND LAND AT AIRPORTS WITHIN THE TFR MUST BE OBTAINED FROM THE APPROPRIATE AGENCIES IN CHARGE. B. TAKE OFF AND LANDING OPERATIONS ARE LIMITED TO VISUAL FLIGHT RULES UNLESS THE ADEQUATE NAVIGATIONAL AIDS AND LIGHTING ARE AVAILABLE. C. DUE TO LIMITED SUPPLY OF FUEL, THE CERTIFICATE HOLDER MUST INSURE ANY FUEL REQUIRED AT THE DESTINATION IS NOT CONTAMINATED, OTHERWISE, ADEQUATE FUEL TO COMPETE THE MISSION MUST BE TINKERED. D. UNDER THE PILOTS EMERGENCY AUTHORITY, THE PILOT MAY DEVIATE FROM THE OPERATIONAL REQUIREMENTS OF PART 121 AND PART 135 IF, IN THE OPINION OF THE PILOT IN COMMAND, THE OPERATION CAN CONTINUE IN A SAFE MANNER. WIE UNTIL UFN

A0441/05 (FDC 5/7895) - SPECIAL NOTICE JOINT TASK FORCE (JTF) KATRINA AIRSPACE CONTROL PLAN (ACP) PROCEDURES ARE IN EFFECT. ASSESSMENT, SEARCH, RESCUE, RECOVERY AND RECONSTITUTION OPERATIONS ARE IN EFFECT IN THE FEMA-DELCARED DISASTER AREA ALONG THE GULF COAST FROM BATON ROUGE, LA EAST TO MOBILE, AL. KATRINA JOINT OPERATIONS AREA (JOA): 3100N 09100W, 3100N 08730W, 2830N 08730W, 2830N 09100W SURFACE UP TO BUT NOT INCLUDING 5000 MSL. DETAILED PROCEDURES FOR OPERATING IN THIS AREA CAN BE FOUND AT WWW.FAA.GOV. PILOTS NOT PARTICIPATING IN FEMA OPERATIONS ARE ADVISED TO AVOID THE AIRSPACE ABOVE DUE TO THE HIGH VOLUME OF BOTH ROTARY AND FIXED WING AIRCRAFT UFN.

VHF/UHF Operations
You can only hear these in the local area -- to monitor, see the feed above
(http://www.radioreference.com/wiki/index.php/Hurricane_Katrina#David_Hitchner.27s_Feed).

123.000 and 123.025 AM is used for helo intercoordination in the New Orleans Metro area.
345.000 is the USCG Primary Air to Air / Air to Ground Frequency.
126.875 is an additional TFR Coordination Frequency
Marine Channel 16 (156.8) and 22 (157.100) are used by the USCG for operations.
238.650, 289.650, 138.450, 138.475, 138.525, and 142.250 have been passed as New Orleans Scene Communications Frequencies.

2549. Catoosa County Trunking System

Yahoo group: chattradio
Date: 2005-09-08 14:46:35 UTC
From: Fred White
Topic: 2549 Message: 2549

On Sept.6th Catoosa Sheriff Phil Summers (on a call in talk show) stated they have a low bid from H.F.Johnson for radios for the new 800 mhz. system. They are now awaiting approval from FCC for frequencies etc. Soon after they will start construction on a tower in the South end of the County near Wood Station which is on Hwy. 151 (aka Alabama hwy) He earlier said they would be on the Ham.Cty system. But for some reason they will be on a separate system still using the Chatt. tower (Lookout Mtn.) for the N.end of the County. He couldn't give an approximate timeline for being online. He also said Walker County would soon follow, using the same system. It will be APCO 25 system. He is calling it a Digital setup. I think it will probably be analog to start.
By the way, has anyone heard why Chatt. has not switched to digital yet?.....Thanks for your time.....Fred White

2550. Talk Show

Yahoo group: chattradio
Date: 2005-09-08 16:06:18 UTC
From: Fred White
Topic: 2550 Message: 2550

I just received an E-Mail asking about Talk Show mentioned
in previous posting.
It is for N.Ga. area......(Sheriff Talk) is on local cable.
In Ft. Oglethorpe-Lafayette area it's UCTV 3 at 11 PM on Tues.nights.
In Ringgold area it's same time on Charter Cable (don't know the
channel
#)
Both Catoosa and Walker Sheriff's answer any questions callers may
have.
Fred

2551. A Scan Chattanooga / Chatt Radio meeting

Yahoo group: chattradio
Date: 2005-09-10 01:51:19 UTC
From: Mark McDougal
Topic: 2551 Message: 2551

Good Evening,
I am trying to plan a gathering for everyone interested in scanners and monitoring in the area. I think this would be a good time for all from the most experienced to the novice among us. We can discuss new equipment and old, technical and simple and anything and anyone you want to bring is welcome. I have tentatively set the date and time as Thursday evening 9-29-2005 at 1700 (5:00 PM), I open for suggestions on a good location. I would really like to meet everyone and maybe we can put a face to some of the names, and let some of the more experienced share with those that might be newer to this great hobby.
Mark McDougal

This is great Idea, I would love to see what others are using and exchange scanner info.
Has anyone had any luck with the live scanner feeds from Nawlens? I was able to hook up on one a few days ago but havent been able to since.

Is their some reson you wont reply to my email? I am a former client of yours and like to chatt about some local scanner info. I think I have ask you several questions with NO response. If it is somthing you want to stay out of just let me know. It will not be taken wrong just would like to have a reply. When I was having trouble with my Pro 95 and was able to use the converter and transfer your files to reload my scanner was a GREAT help. Thanks

Hi Mark,
That sounds like a great idea. I am having trouble figuring out trunk tracking and how to enter the info via a laptop. It would be nice to meet some of the people who post on here too.

Could someone please elaborate on what this system is? I can pick up the
control channel but have not detected any activity any time I have
listened. Didn't see anything about it in a brief look at
scanchattanooga.com.

A general comment - the more information that we share on this mailing
list, the better it is for everyone!

It will function as a fill-in site for the trunking system. My understanding is that only public safety talkgroups will be able to affiliate to the system, and that radios won't affiliate to this site unless they are unable to get a sufficient signal from the main system.

The in-building coverage at Hamilton Place and the surrounding areas aren't what 'they' would like for them to be, and doing this type of system is a much more affordable alternative to adding another full simulcast site.

I haven't added it to the ScanChattanooga site yet because it isn't really online, transmitting but not linked up so nothing is using it aside from testing.

2571. New TEMA Freqs Everywhere!!

Yahoo group: chattradio
Date: 2005-10-07 18:16:36 UTC
From: Larry Van Horn, N5FPW
Topic: 2571 Message: 2571

I have been prowling the FCC website and have noticed of the last few months a definite increase in the number of New VHF narrowband (7.5 MHz) repeater assignments around eastern Tennessee. It is amazing the shear numbers versus the number of people using these systems.

Now a a new set of licenses have been issued in the 800 MHz band. WQDK723
867.150/822.150
There are at least 6 repeaters sites located at:

Benton, Chilowee Mtn, Polk Co.
Chattanooga, Sawyers Cemetery Rd, Hamilton Co
Dayton, Evensville Mtn, Rhea Co.
Decatur, Nopone Mtn, Meig Co
Ducktown, Sheeptop Mtn, Polk Co
Etowah, Starr Mtn, McMinn Co.

So what gives with all the new assignments, especially this new 800 MHz assignment?

Is this a lot of DHS grant money that TEMA got to upgrade their comms? Why 800 MHz?

Inquiring minds would like to know if someone really has some insight into this new stuff. ;-)))

In addition to the store in the area, I have used their internet services. On their web site (I think it is Uniden.com, but not sure....it is easy to find) they have the full list of products and services. I have ordered several items from them and the delivery is very fast (usually within one week or less) and all goods arrived in perfect shape.
Just another option.

The website is www.uniden.com .

Keep in mind, though, that most of the scanners they have for sale through the website are refurbished units - not new.

The price discount might not be worth the potential problems (such as the previous owner happened to drop the scanner on several occasions).

The site is useful for obtaining software and firmware updates related to the scanners ... particularly the 246, 296 and 396 scanners ... along with accessories.

True, they do have re-built units, but many new also. I purchased my BC296D from them. Brand new, still sealed in box. Got it in about 4 days, and it was about $50 less than any I had seen elsewhere. Included charger, rechargable battery pack, belt clip, etc... With new and re-built items you do have to be careful. But a few minutes of reading may save you several dollars.

??? That's what the refurbished 296 scanners are selling for ($450) on Uniden ? And they all come in new boxes, with all the accessories, looking just like they came from the factory.

At this time, the only "new" scanner being sold via the Uniden site is the BC60 ... a basic 30-channel conventional handheld.

Does any know of a computer based program that will run the PRO 2051? I have tried the RS software and it is Dos Based program. I did run it on a older computer and it would not controll or accept anything from the 2051. I just thought there might be another know program that is compatable with the Pro 2051. I would appreciate any help anyone could offer. Thanks

Jeff and all,

>Not to do ANYTHING ILLEAGLE, is there anyway to hack the new uniden
and pro series to receive the celluar frequencies?

Yes, it is very illegal, punishable by a $250,000 fine and/or 5 years in federal prison, and it would also violate your scanner warranty (the least of your problems).

I can say with complete confidence there is no way to restore any cellular coverage in these units. Besides, you would only be listening to digital streams anyway. Even here in the mountains we poor folk use digital telephones.

And after 800 Mhz rebanding we will probably see more freq coverage lost thanks to Nextel. Bottom line we all had out chance to stop the madness in 1986 when Congress passed the first law and most did nothing. The genie is out of the bottle and there is nothing that will change that. Scanner made today by manufacturers have the ability now not to even have those freqs available in the unit.

Sorry for the downer, but there is a lot more interesting stuff to hear than someone private phone conversation.

I may have made a mistake in purchasing this scanner, but it was a bargin price. After reading through the manual I pretty much understal most of the features. But when it comes to installing Chatt trunking system It makes NO sense. I have wrecked my brainless head trying to program the trunked feqs. It took me a while with alot of help from chatt memebers in the assistace of instalation of theose in my PRO 95. This Pro 2051 is givving me headache. I cant find a computer control program that works with this model. Can anyone HELP a poor soul...

2590. airshow frequencies?

Yahoo group: chattradio
Date: 2005-10-17 12:53:00 UTC
From: cejay321
Topic: 2590 Message: 2590

We are heading up from Atlanta to see the Chatt. Air show..
Staying at the 'Park Inn' Friday nite (anyone know if thats
a decent place? its 44$ or so per nite)

Also does anyone have a list of airshow frequencies for
the airshow this coming oct 29th?

I have Blue Angels freqs.. just wanted basic
airboss (overall) freqs and a few airport
freqs and any other ones of interest
thanks

cj

I wanted to record today's practice because I was on my way to a meeting.
This was recorded on my laptop in the car with an Icom R3 on a rubber ducky.
I left the scanner and laptop running in the car while I was at my meeting.
Apparently the emergency began about 2 minutes after I got out of the car.
My meeting was in the area of Fox 61 so you have an idea about where the
recording was done from. Too bad I wasn't at the office which is rather
close to the airport. Did anyone else happen to record this?

Actually, you were in a pretty good spot. The emergency occurred
somewhere over Notre Dame High School (right near Memorial Hospital off
of Glenwood near 3rd Street). I know we had live coverage from there
where they had some debris recovered off of one of the school's practice
fields.

284.250AM is the most active. Since a lot of us are hams here why don't we agree on a repeater that we could "meet" on and share what we find during the show tomorrow. Thoes who are not hams will have a place to listen to us talk and find out what we know as a group.

For Harrison Bay State Park, check the Tennessee State Parks listing on
the Tennessee page.

Chester Frost is a Hamilton County park; so check the Hamilton County,
Tennessee page. They are on the countywide 800 trunked system.

For the Forest, check the US Forest Service page.

When I worked at Ruby Falls way back when, they were on 151.625
simplex... think they are now on FRS.

Lookout Mountain gov't is on the city 800 system
(http://www.scanchattanooga.com/trunking/chattanooga.php), National Park
Service uses that system some as well as 168.325 MHz.

2609. [Fwd: *** HIGH RISK SEVERE STORMS ***]

Yahoo group: chattradio
Date: 2005-11-15 06:41:10 UTC
From: Chris Palmgren
Topic: 2609 Message: 2609

You only see a high risk a few times out of the year... our risk appears to be late into the evening Tuesday.

Chris

...A SEVERE WEATHER OUTBREAK IS FORECAST TODAY AND TONIGHT FROM THE OH RIVER VALLEY SWWD INTO THE LOWER MS VALLEY. SEVERE THUNDERSTORMS CAPABLE OF STRONG TO VIOLENT TORNADOES AND WIDESPREAD DAMAGING WINDS WILL BE POSSIBLE ACROSS THESE AREAS...

...SYNOPSIS...

DYNAMIC MID/UPPER TROUGH CURRENTLY EVOLVING OVER THE CNTRL CONUS WILL TRANSLATE EWD INTO THE MS VALLEY THROUGH THE FORECAST PERIOD. AS THIS OCCURS...100-110 KT MID-LEVEL JET STREAK WILL DEVELOP THROUGH THE TROUGH BASE AND EJECT NEWD ACROSS MO/IL AND INTO THE CNTRL GREAT LAKES. IN THE LOW-LEVELS...SURFACE LOW ATTENDANT TO THIS UPPER SYSTEM WILL DEEPEN AS IT DEVELOPS NEWD FROM SWRN MO AT 15/12Z...TO NEAR STL AT 15/18Z AND INTO ERN LAKE SUPERIOR OR ONTARIO BY 16/12Z. ASSOCIATED WARM FRONT NOW SITUATED FROM CNTRL OK/AR NEWD TO ALONG THE OH RIVER WILL RAPIDLY LIFT NEWD AHEAD OF THIS LOW WHILE TRAILING COLD FRONT SURGES EWD THROUGH THE MID/LOWER MS...TN AND OH VALLEYS BY WEDNESDAY MORNING.

...GREAT LAKES INTO THE LOWER MS VALLEY...

15/00Z REGIONAL SOUNDINGS OVER THE LOWER MS VALLEY AND CURRENT SURFACE OBSERVATIONS INDICATE THE PRESENCE OF A MOIST LOW-LEVEL AIR MASS IN PLACE FROM THE NWRN/CNTRL GULF COAST NWD INTO THE WRN TN AND LOWER OH VALLEYS WITH 60 DEWPOINTS NOW TO THE OH RIVER. PERSISTENT AND STRONG SWLY LLJ OF 50-60 KTS FROM THE LOWER MS VALLEY INTO THE SRN GREAT LAKES WILL AID THE RAPID NEWD ADVECTION OF THIS MOISTURE OVER THE COURSE OF THE DAY WITH LOWER 60S DEWPOINTS FORECAST AS FAR N AS NRN IND BY 16/00Z. DESPITE MODEST MID-LEVEL LAPSE RATES OF AROUND MOIST ADIABATIC...DIABATIC HEATING COUPLED WITH THIS MOISTURE WILL CONTRIBUTE TO THE DEVELOPMENT OF WEAK TO MODERATE INSTABILITY ACROSS SYSTEM WARM SECTOR WITH AFTERNOON MLCAPES RANGING FROM AROUND 500 J/KG ACROSS THE NRN OH VALLEY TO 1500-2000 J/KG OVER THE LOWER MS VALLEY.

STRONG TO SEVERE TSTMS WILL BE ONGOING AT THE ONSET OF THE FORECAST PERIOD FROM ERN OK/SERN KS EWD ACROSS AR AND SRN MO. WHILE MANY OF THIS STORMS WILL BE SLIGHTLY ELEVATED N OF SURFACE WARM FRONT...A FEW STORMS WILL LIKELY BE ROOTED WITHIN A MOIST AND STRONGLY SHEARED BOUNDARY-LAYER. INDEED...POINT FORECAST SOUNDINGS ACROSS FAR ERN OK AND AR VALID 15/12-15Z INDICATE A QUITE FAVORABLE ENVIRONMENT FOR TORNADIC SUPERCELLS WITH EFFECTIVE BULK SHEARS OF 50-55 KTS AND 0-1

KM SRH OF 300-400 M2/S2.

THUS...EXPECT THAT THE GREATEST SEVERE WEATHER THREAT THROUGH THE
MORNING HOURS WILL EXIST FROM ERN OK ACROSS AR INTO SRN MO. FARTHER
TO THE N AND E...STORMS MAY TEND TO BE SLIGHTLY MORE ELEVATED WITH
THE PRIMARY THREATS BEING ISOLATED DAMAGING WINDS AND LARGE HAIL.

AN INCREASE IN STORM COVERAGE/SEVERITY IS ANTICIPATED BY LATE
MORNING/EARLY AFTERNOON FROM SRN IL SWWD INTO AR AS DYNAMIC FORCING
ASSOCIATED WITH UPPER TROUGH AND MID-LEVEL JET STREAK BEGIN TO
OVERSPREAD THE SURFACE SYSTEM WARM SECTOR. DEVELOPING MODERATE
INSTABILITY COINCIDENT WITH STRONG VERTICAL SHEAR INDICATE THE
LIKELIHOOD OF SUPERCELLS CAPABLE OF STRONG AND POTENTIALLY
LONG-TRACK TORNADOES. IN ADDITION TO THIS ENHANCED TORNADO
THREAT...LINE SEGMENTS WITH EMBEDDED BOWING AND LEWP STRUCTURES WILL
ALSO BE POSSIBLE ALONG COLD FRONT WITH A DISTINCT THREAT OF A SERIAL
TYPE DERECHO WIND EVENT ACROSS THE MODERATE AND HIGH RISK AREAS.

OVERNIGHT...A STRONGLY FORCED CONVECTIVE LINE WITH EMBEDDED
SUPERCELLS WILL RAPIDLY PUSH THROUGH THE OH AND TN VALLEYS WITH A
CONTINUING THREAT OF TORNADOES AND DAMAGING WINDS.

2610. *** TORNADO WATCH UNTIL 3 AM EST ***

Yahoo group: chattradio
Date: 2005-11-16 03:02:37 UTC
From: Chris Palmgren
Topic: 2610 Message: 2610

URGENT - IMMEDIATE BROADCAST REQUESTED
TORNADO WATCH NUMBER 872
NWS STORM PREDICTION CENTER NORMAN OK
955 PM EST TUE NOV 15 2005

THE NWS STORM PREDICTION CENTER HAS ISSUED A
TORNADO WATCH FOR PORTIONS OF

EASTERN KENTUCKY
EASTERN TENNESSEE

EFFECTIVE THIS TUESDAY NIGHT AND WEDNESDAY MORNING FROM 955 PM
UNTIL 300 AM EST.

TORNADOES...HAIL TO 1 INCH IN DIAMETER...THUNDERSTORM WIND GUSTS
TO 80 MPH...AND DANGEROUS LIGHTNING ARE POSSIBLE IN THESE AREAS.

THE TORNADO WATCH AREA IS APPROXIMATELY ALONG AND 55 STATUTE MILES
EAST AND WEST OF A LINE FROM 50 MILES NORTH NORTHEAST OF JACKSON
KENTUCKY TO 5 MILES EAST SOUTHEAST OF CHATTANOOGA TENNESSEE. FOR
A COMPLETE DEPICTION OF THE WATCH SEE THE ASSOCIATED WATCH OUTLINE
UPDATE (WOUS64 KWNS WOU2).

REMEMBER...A TORNADO WATCH MEANS CONDITIONS ARE FAVORABLE FOR
TORNADOES AND SEVERE THUNDERSTORMS IN AND CLOSE TO THE WATCH AREA.
PERSONS IN THESE AREAS SHOULD BE ON THE LOOKOUT FOR THREATENING
WEATHER CONDITIONS AND LISTEN FOR LATER STATEMENTS AND POSSIBLE
WARNINGS.

OTHER WATCH INFORMATION...THIS TORNADO WATCH REPLACES TORNADO
WATCH NUMBER 868 <http://www.spc.noaa.gov/products/watch/ww0868.html>. WATCH NUMBER 868
WILL NOT BE IN EFFECT AFTER 955
PM EST. CONTINUE...WW 869 <http://www.spc.noaa.gov/products/watch/ww0869.html>...WW 870
<http://www.spc.noaa.gov/products/watch/ww0870.html>...WW 871
<http://www.spc.noaa.gov/products/watch/ww0871.html>...

DISCUSSION...VERY STRONG SHEAR COUPLED WITH A MOIST AND MARGINALLY
UNSTABLE AIR MASS WILL SUPPORT CONTINUATION OF WIND DAMAGE AND
ISOLATED TORNADOES ASSOCIATED WITH BOWS AND LINE SEGMENTS. STORMS
WILL MOVE RAPIDLY NEWD ACROSS WATCH.

AVIATION...TORNADOES AND A FEW SEVERE THUNDERSTORMS WITH HAIL
SURFACE AND ALOFT TO 1 INCH. EXTREME TURBULENCE AND SURFACE WIND
GUSTS TO 70 KNOTS. A FEW CUMULONIMBI WITH MAXIMUM TOPS TO 400.
MEAN STORM MOTION VECTOR 23045.

...HALES

2611. --Static/Noise--

Yahoo group: chattradio
Date: 2005-11-17 23:28:22 UTC
From: chasenlayne
Topic: 2611 Message: 2611

Ok, I have a 99 Model BC245XLT Truck Tracker II scanner, and when I first purchased this 5 years ago or so this thing didn't have much static at all. I live in the North Georgia Area and most of there frequencies are still 150mhz range I picked those up great, including most of the Chattanooga/Hamilton County area 800mhz a few years ago ,but now its terrible static and noise. This past year or so I have noticed that the static/noise has gotten alot worse basicly unable to tolerate. I have another antenna that I purchased a few years ago and it really doesn't help. I was just wondering if a another good antenna would help do the trick or if its time to invest in another scanner.

Could anyone recommend anything whether its a antenna or a scanner?

Thanks

Nifty question with a couple of possible answers. It depends on what you are calling static and what is causing the problem.

More than likely you are experiencing local noise issues of an electronic nature. If this is the case your ONLY solution is to get rid of the noise "at the source." If it is a power line issue, call the electric company and have them fix their problem per FCC regulations. Your noise could be in home as well.

Another possiblity is what you are describing as noise could be a reduction in signal strength. Are you using an outdoor antenna? What kind of coax are you using? How long has that coax been in use? If you use an outdoor antenna and you put on your rubber duck do you still have the problem? If you move around the neigborhood do you still have the problem?

We really need more info in order to analyze and answer your question properly.

Yahoo group: chattradio
Date: 2005-11-18 18:22:19 UTC
From: chasenlayne
Topic: 2611 Message: 2613

I don't believe it to be local noise as because I get it everywhere I travel. Whether closer to the city of Chattanooga, Knoville etc it seems to always been there. Also speaking of powerlines,I live in a new neighborhood that has its powerlines underground, we have no powerpoles/line throughout the area. The only 2 antennas I have are 2 rubber ducky type antennas, 1 is the main one that came with the scanner, and the other antenna is another rubber ducky type that is about 3 inches longer, wide band coverage. Both antennas are terrible to say the least. Its a mobile scanner so I carry it throughout the house it is always choppy and noisy no matter what, sometimes I can sit it a certain way and it will be clear for a few mintues then it dies out. Its just nothing like when I first had this scanner, I have thought about purchasing an 800mhz for the car to help there and then also getting an outside Scantenna for the house. I am not sure what could be causing static in home either. Its just always choppy and nosiy/static wherever I am.

Thanks

It sounds as if your bnc connection on the radio has a loose wire. It works good after it heats up and makes a connection. Then cools off and it gets flakey again. More than likely at the board where it is soldered. Another spot could be the center connector on the radio. You could take a very small screwdriver and push the metal closer together. Be careful not to break a piece off. Unfortunately, radios get old and need to have maintenance done.

From: jeffnkim2004
Topic: 2571 Message: 2625

Larry,
I just talked to a TEMA offical the otherday. And up out of the blue I asked him if we would ever see a 800 system for emergenecy traffic to communicate with all emergency traffic instead of having to go all through a dispatch like what happened down on the coast. His excact words " we will never see that happen in our life time?. He stated they had several digital vhf sights and numerous didgital radios,but like the digital repeater in Benton, TEMA wouldnt spend the money for the extra phone line. It takes 2 and the wouldnt pay for the other. SO who knows whats gonna happen.....It s like its all secret
Would the VHF not serve better for mountains than an 800 system?
Has there been any more freq`s put out for the TEMA, Local Law enforcment ect..???

Yahoo group: chattradio
Date: 2005-11-28 05:15:19 UTC
From: jeffnkim2004
Topic: 2575 Message: 2627

Larry; I talked to a well known TEMA offical in the local earea, I asked him if we would ever seea statewide 800 system for all agengincies to be able to communcate with in case of a disaster here in the TN valley. And his words I state "NO NOT IN OUR LIFE TIME" it all boiled down to a money issue. Iknow the VHF radios that are widley used in tn mountain region is far more compatible to the mountains. Are we ever gonna be prepaired for a disatster and it will happen.As bad as I hate for this day to come we as Americans are not as prepaird for a didaster like what happened at the Trade Center and or New Orleans. Are we gonna run into mass confusion with not being able to communicate with all responders. Is there any way to be able to patch the VHF radios to communicate with high tech Chattanooga radio with out relaying info through dispatchers?

2632. RE: [chattradio] Scan Atlanta YahooGroup

Yahoo group: chattradio
Date: 2006-01-02 20:46:15 UTC
From: Richey Goldberg
Topic: 2630 Message: 2632

No, just tried last Sunday Night (Christmas Day) and today I got rejected.
I mentioned I was a member of Scan Chattanooga, and mentioned a few scanners
I carry so they would not think I was just some spammer trying to join.

From: j_multer
Topic: 2630 Message: 2633

Richey,

Try joining again.

If a request to join is not acted on within 7 (?) days, Yahoogroups automatically rejects any request sitting in the "pending member" file.

Some Yahoo lists are set up to require the owner's or a moderator's permission to join. This helps reduce / prevent spamming on the list.

The owner / moderator may also initially moderate a new member's posts, until the moderator / owner is comfortable that the new member wants to post on-topic messages.

It's possible that Mike, the ScanAtlanta list owner, has been away for the holidays, or unable to access his list e-mail, in order to review pending members.

So, try again.

BTW - there is no secret handshake, although there is a hazing ritual which involves breaching security at the airport to learn the newest TSA and security frequencies in use.

Do you remember reading in the newspaper about the person that police found drunk on the active runway, last November. He was a pending member of ScanAtlanta :)

2637. 4 talkgroups ID'd on Communications & Electronics TRS

Yahoo group: chattradio
Date: 2006-01-06 21:22:30 UTC
From: Jim Knight
Topic: 2637 Message: 2637

054-1 Humane Educational Society. I don't know why they have a talkgroup on this system when they also have one (22288) on the Chattanooga/Hamilton County system, but the many conversations about picking up stray dogs and cats leave little doubt.
089-1 Memorial Auditorium. I ID'd this one several months ago when I heard them discussing preparations for an event which I knew was taking place there. Conversations heard since then confirm this ID.

And now, the recent breakthrough:
311-1 Blue Cross/Blue Shield maintenance
311-2 Blue Cross/Blue Shield security
A long time ago I heard conversations on these which led me to believe they might be at the downtown Marriott. This has turned out to be a false lead. The definitive ID came when I heard the maintenance group say the name of the wife of a friend the other day, and that she had a light out in her office in the mezzanine of the Tivoli. I asked my friend if his wife worked there, and he said yes, she works for Blue Cross/Blue Shield. Other things I have heard now make sense with this ID also. I have long known that the two talkgroups were associated with each other due to the same locations being mentioned on both.

Matthew's list for this TRS also includes 311-3 as the downtown Marriott, but I have not heard anything on this one.

2638. !! IMPORTANT !! - ScanChattanooga Message Forums Announcement

Yahoo group: chattradio
Date: 2006-01-08 03:12:40 UTC
From: Matthew Sadler
Topic: 2638 Message: 2638

Effective February 1, 2005, the ScanChattanooga Message Forums will no longer exist.

I've made this decision for two reasons - one, the forums see very little traffic; and two, the ongoing work necessary to keep phpBB (the forum software) up to date to protect against security vulnerabilities.

I would encourage everyone to visit the forums and save anything on there which is of interest to them.

For those who prefer the forums, I'd encourage you to use the forums at RadioReference.Com.

2641. New MOT System

Yahoo group: chattradio
Date: 2006-02-02 19:27:32 UTC
From: Larry Van Horn, N5FPW
Topic: 2641 Message: 2641

A few months ago a carrier showed up on 151.6475 MHz here in B-town while doing one of our normal bandscans for such activities.

About two weeks ago that carrier changed to a Motorola control channel. So far NO activity has been noted and no system ID has been displayed when in the control channel mode on the 330/396. There is nothing for our area licensed on the FCC website. Basic DFing by Bob Grove and I place the signal west of here towards Polk County, TN. It is very strong (I can still hear the signal on a rubber duck antenna in select spots with the unit in my lap in the car.

I am curious if anyone in the Chattanooga area north is hearing this Mot CC? Anyone know who it belongs to?

73 and good hunting de Larry.

Hummm, you can read our First Look review of the 2096 on the MT website for free Jay. Point your browser to

http://www.monitoringtimes.com/html/mtrspro2096.pdf

From my bottom line:

Radio Shack Pro-2096
By Larry Van Horn, N5FPW

Overall Rating and Final Thoughts

There is a lot of scanner here for the money. Overall, I like the Pro-2096. I do have a few complaints that potential buyers should note. First, there's no LTR trunking capability. If you have a public safety agency or business that uses LTR trunking, you will have to conventionally scan that system. Second, there is no military air coverage (see text above). Third, unlike most of the Uniden trunk trackers, there is no built-in computer interface or software (see specifications below), and no flash updating of the scanner firmware. And, while the screen is nicely laid out, it is small and somewhat difficult to read. If you are visually impaired you will have trouble seeing this screen.

If you purchase the 2096 and use it for trunk tracking a Motorola 800 MHz analog trunk system, the FCC rebanding of the 800 MHz band may become an issue at some point. Once a local agency has been rebanded, the unit will no longer trunk track that system and the unit will have to be sent back to Radio Shack to update the firmware.

Looking past the issues above, I like the Pro-2096. It is an excellent scanner and worthy of a spot in your shack if you are interested in Public Safety comms. The manual is one of the best I have seen, scanner performance is very good, and the unit is very easy to program and use.

MT Rating: Four Stars

This scanner does NOT get the higher marks of the Uniden scanners. While the price may be inviting, you WILL loose your scanner when Chattanooga rebands their trunk system in a cyear or two. Given the large amount of bench time and units that RS will be working on, you could loose your scanner for quite some time. As I have said before, you get what you pay for and while the price is nice, it is NOT as capable as the Uniden line.

From: Robert
Topic: 2641 Message: 2656

I decided to take a drive up to Murphy yesterday to see what I could find out about this trunk system. I went up 64 and heard nothing, all static with the squelch turned all the way down, until I got to the state line. By mile marker 2 the signal was strong enough to break the squelch. In downtown Murphy the signal was pretty week again, but by Wally World it was strong again. I tried to record what was going out of the discriminator tap with a digital recorder, but when I got home uni trunker would not pick it up. Next week I will see if I can dig up my old tape recorder and see if that works better.

First of all John welcome to the beautiful Brasstown valley. You drove right past the Grove Enterprises building. The strip you are talking about is private and belongs to (drum roll) another Payne named Vic. He houses his private plane there and also uses the strip to fly model RC planes (he has lots of money, more than I do). ;-)))

There are zero freqs (except 72 MHz RC freqs) in use. Sorry.

ABout the hotest secret freq in the B-town area is the Grove freq, but that is classified and I would have to kill you if I told you that one. ;-)))

Subject: [chattradio] New Airport or Ultra Light Port ?

Just asking ?
I was driving East on 64 hwy in Cherokee County NC near the Clay County Line and happen to see what I take is an Airpot or Glider port of Ultra Light Airstrip ! Dose anyone have any info on this and do they have any found frequencies from Air to Ground ect.

Thanks for any info

Hey Larry
Thanks for the info ! I'm from the Andrews area and have been in Franklin just about a year now. Just now getting use to all 400mhz frequencies here in Macon county.
Once again Thanks for all the help !

First of all John welcome to the beautiful Brasstown valley. You drove right past the Grove Enterprises building. The strip you are talking about is private and belongs to (drum roll) another Payne named Vic. He houses his private plane there and also uses the strip to fly model RC planes (he has lots of money, more than I do). ;-)))

There are zero freqs (except 72 MHz RC freqs) in use. Sorry.

ABout the hotest secret freq in the B-town area is the Grove freq, but that is classified and I would have to kill you if I told you that one. ;-)))

Hey John,

Well about the time you get use to 400, 800 VIPER will be on its heels. Not to bore the list with some of our west NC stuff that the gang at Chattanooga can't hear, Drop me a note at n5fpw@... and lets exchange some freq stuff. You can catch my latest online list at:

http://www.monitoringtimes.com/html/Quad.pdf

I have some questions about Macon Co scanning especially the SO VHF and new 400 MHz stuff over there.

73 all and John look forward to chatting offline.

Larry, after reading several of your post and monitoring times
articles from your prospective which scanner would be the more
favorable to you? Thanks Jeff

Hummm, a loaded question. I am partial to the Uniden models simply because they have dynamic memory (read my reviews on line at (www.grove-ent.com) if you don't know what that is. All though 396 has some very very minor issues regarding some types of digital reception on certain systems, that is about to change thanks to a firmware upgrade.

My biggest issues with the RS scanners is four fold.

1) No dynamic memory. You won't realize how much you need such a thing until you have it. Programming banks is old school now. I am a huge convert in this regard.
2) You will lose your scanner to the radio techs when 800 MHz rebanding occurs in our area.
3) No milair. Even if I may not use it for such reception, I do shake things up from time to time and reprogram the shack (i.e. my scanners) for various things, events and monitor capability. During 9/11 Milair and Civair played a major role in my monitoring. If the radio doesn't have milair, is it a dead radio for me. I won't give it a second look. RS only has two that do milair and their popular Pro-96/2096 digital scanners are not milair capable.
3) I am nervous that Radio Shack keeps cutting back on services (no more Police Call) and stores. GRE makes a nice product but its future in this company is somewhat dependent on RS being around. The jury is still out on this one.

Uniden has a couple of new units coming out (including a new digital base/mobile model the BCD-996T). They look very interesting. It will be interesting to see how these radios perform and what new goodies they will offer in new features.

2671. Thoughts on some scanners

Yahoo group: chattradio
Date: 2006-03-28 04:35:29 UTC
From: Richey Goldberg
Topic: 2668 Message: 2671

Ok so I am going to buy another scanner. I already have some radios that can track the Trunked systems in Chattanooga at least for now. I know that there isn't an answer to What is the best scanner question but maybe if I list what I am going to use the scanner for and someone has use one of these they can give some what they like/dislike about them.

What I am looking at and they are likely to be Ebay buys.

Icom R10
Yaesu VR-500
Kenwod TH-6F (I know it's not technally a scanner)

I want to listen to Military Air with this radio and I also like the SSB option on these radios. I know that I wont hear much riding around with the stock antenna but I do have some mono band ham sticks I can use with these scanners while mobile.

I threw the Kenwood in because of it's SSB and because I am a ham. Also because of it's ability to duel band receive. The thought of carrying 1 radio at times is appealing.

Richey - KI4KGR

>stock antenna but I do have some mono band ham sticks I can use with these
>scanners while mobile.

NO NO NO NO. My friend you do not get something for nothing. Why do you think they make HF radios that cost 4 figures? How do you think a $500 HF-VHF-UHF radios will compare with radios that cover just HF or just VHF/UHF?

Rule No 1. You want a good shortwave, buy one.
Rule No. 2 You want a good VHF/UHF scanner buy one.
Rule No. 3 You won't get both in one package unless you pay over 4 figures.

Milair is what I call the quiet hobby. Unless you are next to a major base, your scanner will stay quiet most of the time. That means you need to have a scanner loaded with ONLY milair in order to catch the good stuff. Mix it with anything else and those comms will dominate, not the brief milair comms you seek. There are 7,000 milair freqs that could be in use in this area. Unless you want to be disappointed, that is how you need to set it up. Oh yes, unless it is ham, there is NO SSB transmissions in the VHF/UHF spectrum.

Now let's turn to SW and SSB comms on these rigs. Bottom line horrible. These rigs just don't have the sensitivity, selectivity, and dynamic range for satisfactory reception equally across their entire tuning range. It looks inviting to get everything in one package, but in practice, it just does live up to even minimal expectations. Oh yes it will hear some of those 250/500 kW powerhouses, but you won't hear my 100 watt ham shack or a 1000 watt aircraft traveling across the Atlantic. For utility work (non bordcast, ham or cb) these radios are the pits. And when you are listening to that AM (Shortwave or mediumwave), FM or TV station, the radio isn't scanning all the other freqs you have programmed.

>I threw the Kenwood in because of it's SSB and because I am a ham. Also
>because of it's ability to duel band receive. The thought of carrying 1
>radio at times is appealing.

Now we are asking the radio to transmit ham. We want one radio to do three things. I use to think along those lines and I have since completely rethought everything now that I have spent 13 years testing and evaluating all sorts of radios at Grove.

>I know that I wont hear much riding around with the stock antenna but I do have some >mono band ham sticks I can use with these scanners while mobile.

If you are going to buy one of these all band wonders, please don't go in with your eyes closed. It is more than just motoring around with the stock antenna that is the issue. They all ar a compromise. And if you ask it to do more than it is capable you will be disappointed. Why do you think the owner is dumbing it? Probably because they need to have a newer scanner with all its listening capability and the original thought of an all in one when they purchased it didn't pan out.

Let me leave you with this thought. We have a 5,000 watt AM radio station on 600 kHz that I can see the tower from the parking lot at Grove. Using the stock antennas and several others as well I could bearly hear the station on the R-10 and VR-500 (can't vouch for the Kenwood).

Good luck in your choice.

Matthew,

I just got through looking over that radio. I recently bought a RS Pro-2096 but
as Larry recently mentioned here it doesn't have the MilAir band. I was almost
ready to buy the 396T but noticed it doesn't have alphanumeric channel tags.
That one item shot it down. I've really come to love the tags, specially since
at my age I suffer from CRS syndrome real bad and it would be impossible to
know what was what w/o them. Possibly the BCD-996T will fix that.

Regards,

Karl
(CRS - Can't Remember Squat)

P.S. I've had scanners for many years and this 2096 is the most God awful thing I have
ever seen trying to figure out how to program.

Hi Larry,

That's right, now I have myself all confused! The model I meant wasn't a handheld.
I'll have to try and figure out what I meant to say. The thread was about the realignment
of trunked systems and how a lot of trunk trackers are not reprogramable. I believe
lack of MilAir in the Pro 2096 was also mentioned. Off to the forum to try and reprogram my brain!

From: Jay
Topic: 2678 Message: 2678

I have a pro-2067 scanner that the main board went bad in. Radio Shack wants $169.00 to fix it and I decided it wasn't worth it. Is there any reasonable place to get this fixed? Otherwise, I suppose I will sell it cheap to someone who might need it for parts. I hate to throw it away if someone could use some parts out of it. Any advice? Anyone need a 2067 for parts? Thanks.

Jay

The going price for a 2067 in good condition is probably under $100 at this point, but it's not likely anyone would repair it for under that price ... particularly if they have to get a new board through Radio Shack.

Also, the fact that the scanner won't survive rebanding (for Motorola trunking), cannot handle splinter frequencies properly, and has a limited number of channels will reduce its usefulness as time goes on.

IF you want to get a second estimate, e-mail the folks at G & G Communications in N.Y. They have a good reputation for scanner repairs, although the demand for their services means you will sometimes wait for the repair to be done.

You can contact G & G through their website ...
http://www.iinc.com/ggcomm/

G & G might even be interested in buying your 2067 for parts.

If you're considering a replacement mobile scanner, take a look at the advance material for the Uniden BCT 15, which should be available in late summer.

2680. AVL for Hamilton County EMS

Yahoo group: chattradio
Date: 2006-04-21 03:59:43 UTC
From: Matthew Sadler
Topic: 2680 Message: 2680

Hamilton County EMS will be getting vehicle locator equipment installed soon in most of their ambulances, according to an article in the April 20 2006 edition of the Chattanooga Times Free Press.

The County Commission approved purchasing equipment to outfit 21 ambulances at a cost of $50,410. They expect to be up and running within 60 to 90 days. The next phase of the project is the installation of notebook computers in the ambulances to allow communications between the ambulances and dispatch, as well as provide in-car (er, ambulance) mapping.

I read the article, and it sounds like a great idea, as long as management is not allowed to MISUSE the data for other purposes. First time somebody gets written up for spending a minute or two longer at the Waffle House than the radio logs reveal, the damage to morale will quickly outweigh the benefit of any improvement in emergency response time.

Will the location data be available only inside the ambulance, or transmitted back to the dispatch center? If the latter, any chance it is monitorable by someone else? That might be interesting but probably also a security risk.

Hello,

Give them a call or stop by and ask them for it. A lot of law enforcement appreciates the public
monitoring them. Is worth a try and you may be surprised how well the direct approach will work
now and then. All they can do is say no.

Regards,

Karl

2691. Eglin AFB

Yahoo group: chattradio
Date: 2006-05-09 14:46:02 UTC
From: Richey Goldberg
Topic: 2684 Message: 2691

Has anyone got a source for frequencies in the Destin area. Googling isn't turning up very much. I am especially interested in Air Force Frequencies from Eglin AFB. Were getting F-15 fly overs at a rate of at least 1 every 30 minutes. So I figure there has to be a good change of catching some Air to Air or at least Air to Ground comms.

Hi,

Have you tried giving them a call or stopping by and asking them for the list?
You might be surprised how well the direct approach works. Most law enjoys the public monitoring since they act as additional eyes and ears. Also keep trying
some Google searches, almost anything is already available online you simply have to go get it.

BTW the correct name is Georgia State Patrol, I assume that's what you are asking about. There is no Georgia Police.

Good luck.

Richey,
I don't have the info you have requested, but I can point you in the direction of someone who probably does.
Prior to Katrina there was a gentleman named Jimmy who was operating an online scanner in the Mississippi Gulf Coast area. Katrina shut him down for a short while, and then he returned briefly until equipment failures shut him down again. His operation was one of the best I've heard, and I do recall that post-Katrina he had excellent coverage of military frequencies. Although he is a few miles to the west of the area you seek, I suspect that he may have the info you want.
You can find him by going to
http://groups.yahoo.com/group/LiveScannerAudio/

Go to messages and do a search for "Mississippi" Continue the search until you reach message number 15464. I realize that Yahoo Groups will normally let you go directly to a message number, but I can't seem to get that function to work at this time.
Hope you find the info you need,
Richard

From: mws6533
Topic: 2694 Message: 2694

There have been two people testing all over the place in Catoosa County over the past few days on talkgroup 32816 on the Chattanooga system - in digital mode, using handhelds. Most everywhere they have tested the radios they've worked well, including inside of many buildings where the Sheriff's VHF repeater doesn't work well at all.

My guess is that the Sheriff's Department will be coming on board in the not too distant future, some of the traffic indicated that they are buying the radios as opposed to just testing them.

2696. Eglin AFB To tuck away in the archives

Yahoo group: chattradio
Date: 2006-05-13 03:37:43 UTC
From: Richey Goldberg
Topic: 2694 Message: 2696

Well I spend some time searching with my R3. I found some stuff that was pretty active down here. I enjoyed listing to the "Dragnet" direct the "Vipers" to the "Cylons" for a few days. That is the AWACS were guiding F15s to intercept B1B Bombers. Heh I love the SciFi squad names. They were very active on the comms while I was sitting by the pool Wednesday and Thursday. At night there was quite a bit of Air Refueling practice with emergency break a ways. Tonight has been pretty dead. It seams that some days are active and some are really dead. Anyways I thought I would post what I found for anyone who might vacation in the Destin area and would want a place to start. I heard coms at least 25 to 30 miles out to sea and probably farther but I only heard pilots mention their distance out from Eglin. I searched and searched and found nothing for frequencies for Eglin. Here is a list of what I put in to my scanner and a couple of keywords to make searching this easier. I grabbed most of these by listing to the pilots before the started playing. They gave each "sides" frequencies so if you can catch them before they get started you can get all the info you need.

Nice List Richey. If you head down that way again, be sure to contact me before you go and I might have a few thing for you to check out.

>223.284 AM

Bad bad freq. +1.7 MHz below the Milair band and it is in the Amateur 220 MHz band (although it doesn't fit that bandplan either. ;-))

>290.900 AM

USAF Eglin AFB FL Eglin AFB Mission U-12

>341.750 AM

This is a JStars and AWACS nationwide (USAF Command and Control nationwide discrete)

>338.750 AM

USAF Eglin AFB FL 33FW/58FS Air-to-Air

>264.700 AM

USAF Eglin AFB FL Range Control/Operations

>262.300 AM

USAF Eglin AFB FL Range Control/Operations U-14 Eglin Mission-East/R-2914 Range Control

>260.275 AM

USAF Eglin AFB FL 33FW Operations

>253.610 AM

Not a valid frequency. Remember except for satellite freqs (and this isn't one of those) the spacing here until you get to 380 MHz is 25 kHz. You probably had...

253.6250 USAF Eglin AFB FL Over-water CAP Tac Frequency U-17

>313.200 AM

USN FACSFAC Pensacola FL Primary U-15 Seabreeze c/s

>314.050 AM

USAF Tyndall AFB FL Ground Control Intercept Operations Wetstone c/s

>262.300 AM

Ditto above

>223.275 AM

Same comment as 223.384 MHz above. Not mil aero.

Again if you head that way again, let me know.In fact, if anyone on list is going to be around a mil base on vacation or whatever, contact me offlist and I will be happy to work on some monitoring targets for you.

From: SparkS
Topic: 2698 Message: 2698

Some questions from a newbie on this freq band. I've searched and come up with over
30 freqs. It's a pretty esoteric band but is somewhat interesting. Like the gripe about
the windshield wiper not touching the windhield. GGGGG

1. It appears each freq is for a particular airport and possibly for an individual airline.
Is this correct?

2. After numerous Google hunts I cannot find the info I want. Is it possible to find a list
of the freqs for the airlines and the airports they are associated with?

Many thanks for any info!

Let me see if I can help you...
Most aircraft 118-136.000 frequencies are assigned to airports for control and direction of aircraft in there airspace, and regional air traffic control facilities that direct aircraft en route from place to place not to airlines or companies. That being said there are some company specific frequencies, but they are mainly only used near major airports. There is a network of frequencies around the US licensed to a company called Arinc that provides both voice and data communications to airlines also.

Hope that helps clear the mud a little,
Mark Mc.

2702. Re: [chattradio] AERONAUTICAL ENROUTE STATIONS

Yahoo group: chattradio
Date: 2006-05-16 03:33:15 UTC
From: SparkS
Topic: 2698 Message: 2702

Frank,

I honestly don't see how freqs that pilots use to report gripes or whether they need
a wheelchair can be security related. I see freqs and military aircraft info posted on some
groups that I think go way over the line on security. Personally the movement of military
aircraft is no ones business but the ones related to it. So maybe you can see that I am
very hard core when it comes to security. For what it's worth I spent 20 years handling
some extremely highly classified comms. I don't think aeronautical enroute sites info fits.

SparkS

BTW I have no doubt the posters, and 99.9% of the readers, all have good intentions. It's
the snooping eyes that may belong to those that wish us all harm that bother me.

==========

It may be because that some info is ment to be restricted for the safety all US citizens. Let us not for get 9/11 when terrorist came to our country and took flight lessons under our noses. So restricted info should stay that to prevent any other attacks. That's my 2cents

I suspect that the answer will seem obvious once I've heard it, but can anyone tell me why these aircraft comms (118-136 mHz) are AM rather than FM?

Hmmmm, here's my WAG. AM had been around for some time before FM was designed in the
early 1930's. Perhaps by then air to ground comms were common enough in AM mode that
the system simply evolved with that format rather than a brand new form of modulation?

I think Air is AM because if a station has an emergency while another station is transmitting that station with an emergency has a greater chance at getting through using AM as apposed to FM. If you are listing in FM mode you will hear only the strongest station. In AM you can hear a second station, though not always understandable.

Not fact, but my best guess.

2707. Why AM not FM

Yahoo group: chattradio
Date: 2006-05-17 03:15:27 UTC
From: rdl014
Topic: 2707 Message: 2707

Whomever said it was because AM was already established and FM wasn't is correct. I am an old USMC military pilot from the 1960's - 1970's and that is what they told us. Think how much it would costs for every aircraft and every airport to change all their radios. Emergencies are broadcast on special frequencies on VHF and UHF (126.5MHz & 243.0MHz) so you would not have interference unless you have multiple emegencies going on at the same time, which did happen while I was in VietNam. When that happens, you switch to another channel or take turns transmitting.

I am sure if you need the other frequencies, you could go to a local flight school and they would probably let you look at the various IFR charts and publications and they list all the frequencies. They might even give you one of the old publications as they are updated frequently.

Try this link from Radioshack I was able to find.

http://support.radioshack.com/support_tutorials/communications/20-522.htm

It doesn't let me download the manuals, they must be to old cause there's not a link. Hope this helps.

Use the following link, instead:

http://support.radioshack.com/productinfo/DocumentResults.asp?
sku_id=20-522&Name=Search%20Results&Reuse=N

There were some differences in the Pro 92 models, so check the
product tag on the back of the scanner for the presence of a "B" with
the model number. Then click the appropriate manual link. The file
will be in Adobe Acrobat format.

Google is your friend.

Each agency may modify this a little but this is the list for the State of Georgia.

10-1 Receiving poorly
10-2 Receiving well
10-3 Stop transmitting
10-4 OK/understood
10-5 Relay
10-6 Busy/not available
10-7 Arrival on scene
10-8 In service
10-9 Repeat
10-10 Temp out of service
10-12 Stand by
10-13 Weather/Road conditions
10-18 High rate of speed
10-19 Return to station
10-20 Location
10-21 Call _____
10-22 Cancel/disregard
10-23 Contact licensed driver
10-25 Request criminal history
10-26 Request drivers history
10-27 Request drivers license info
10-28 Registration request
10-29 Check NCIC
10-30 Unnecessary radio traffic
10-33 Emergency
10-36 Correct time
10-37 Pullover/traffic
10-38 Pullover/suspicious criminal
10-39 Resume routine traffic
10-41 Beginning tour of duty
10-42 Officers residence
10-59 Escort/convoy
10-60 In the area of
10-74 Negative
10-75 Make contact with _____
10-76 Enroute
10-77 ETA
10-81 Intoximeter test
10-86 Operator on duty
10-95 Prisoner in custody

10-99 Wanted/stolen indicated

yes I was able to find those on Google also but Catoosa County has used many 10 codes that aren't listed anywhere I as others are curious to what those codes stand for. I have figured out some on my own just by numerous calls but others I am still figuring out. Thanks for the help though

2718. Catoosa 10 codes

Yahoo group: chattradio
Date: 2006-06-05 22:19:55 UTC
From: Fred White
Topic: 2718 Message: 2718

I live in Catoosa County and have followed their system since way back when they had only one frequency (154.845).

I talked with a friend who works for Catoosa. He tried to get me a copy of the codes but just couldn't swing it.....He was able to find that with very few exceptions their codes are the same as Whitfield County.
http://www.whitfieldcountyga.com/sheriff/whitfield_county_10_codes.html
(Copy and paste)
Catoosa also uses status signals and codes which I don't have. Hope this helps......Fred

Subject: [chattradio] Re: Georgia 10 codes

yes I was able to find those on Google also but Catoosa County has used many 10 codes that aren't listed anywhere I as others are curious to what those codes stand for. I have figured out some on my own just by numerous calls but others I am still figuring out. Thanks for the help though

2720. Catoosa County to partner with Chattanooga for communications infrastructure

Yahoo group: chattradio
Date: 2006-06-08 02:58:53 UTC
From: Matthew Sadler
Topic: 2720 Message: 2720

Confirming what I'd suspected to be the case after the recent communications tests over on digital 800:

http://news.mywebpal.com/news_tool_v2.cfm?show=localnews&pnpID=724&NewsID=724354&CategoryID=11571&on=1

They will need about $1.2 million for the radios, plus another $50,000 or so annually. The article says that testing with Chattanooga's system indicated about 80% coverage, compared to the 50% to 60% they currently have, and adding one and possibly two new sites would provide close to complete coverage.

Looks like it belongs to Blue Ridge Mountain EMC per the FCC db. It isn't listed as a TRS but it sounds like a TRS cc. We are still looking into this.

Now how are they coming up with better coverage on 800MHZ than VHF?
What, did they already put satellite recievers in Catoosa or is it
going straight to the tower?
```

Usually the police are on City Net 1 Hex: 419 Decimal: 16748
I'm not sure if EMS is on the same talkgroup or not. I did notice that
Riverbend staff carry Motorola CP series they look like UHF antenna's
on them anybody know the frequency and PL/DPL if any?

2727. 800mhz Antenna

Yahoo group: chattradio
Date: 2006-06-13 22:44:17 UTC
From: chasenlayne
Topic: 2727 Message: 2727

I have searched the chattradio talk group list for recommendations on Antennas that help with the 800mhz Truck RS for Chattanooga. I have noticed that many suggested the 800mhz Mag Mount Cell Phone Antenna, the problem I have is I have searched Radio Shack, Walmart, Target, Circuit City, Docs Communications(Rossville), various Cell Phone service stores and I havn't been able to find this antenna anywhere, does anyone know of a place around town that sells this type of antenna. Second thought was just to order one online and then thought I would get some input on antennas here before I go into ordering anything. I have a BC245XLT and just looking for an alternative antenna such as Mobile and Heldheld antenna recommendations would be welcomed. This stock rubber ducky antenna just isn't cutting it. I mostly listen to the Chatt 800mhz trucked system which is mainly the antenna band range I was looking for. Thanks

2728. RE: [chattradio] 800mhz Antenna

Check with C.T. Morgan & Associates, 629-7911 ask about the 2m/440/800 Iron Horse antenna..we've affectionately nicknamed it "the hersey kiss antenna". Best small scanner antenna I've found for a handheld. Best of all they come with a BNC connector.

I have been using the Grove Super Stealth Mobile Antenna for a long time now. It is one of the best scanner antennas on the market for the money if you don't need to monitor below 144 MHz. It will work down there but not as good as what it is cut for. 800 MHz reception is excellent. I get reception on the Chattanooga TRS starting at Ducktown and the Cobb Co GA TRS between just south of Elijay. It is a small footprint mag mount that I have used at speeds over 100 mph and in all sort of weather cx including ice and ice fog. It has not departed the car like others.

It gave me excellent performance on our trip during April with the BCD-996T and we used it to monitor over 100 different trunk radio systems throughout the radio spectrum. It has a BNC on the end.

Oh, and the best part, $19.95.

Check it out at http://www.grove-ent.com/mobileantennas.html.

2730. Soddy Daisy Police - Only hearing Dispatch

Yahoo group: chattradio
Date: 2006-06-15 10:23:02 UTC
From: polygonskull
Topic: 2730 Message: 2730

Hi.

I entered the following information from ScanChattanooga.com for
Soddy Daisy's system:

21872 Main Channel

Soddy Daisy now uses the 854.9625 MHz conventional repeater as their
main channel but transmissions by the dispatcher are simulcast on
both this talkgroup and the repeater.

21904 Car to Car
21936 Administration
21968 "District"
22000 Investigations 1
22032 Investigations 2

It seems i only get tranmissions on the 21872 Main Channel, and it's
only the Dispatch i hear.. On June 13th, i happened to catch them
testing their radios around 3:00pm. For a little while, i could hear
all communications. Apparently using "channel 2". When they were
instructed to "go back to channel 1" it became dispatch only again.

Why is this? I wish i could hear all sided communication.

Yeh, i stumbled across Riverbend activity on the City Nets 1 and 2. I believe it's where i heard reports of the guy that jumped off Walnut Street Bridge...

What are the City Net groups used for besides special events? I've just recently gotten into trunking. Early this morning, around 2:00am, i just kept hearing a party say "Got it..." every minute or so on the City Net 2 channel.

So I guess the guy jumped off the bridge, I heard the dispatcher warn
every officer to be on the lookout, then I went to another talkgroup.
but, I'm not sure what City Net talkgroups are used for normally. Maybe
someonelse here knows. Anybody found any UHF freqs for riverbend staff
yet?

If you can't get pro92 repaired I know a person who has a
PRO95 in like new condition already programed with
Chattanooga and Ga. freqs. can be bought for $100.00
or less. It belonged to a friend who passed away.
If interested contact me and I can put you in touch with
his widow. fwhite36@...

Topic: 2733 Message: 2736

Receiver developed a startup low level "whistle" on all frequencies, which would disappear after about 30 minutes of operation. I shelved the Pro92 in December when Santa brought Pro96. Turned it back on a couple of weeks ago. Got some really bizarre receiver malfunctions, such as receiving Weather Broadcast (162.55) on local VHF frequencies. Shortly thereafter, receiver died, receives nothing on any frequency. Still scans, squelch and volume work, all programming functions are ok. Connection between BNC and circuit board was suspect, but it would seem that the unit should receive strong signal, such as FRS transciever a foot or so away, even without antenna. Have repeatedly tried reset, and I've initialized it several times. Still silent.

Hello, to Mr Larry, I was searching through the Grove Cataloge at the 396 T unit. There is a download page that take me to the Uniden web sight. There is several downloads. If I was to purchase a 396 today what downloads would I need to use and what order would they need to be installed. Thank you Very Much,

Larry,

I was up your way over the weekend and tried to see what I could com
up with on this frequency. My BR330T would not recognize it as a cc
and it sounded a little different than other Motorola systems that I
have heard. I know that there are a few other systems than Motorola,
maybe it is one of them. The only other thing that I can think of is
that it might be some sort of telemetry.

Robert

That's the CPD Traffic Division using their traffic accident reconstruction software. They are plotting points for the diagrams to build a computer model of the scene. Any time you hear a traffic fatality, just wait for a little while and you'll start hearing that, usually on one of the City Net talkgroups.

Their transmitter probably died. Again.

Most of the stations in Chattanooga feed to Comcast over fiber, but the satellite people pick them up off-air and feed that back to their uplink facilities. I know 3 and 9 both feed to Comcast over fiber (but they have the capability to receive off-air if there is fiber trouble).

When I worked at 3 in master control we'd get called by DirecTV if something went wrong with the transmitter.

2744. VEC and Pro96

Yahoo group: chattradio
Date: 2006-07-22 20:29:52 UTC
From: Richard L. Elliston
Topic: 2744 Message: 2744

Last night, during a prolonged power outage, I wanted to monitor Volunteer Energy at 451.075 mHz, which unfortunately is a Pro96 "birdie" frequency. Earlier scanners, such as the Bearcat 200XLT, had a 21.4 mHz reflection, which could be used to avoid birdies. For example, a signal normally heard at 450 mHz might also be heard at 471.4 mHz. (2 times Intermediate Frequency)
For obvious reasons related to cell blocking, the reflections are not as easily available on today's scanners. Can anyone tell me if the Pro96 has a reflection frequency which survived cell blocking? I have not had any luck with 472.475 mHz.
The VEC signal is relatively weak in my area, so the commonly suggested solutions of adjusting the squelch, mode and attenuator settings simply do not work.

2745. hamilton county trunking system having problems?

Yahoo group: chattradio
Date: 2006-07-28 00:29:55 UTC
From: polygonskull
Topic: 2745 Message: 2745

Ever since the big storm that hit last week, i've noticed alot of the channels, chatt pd, hamilton county sherrif, EMS have been coming in extra scratchy and breaking up. Whenever a Trunk ID using 858.762 it's usually worse.

I've also noticed Chatt PD Baker channel using 866.60000 to dispatch sometimes. This was one of the frequencies listed in a new set of freqs found, but not used by anything.

I'm wondering if one of the towers got damamged during the storm, and if they are fixing it. Can't even listen to the scanner without being annoyed by the bad reception. The 866.60000 comes in REAL bad... almost white noise.

Topic: 2746 Message: 2746

I now have the following talkgroups on the C&E system confirmed or strongly suspected:

303-1: STS Transporation. Confirmed by sighting van at a location mentioned on the air.

400-4: Read House maintenance. Fairly certain on this one since I have heard them mention the Green Room and Gold Room.

302-1: Dillard Construction. Saw truck at a location mentioned on the air.

312-1: Something connected with the Alexian chain of retirement homes. Not real clear if they are at one or multiple locations, but I did hear the dispatcher say "Attention, all Alexian drivers" one day.

2747. BFI gone from Tri County TRS?

Yahoo group: chattradio
Date: 2006-08-02 21:57:51 UTC
From: jim knight
Topic: 2747 Message: 2747

Talkgroups 500-1, 500-2 and 500-3 on the Tri County TRS were heavily used by BFI, so much that I usually kept them locked out. I unlocked them recently and it appears that BFI has "left the building". Now there is only occasional talk on 500-2 and it sounds more like a heavy equipment company.
Even though I kept them locked out most of the time, it was nice to be able to tune into BFI early in the morning. If there was a traffic problem somewhere, you'd probably hear about it from BFI before it was on the local news.

2760. Voice Inversion and a new repeater

Yahoo group: chattradio
Date: 2006-09-13 12:53:42 UTC
From: Robert
Topic: 2760 Message: 2760

Athens PD has started using voice inversion on their dispatch channel 151.1000 and on "Tac 2" 155.4150. They are using nearly 100% from what I heard until I locked out those frequencies. :-(

Athens also has a new repeater 453.8000/458.8000, it is being used by the public works department.

2761. Re: Voice Inversion and a new repeater

Yahoo group: chattradio

From: Richard L. Elliston
Topic: 2760 Message: 2761

I think the voice inversion was fully implemented on Saturday, Sept. 9. I travelled through Athens at about 3:00 PM, and a few transmissions were scrambled. By 11:00 PM, when I came back through, it was 100%. A quick look at the search engines will reveal that there are abundant software and hardware solutions, but I'm not buying. I'm confident that rural county law enforcement politics will solve the problem for us. Hint: Watch the reaction of the constables carefully. I predict that within a couple of weeks we'll be chuckling about the time that APD experimented (politically, not technically) with voice inversion.

I wish they would use inversion like Loudon County does. They switch to inversion when they give out personal information, DL#, SSN ect. or when it is known that someone that they are after is listening.

For the past few month I have heard the inversion very sporadically, either testing or possibly detectives. I have never heard a constable on APDs frequencies, I'm not sure they do much here outside serving papers and such. There is a "Charlie 1" on McMinn counties frequency that is possibly a constable, still trying to figue it out.

Is it a coincidence that the move to 100% scrambling took place a day after the county's jail break occurred ... during which one of the jailer's radios was taken by the inmates ?

Although inversion scrambling doesn't make the communications totally secure, it is a step in that direction if someone in the Athens Police Department has decided they need to move in that direction.

(Footnote - I would not have been aware of the jailbreak, except that the Blue Ridge Parkway dispatchers had broadcast a couple of bulletins / BOLOs regarding it on Friday morning. I enjoy hearing the bulletins from agencies, but it seems like the number of bulletins being broadcast is dwindling as more and more agencies issue them via MDT or laptops.)

2772. Athens police switch to unintelligible encrypted radios (DPA)

Yahoo group: chattradio
Date: 2006-10-02 19:54:05 UTC
From: Larry Wilson
Topic: 2772 Message: 2772

JEREMY BELK

Staff Writer
Local News

Police scanner enthusiasts can no longer listen to the Athens Police Department now that the switch has been made to an encrypted radio communications system.

APD is switching its 55 portable and patrol unit radios over to an encrypted radio system, which scrambles transmissions received by police scanners and radios that do not have a special descrambling board installed inside.

Chief Chuck Ziegler said the transition to a completely encrypted system will take a few weeks to complete and get problems resolved.

Ziegler said the department is making the change because lawbreakers often use police scanners to monitor radio traffic as a way to avoid getting caught.

"It has become very common for criminals, such as drug dealers, meth manufacturers and burglars, to use commonly purchased radio scanners as counter surveillance," Ziegler said. "We´ve found in Athens people are able to monitor our radio traffic to determine patrol zones and what officers are on duty."

Ziegler described the encryption board which is being used as "like a copyright." He said no one can purchase a board to descramble APD transmissions without the department´s approval.

Scanner traffic from APD first went from normal voice transmission to a series of garbled speech and rhythmic noise starting on Sept. 11. Ziegler said he has already heard complaints from people in the community who enjoy listening to law enforcement traffic.

"The unfortunate side to this is there are a lot of people who enjoy listening to what the police department does," Ziegler said. "However, the same info is being used as counterintelligence by criminals."

Ziegler said it is amazing at the amount of people who have scanners. He said often times officers will be called to a disturbance or a party and when they arrive nothing is happening because someone at the location had been listening to a scanner and alerted others that the police were on the way.

Secure communications, according to Ziegler, is a necessity in police work.

APD officers and dispatchers can still communicate with other agencies by switching the encryption off.

Many of the officers said the system has bugs that need to be worked out.

McMinn County E-911 Director Jim Davis said the Athens Police Department using encryption will not affect county dispatchers and he supports the department´s decision to switch to an encrypted radio signal.

"The only problem we will at the E-911 dispatching is we will not be able to monitor city police traffic when they are encrypted," Davis said.

APD Patrol Capt. Rob Davis said if an APD officer needs to contact an outside agency the encryption could be turned off to use another channel on the scanner or the Athens dispatch center could contact the appropriate agency.

Davis said in the case of an emergency, such as a tornado or other natural disaster, encryption could be turned off on the radios; however, the intent is to use encryption on all radio communication.

Davis said the department has received a few complaints from citizens asking why their communications were scrambled.

Funding for the new scanners came from federal forfeiture money the city received from the White Spider prostitution sting. A local massage parlor was raided by local and federal law enforcement in conjunction with a nationwide investigation to illegal activities in massage parlors located across the country.

Seems like it is here for good. The system is definitely not encryption, you can make out the tones in different peoples voices. I think it is a voice inversion system, possibly with rolling codes (you hear a click every second or so)

What rocket scientist in the APD thought this mess up. As I understand it the encryption that Athens uses is a simple voice inversion scheme. While I won't point to any specifics, there are no cost and low cost capability available on the internet to decode these transmissions. You won't need the permission of the APD to do this. Those that do will just do it and the APD will never be the wiser. And it won't take long for the bad guys, if there are any that use scanners to commit crimes, to put together a simple decoding package to monitor these encrypted (sic) transmissions. This is just another waste of federal money (even if it was seized money) in the post 9/11 era.

So what is the APD truly hiding from the public? Most agencies around here that use voice inversion only turn it on when they are passing sensitive info (vacation checks, want and warrants, SWAT and other sensitive ops). This idea that the bad guys are sitting around next to their scanners tracking the movements of APD officers to avoid arrest is just plain stupid and shows that the police chief there is not the sharpest blade in the drawer. There is no way that you can get that much intell from monitoring their dispatch channel to use it effectively to avoid the law. Criminals aren't that smart or they wouldn't be criminals!

I challenge the APD chief to show documentation in his files where criminals used scanners to avoid arrest. Oh yea, if they avoided arrest, listening to the scanner really didn't help them now did it. What local radio shop made this suggestion to the APD in order to make a buck? Bottom line: The citizens of Athens should demand that the APD should be investigated for fraud, waste and abuse. As pointed out in the article, this system was purchased with federal funds. This is NOT an interoperable system as the article clearly points out. So why was this department allowed to purchase a non-P25 system in this post 9/11 age with federal money?

Hello,
My name is Jeremy Belk. I wrote the article you guys are talking about. I'll be the first one to admit I don't know much about radio stuff.
Someone from this group emailed me and appreciate the communications as this very well could turn into another story. I would love any information you all can offer me on this. if what they are using is that easy to descramble point me in the right direction and I'll call them out on it.

Anyway, thanks for talking about my story. Hopefully, I will make another one out of this. Any input would be greatly appreciated.

2779. RE: [chattradio] ...question about Railroads-Mainlines

Yahoo group: chattradio
Date: 2006-10-05 19:34:09 UTC
From: Jonathan Guy
Topic: 2778 Message: 2779

I'll split this into two messages, since it's a bit long winded.

First let's look at the Class 1, or Mainlines that traverse Hamilton County.

CSX Railroad:

Nashville-Chattanooga (Chattanooga Sub)
Enters Hamilton County at Wauhatchie (Tiftonia) where the CSX Wauhatchie Yard is located.

Chattanooga-Atlanta (W&A Sub)
Continues south from Wauhatchie yard, around Lookout Mtn, under I-24 (Central Av.), through E. Chattanooga, wraps around to parallel Airport Rd. and enters Georgia in Graysville.
http://www.scanchattanooga.com/rail/csxt.php

Norfolk Southern:

Chattanooga-Birmingham (Alabama Division)
From Debutts Yard south (just off Holtzclaw), under I-24 (same spot as CSX), to Lookout Mtn Tunnel, to Tiftonia, and on south crossing into GA. This line parallels US11 once south of the TN/GA state line.

Chattanooga-Cincinnati (CNOT&P)
From Debutts Yard north, across Ten Bridge (next to the Chickamauga Dam), through Soddy Daisy and on north. Roughly parallels US27.

Chattanooga-Atlanta (Georgia Division)
From Debutts Yard, crosses Bonny Oaks, passes the Tennessee Valley Railroad Museum, on out and under I-75 near the Collegedale exit then the line splits at Little Debbie Parkway. Heading south on the GA Division through Varnell, GA and on through Dalton to points south.

Chattanooga-Knoxville (Kentucky Division)
This is the northern part of the split at Collegedale. The line heads north to Cleveland, TN and Knoxville.
http://www.scanchattanooga.com/rail/ns.php

The 'Road' channel found on the associated links will be trains on the mainline communicating with the dispatcher and other trains. 'PBX' channels are similar to an amateur radio auto-patch. 'Yard' channels are just that, used by crews in the yards while building trains.

Next message, Museums and Shortlines...

2780. RE: [chattradio] ...question about Railroads- Museums and Shortlines

Yahoo group: chattradio
Date: 2006-10-05 19:50:59 UTC
From: Jonathan Guy
Topic: 2778 Message: 2780

We'll continue with Museums and Shortlines

Matthew has the region covered in this link:
http://www.scanchattanooga.com/rail/shortlines.php

You can also visit my website for photos of many of the shortlines and museums in Middle/East Tennessee.
http://www.jguyphoto.com/ShortlineMuseum/TN/

Locally we have the Tennessee Valley Railroad Museum that operates both steam and diesel locomotives. TVRM operates their Missionary Ridge local from the Grand Junction station (Cromwell Rd.) to the East Chattanooga station/Robert M. Soule Shop complex in East Chattanooga. (N. Chamberlain Av.) Displays are available at both stations.

TVRM also operates passenger excursions to Summerville, GA this time of year. TVRM will also be running trips from Etowah, TN to the Loop and a few from Etowah all the way to Copperhill, TN. Visit http://www.tvrail.com for more information and trip schedules.

Our local shortines include the Chattooga & Chickamauga that operates the line from a connection with Norfolk Southern, paralleling Rossville Blvd. and running all the way to Summerville, GA. C&C operates a second line from a connection with Norfolk Southern in Alton Park south to Kensington, GA.

The Sequatchie Valley Railroad is our other local shortline and operates from South Pittsburg, TN south to Bridgeport, AL.

Most radio traffic from Museums or Shortlines will concern day to day operations. You'll hear everything from maintenance to train operation since they are usually only assigned one or sometimes two frequencies.

Probably more than you really wanted to know... :)

Jonathan

From: Robert
Topic: 2772 Message: 2782

Voice inversion works by taking the sound wave coming through the radio and cuts it in half, and the switches them, top on bottom and bottom on top. But, they are not cut in half exactly, you can use software on a computer to play around with a recording off of a scanner and find the cut point. Once this is known you can buy or buy a little gizmo that you plug into the auto out on your scanner. I believe that they are using a rolling code type of inversion. What a rolling code does it changes the cut point. I know of know way to keep up with this type of system, maybe some one else has some ideas.

2783. RE: [chattradio] Re: Athens police switch to unintelligible encrypted radios (DPA)

Yahoo group: chattradio
Date: 2006-10-06 16:00:49 UTC
From: Steven Bradley
Topic: 2772 Message: 2783

What is the APD Chief's call sign?

We need to spread the word to SHUN this ham radio operator and make him personally pay for what he has done. SHUN, i.e. have nothing to do with him, act like he does not exist, ignore him, do not invite him to activities or events, treat him as an unwanted stranger, make him as uninvited as possible. I hope he sees this message, because I want him to know why his decision will cost him personally when no one will have anything to do with him in his future amateur radio hobby activities. I.e. when he is on the air, do not respond or speak to him, leave him talking to himself. Make is life a living nightmare.

HAMs like him should be seen and not heard! We need amateur radio operators to keep the activity alive, but we do not need the likes of him in that number. It is those like him that gives the rest of us a bad name. Down in Florida you now are required to have an amateur radio license to even transport a scanner capable of police and fire frequencies in your car! I.e. down here, the license is now also a license to receive the police and fire calls in your vehicle. This will help increase the number of HAMs though, because the technician license is real easy and anyone wanting to recieve police/fire scanner in their vehicle should be able to pass the exam. Personally, I think we need one more license class, a receive-only scanner amateur radio license, in honor of the dumb politicians in Florida. This change took affect July 1st (I forget if it was this year or last year). The new class of license could have such questions as the frequencies of the VHF low, high and UHF public safety frequencies, the 800 Mhz band, the sections used for cell calls which you are not allowed to monitor and under what conditions you are allowed to listen to cell calls.

Now about this problem with the variable speech inversion. I am sure it is not rocket-science, therefore with a laptop to perform speech inversion descrambling, it should be possible to determine how it shifts and let the program make the shifts as well. Obviously if it is analog information being sent to the radios in the field, a laptop can also decode it and shift accordingly.

Lastly, if there is someone with a computer up there who can decode the transmissions AND place those transmissions in the clear on the internet for all to hear, I believe it would teach the Athens police department and their chief a lesson he will not soon forget. Is he an elected official? Hmmm.

Steven

As I understand the law, it is illegal to intentionally decrypt an encrypted radio signal. I don't think it would be wise to place an intentionally decrypted signal on the internet to prove you are flagrantly violating the law.

I believe the law refers to digital encryption, not the analog swapping of frequencies, it was done to help the marketing of Motorola encrypted technology. At the very least, if someone can make the computer software to unscramble it and make it widely distributed (i.e. for free on the internet), it would make their efforts mute and show a waste of taxpayers money. There is no law that prevents giving away software that unscrambles.

Personally, if the Chief is into amateur radio substantially, a complete shunning of him by everyone may get the message across. ALL HAM's should begin shunning him, anyone know his call sign, i.e. which one to avoid speaking to on the radio? Leave him talking to himself.

Steven

From: Richey Goldberg
Topic: 2772 Message: 2787

Oh good grief. I don't think that the police or anyone else for that matter cares about someone with a scanner when they choose a two way system. The time is coming where we will lost most of the public safety we listen to. This is in the distant future, but it will eventually happen. In 5, 10, or 20 years, your guess is good as mine.

Scanning is similar to the TVRO hobby. As time has gone on there is almost no analog C/ku band stuff to watch. If you didn't get an MPG2 or 4DTV receiver you are pretty much left in the dark. Even at that many up linkers have encrypted their signals to prevent hobbyist from watching free TV.

Richey - KI4KGR

We need to spread the word to SHUN this ham radio operator and make him personally pay for what he has done. SHUN, i.e. have nothing to do with him, act like he does not exist, ignore him, do not invite him to activities or events, treat him as an unwanted stranger, make him as uninvited as possible. I hope he sees this message, because I want him to know why his decision will cost him personally when no one will have anything to do with him in his future amateur radio hobby activities. I.e. when he is on the air, do not respond or speak to him, leave him talking to himself. Make is life a living nightmare.

HAMs like him should be seen and not heard! We need amateur radio operators to keep the activity alive, but we do not need the likes of him in that number. It is those like him that gives the rest of us a bad name. Down in Florida you now are required to have an amateur radio license to even transport a scanner capable of police and fire frequencies in your car! I.e. down here, the license is now also a license to receive the police and fire calls in your vehicle. This will help increase the number of HAMs though, because the technician license is real easy and anyone wanting to recieve police/fire scanner in their vehicle should be able to pass the exam. Personally, I think we need one more license class, a receive-only scanner amateur radio license, in honor of the dumb politicians in Florida.

This change took affect July 1st (I forget if it was this year or last year). The new class of license could have such questions as the frequencies of the VHF low, high and UHF public safety frequencies, the 800 Mhz band, the sections used for cell calls which you are not allowed to monitor and under what conditions you are allowed to listen to cell calls.

Now about this problem with the variable speech inversion. I am sure it is not rocket-science, therefore with a laptop to perform speech inversion descrambling, it should be possible to determine how it shifts and let the program make the shifts as well. Obviously if it is analog information being sent to the radios in the field, a laptop can also decode it and shift accordingly.

Lastly, if there is someone with a computer up there who can decode the transmissions AND place those transmissions in the clear on the internet for all to hear, I believe it would teach the Athens police department and their chief a lesson he will not soon forget. Is he an elected official? Hmmm.

Steven

2788. RE: [chattradio] Re: Athens police switch to unintelligible encrypted radios (DPA)

Yahoo group: chattradio
Date: 2006-10-08 01:26:53 UTC
From: Steven Bradley
Topic: 2772 Message: 2788

Richey, my point is since the chief of Athens PD appears to think this is such a great idea, if we make it a personal sacrifice for him by no one having anything to do with him as a result of his poor decision, he may indeed reconsider. If other HAMs were to tell him they would no longer associate with him due to the speech inversion scrambling he supports, he may have a change of decision, but it takes making him an island to make this work.

As for TVRO, I know someone with a FTA (free to air) digital receiver and the code to receive all of the latest DISH Network programming, and I mean ALL. When they change the code, the box automatically determines new code and program resumes. I personally saw this as recent as last night. All it cost him was the one time fee for the receiver. It does indeed use their latest technology to do the decoding and it does work, he can receive everything they have to offer for $0.

Oh good grief. I don't think that the police or anyone else for that matter

cares about someone with a scanner when they choose a two way system. The

time is coming where we will lost most of the public safety we listen to.

This is in the distant future, but it will eventually happen. In 5, 10, or

20 years, your guess is good as mine.

Scanning is similar to the TVRO hobby. As time has gone on there is almost

no analog C/ku band stuff to watch. If you didn't get an MPG2 or 4DTV

receiver you are pretty much left in the dark. Even at that many up linkers

have encrypted their signals to prevent hobbyist from watching free TV.

2791. Re: Athens police switch to unintelligible encrypted radios (DPA)

Yahoo group: chattradio
Date: 2006-10-09 03:07:33 UTC
From: j_multer
Topic: 2772 Message: 2791

I was disappointed to read the comments regarding this thread from one forum member after Jeremy from the newspaper asked for some information and help.

Jeremy - I apologize for that member.

Hams are not a vindictive group who turn against those who might not agree with them (such as law enforcement officials).

And, I think most hams will take the time to do a little research before commenting about things they have little understanding of ... such as the Electronic Communications Privacy Act, the changes that the Florida legislature made to its state laws covering scanners in motor vehicles, and just what analog voice scrambling is.

As the person who originally contacted you, Jeremy, I also apologize for not responding to your e-mail reply sooner. I have been working almost around-the-clock the past few days. Hopefully, my comments here may provide you more direction, as well as give some of the more knowledgeable and technologically-versatile members of this forum an opportunity to comment, correct or clarify.

http://www.midians.com/pdf/midian-catalog.pdf#search=%22AOR%20analog%20scrambling%22

The above link connects to the current Midian Electronics catalog. This company sells modulation and signaling accessories geared toward the two-way mobile radio market, and their catalog has some decent information describing the various types of voice scrambling.

Note that there are several types of voice scrambling, each with a different level of security from monitoring by unintended listeners. Some of the simpler voice scrambling mode may be decoded by items such as a stand-along Ramsey decoder -

http://www.ramseyelectronics.com/downloads/catalog/Rmz2006W-7.pdf#search=%22Ramsey%20Scrambling%20Decoders%22

- or by optional accessories available for some consumer scanners, such as the AOR AR5000 or Alinco DJ-X2000.

It needs to be noted that the scrambling accessories for those scanners are not generally available in the U.S. ... U.S. dealers only sell the items for government use or export purchase.

For some, public safety is not the only target for decoding voice scrambling. The cost for adding scrambling to a radio product has dropped enough to include it in some cordless phones, Family Radio

Service radios, and radios made for business band communications.

http://www.radioreference.com/forums/showthread.php?t=13070

The link above covers a thread about analog scrambling on the Radio Reference website. The "tetrascanner" link in the discussion no longer works, but the second page of the thread includes a schematic of an inversion decoder, and one poster's results when using a Ramsey decoder to decode various analog scrambling devices.

Although I have read comments about using Digital Signal Processing to decode analog scrambling, I have - so far - been unable to find any programs available on the Web for that purpose ... and written on the "hobby" level.

I believe there is some software that takes advantage of a duplex-mode sound card in a PC. Anyone familiar with the same ?

http://www.kb9ukd.com/digital/F1-EU-1-Voice-Inversion.wav

For those not familiar with analog voice scrambling, here's one wav. file sample from Gary Hahn's great collection of digital mode samples.

I figured it out. The machine needs a tone now. I thought maybe it was going deaf so I tried it with my IC207 and got in on all powers. Then I realized my 207 has a 107.2 tone and my VX7 does not. I added in the tone on my VX7 and all is good.

Did I miss an anouncement about this on the any of the local nets? Remember 146.79 will be down tomorrow for repairs tomorrow.

Date: 2006-10-16 13:27:30 UTC
From: randyap.geo
Topic: 2796 Message: 2796

Does anyone have the frequency(s) for Cleveland Speedway? I looked around scanchattanooga.com and did not find anything listed.

It looks like quite a few of the ground crew members wear radio headsets. Also, they are to implement one-way control to car communication next year.

2798. Re: Cleveland Speedway

Yahoo group: chattradio
Date: 2006-10-17 03:18:21 UTC
From: Richard L. Elliston
Topic: 2796 Message: 2798

I've monitored just about everything that can be heard in Bradley
County, but I've never had any particular interest in racing
communications. Consequently, I don't know the answer to your
question. Here's how I would approach the problem. First, get the
exact street address of the Speedway. Obviously it's South Lee
Highway, but you'll need the exact number. Check the phone book. Once
you've got this info., go to http://170.142.31.248/
Using the street address, you can get the name of the land owner.
Chances are the owner of the land is actually the operator of Cleveland
Speedway. Once you've got the name of the owner, go to the FCC
database at http://svartifoss2.fcc.gov/reports/index.cfm
If the operator has an FCC license, you should find it there.
ith respect to the individual race car opeartors, I doubt that you'll
find anything they use is more sophisticated that Family Radio or GMRS.

Thanks for your suggestions. The property lookup site is a great site.
I've been using it already for a while.

At any rate, I did a pretty thorough search of the FCC database and
did not find any licenses for the Speedway, or anything that looked
even like a remote possiblity. I'm starting to think that they may be
using FRS; it certianly would cover their site adequately. I will
take a FRS radio the next time I go and see if I can figure out
anything.

I know that the Bradley Co SO used to utilize their Uniformed Reserve Division at the track every weekend that there was racing going on to help keep the peace (they were needed quite frequently, hehe, in the pits). Of course the BCSO used their own simplex freq for their own communications, but the speedway communications itself I think used to use some of the (blue, green, red dot, etc) VHF business frequencies, but if I am not mistaken they finally switched to GMRS or FRS. If you don't find them on the FRS freqs than definately check out the VHF business freqs. I know that one of the BCSO guys used to act as a liason between the speedway staff and the deputies. Good luck....Rusty

Looks like the RS Pro96 scanner was tailormade for this situation. Preprogrammed search band 2 includes FRS, GMRS and MURS (colored dot) frequencies. Based on Rusty's info., it appears that there may be an amicable relationship between county law enforcement (perhaps the previous administration) and the speedway management. If this is the case, consider returning to the FCC database and making a list of the Eaves frequencies.

2803. New Weather Feed

Yahoo group: chattradio
Date: 2006-10-21 23:24:11 UTC
From: John Payne
Topic: 2803 Message: 2803

Good Saturday Evening !

Just wanted to pass along a New Weather Feed to everyone in the
Group from Western North Carolina

Macon County Emergency Managment has located 3 New Live Weather Fee
throughout the County. The Main Live Weather Station is located on
top of the EM & EMS building Down Town Franklin, NC.

The Second Feed is Located on top of the EMS Station in Highlands, NC

and the Third feed is on the Nantahala ,NC EMS station.

Here is the Link to the site !

http://www.maconnc.org/weather/

The Weather Site gives you up todate Weather Watches and Warnings.
Live Eastern US Radar. There is a radio box at the top of the page .
Just click on the Location you wish to view wather and hit go.

The Nantahala Station is not up yet but will be soon.

Check out the site when you have time !

Keep on Scanning

John Payne

There is a weather service that has local service I found. Try
Ambient,LLC and Wundergroung.com. I loaded it and there is someone
who has a weather station giving data within 2 blocks of my house.
There are lots of other listings offered to load into your data. It
is a freeby or signup service. The station I use KTNCHATT7 and I hope
to meet this person some day to thank him for this forethought.

2808. Re: Athens police switch to unintelligible encrypted radios (DPA)

Yahoo group: chattradio
Date: 2006-10-18 01:47:01 UTC
From: Gary Oakes
Topic: 2772 Message: 2808

Guess he did not hear about the time a couple years back when two middle Tennessee police officers were shot during a bank hold up. Only PD dispatch could hear their calls for help. Feds, SO and surrounding law enforcement, even though very close, had to go through the dispatchers and phone calls to determine the location and response. Both survived and returned to duty but the delay in interagency comms delayed the response.

The police chief, a seasoned veteran of law enforcement, made the decision to remove encryption from everyday transmissions reserving them for sensitive ops and smartly began using MDT's for traffic that probably does not need to be in the air.

Hopefully this will not be repeated in Athens. And I don't even go by Athens but about every 3-4 years.

So if you want to complain, use logic and facts.

>> Apparently, the Bradley County Regional Communications District has bought out Jon Eaves' radio operations, including his repeater site on top of Oswald Dome in Polk County, along with his sizeable VHF and UHF license holdings - including a SmarTrunk II trunking system on VHF.

Jon Eaves has licenses and sites in several counties, although the article only mentions the one site. Is Mr. Eaves eliminating a redundant site, or leaving the SMR business ? Could he be in the same type of negotiations with the other counties ?

Unless the article failed to mention it, Bradley County is taking some risk if they are undertaking this venture without getting the deal reviewed by the F.C.C.

Mr. Eaves has the conventional VHF frequencies licensed as a commercial SMR (IK), and the trunked system frequencies licensed as YG. Most of the frequencies are taken from the industrial / business pool.

Although public safety can operate on channels or a system licensed as IK or YG - if the licensee (SMR) meets specific requirements - a public safety entity typically cannot have a license in these station classes.

Bradley County may have to prove other frequencies - available for public safety as the primary user - were not available.

If they want to maintain the trunking system, they may have to certify that they have enough radios to meet the minimum load requirements (I'm thinking the minimum for a five output frequency system, as this appears to be, is 1,000 radios).

Finally, since most of the frequencies involved are from the business pool, Bradley County may be granted use of the frequencies on a secondary basis ... which would mean they might have to tolerate any "legal" interference created by other properly maintained and operated stations on the same frequencies.

All this may be moot concern on my part if Tennessee allows local governments to create public corporations, and fund them with tax dollars.

They do. Look at EPB Telecom. They get to use government money, tax breaks,
and other perks to compete with private/public companies.

2832. Data on 453.650

Yahoo group: chattradio
Date: 2006-12-06 17:51:59 UTC
From: Matthew Sadler
Topic: 2832 Message: 2832

Was searching around this afternoon in the UHF band and have been hearing regular data bursts going through a repeater on 453.650 MHz.

This is licensed to the City of Chattanooga and was one of the repeaters that was "abandoned" when everyone moved to 800 MHz. I recall seeing articles a few months back that Chattanooga Police and Hamilton County EMS were both preparing to install AVL in their vehicles - wonder if this is what I'm hearing?

You won't find any IDs, either. The system is a SmarTrunk II system, and there are no scanners that can follow this type of trunking. No software, either.

That said, the system is much more active in the summer than in the winter. Jon was leasing out radios to most of the rafting companies during the season. As I recall from around 2001, the VHF stuff was trunked, the UHF stuff was leased dedicated conventional repeaters (single user per repeater).

2836. Catoosa County, GA - 800 MHz

Yahoo group: chattradio
Date: 2006-12-24 01:24:40 UTC
From: Matthew Sadler
Topic: 2836 Message: 2836

Well, Catoosa County inches closer to its move to 800 MHz. An application has just been filed for a 5-channel system on Taylor's Ridge on these frequencies:

866.4125
866.6250
866.9000
867.4125
868.4125

The current guess is that the Catoosa County radios will be able to roam between the main simulcast system and the Taylor's Ridge site to provide county-wide coverage. It remains to be seen which system would need to be monitored to hear all of the traffic. Also remains to be seen how the dispatchers will be linked in to the system.

A few answers, but many questions remain.

2839. CPD BOLO - December 25th, 2006

Yahoo group: chattradio
Date: 2006-12-25 05:34:26 UTC
From: p25digital
Topic: 2839 Message: 2839

Heard approx. 00:30hrs

All units stand by to copy:

Be on the Lookout for a Red Sled, vehicle is wanted in connection of a 413 Hit-and-Run involving an elderly female walking home last evening.

The same suspect vehicle and occupants are also wanted for questioning in several 424's since midnight. Parties have been entering the residences from the roof, possibly through the chimney.

One suspect is believed to be about 6' 6", 350lbs, in his late sixties with a long white beard and wearing a Red & White cap, jacket and pants with black boots. May be in the company of several shorter accomplices wearing Green & Gold work uniforms.

Suspects last seen driving a red sled with black trim and white interior. Possible registration of S-A-N-T-A-1. Registration comes back to a Kringle party, negative 438. Last known address of #25 Christmas Avenue, North Pole.

Any contact, stop and hold for this agency and NORAD in relation to reported Air Space Violations, USE EXTREME CAUTION ☐ Subject is considered a flight risk and may be 411 with an open Egg Nog container in the vehicle.

Ref: Santo BOLO

I personally had the pleasure of composing the "Santa BOLO" for numerous years as a dispatcher for Hamilton Co. Sheriff's Dept., and one my last year at Chatt. Police Dept. in communications. I then, at the pre-chosen time, dispatch the long waited BOLO.
Putting out the dispatch was enjoyable enough, but when officers called in telling me how they watched the faces of their children when they heard the BOLO. There were also numerous times when strangers would call in and ask to speak to the dispatcher who aired the broadcast. They would thank me and tell me about the smile that was still showing on their children's faces.
It is a long lived tradition, and one I hope will survive for years to come..
Merry Christmas to all on chattradio and have a Happy New Year!
Jim Hamilton

I've seen the one at the Krystal. It's frequently parked adjacent to Keith Street at the shopping center next to the Krystal. I think they probably have an office in the shopping center.
To try to answer your question, these guys are supposed to be licensed by the Tennessee Dearment of Commerce and Insurance.
Go to http://licsrch.state.tn.us/Default.aspx
and select Security Companies. For your search criteria, enter Cleveland, without specifying a name or address. You'll be surprised how many have licnese problems (expired, etc.) Once you have the legal name of the company, go to the FCC database to look for the radio license.

You can't legally use amateur radio equipment without a license. Unless you're going to obtain a license - and learn how to program and operate the handhelds, amateur equipment might not be your best bet in an emergency.

I would suggest the following:

1 - A good cell phone that has GPS capability. I think all the newer phones are required to have this feature. Make sure the phone is charged up before each excursion. Program the 7-digit public safety phone numbers for the N.F. in your phone ... in the mountains, dialing "9-1-1" may connect you with a distant or unintended comm center.

When possible, you always want to talk directly to the agency coming to your assistance. We all know how misinformation can occur when too many people have to "pass" a message.

2 - Both you and your dad should take a first aid course, so you can properly address broken bones and injuries in the field until help can be obtained. Contact your local Red Cross chapter.

3 - Obtain and learn how to read a map of the area you will ride in. They should be available from the Forest Service office.

4 - Get a handheld GPS ... to use in conjunction with the map - in case you accidentally get off your intended route, or have to deviate because of an emergency.

5 - Take some extra layers of clothes, snacks and water in the jeep. Although the days can be warm, the temperature can drop below freezing at night.

6 - Let someone know where you will be, and what time you will be back. If your plans change, such as stopping somewhere for a meal after riding, let them know of the change.

If it is that desolate you may wish to invest in a PLB (Personal Locator Beacon). These units can be manually activated and are picked up by the USCG system. I would get one of the latest devices which includes your personal identifier and gps coordinates in the distress beacon. Of course having a ham radio is another plus as I believe in redundancy when I am in a secluded area such as this.
Doc/W4EMS

From the National Park Service:
Big Bend National Park (TX)
Stranded Hiker Uses PLB To Summon Help

On the evening of December 30th, the U.S. Air Force notified the park that a personal locator beacon (PLB) signal had been received from a backcountry location within the park. Rangers headed to a backcountry campsite about six miles from the coordinates given by the PLB and found a vehicle registered to a visitor who had a solo hiker permit for that zone of the park. Two rangers then hiked to the approximate PLB coordinates, but were unable to find anyone in that area. They were joined by another team of searchers and a Texas Department of Public Safety (DPS) helicopter the following morning. The crew of the helicopter homed in on the 121.5 MHz distress transmission from the PLB within minutes of arriving on scene and soon spotted the hiker, who was waving a space blanket at them.

2850. Catoosa County Joins Hamilton Countys' Communication System

Yahoo group: chattradio
Date: 2007-01-05 04:29:48 UTC
From: chasenlayne
Topic: 2850 Message: 2850

http://www.newschannel9.com/onset?id=8679&template=article.html&dateformat=%M+%e,%Y

January 4,2007
In an effort to provide better communications for all public safety workers in Catoosa County Georgia, officials are spending $1.5-million for new state-of-the-art equipment to join Chattanoogas' regional system.

Sheriff Phil Summers has been working on the project for about two years and has now secured funding and legal agreements to make it all work.

Summers said the county is using SPLOST funds to make payments that will be spread out over a few years.

Currently Catoosa County sheriff, fire and emergency medical services use an aging VHF system in the 150Mhz range. Summers has said the system only provides coverage in about 60% of the county with portable radios. He said the Chattanooga-Hamilton County 800Mhz system already provides that level of service in Catoosa County with four towers.

Summers said deputies and firefighters have encountered many situations where they could not transmit with their current radios, which could put their lives in danger.

Catoosa County is building it's own 800Mhz tower on Taylors' Ridge a few miles south of Ringgold that will be tied into the Chattanooga system. Summers said that tower will work in conjunction with the Chattanooga towers to provide at least 90% coverage. He added it will also fill gaps in coverage for Hamilton County users in the southern end of that county.

In the summer of 2005 the Chattanooga-Hamilton County 800Mhz communications system got a nearly $4-million upgrade. It allows the use of digital transmissions and is now capable of adding other counties to the system.

Catoosa County is spending $1.2-million for the new tower and transmitters, along with digital Motorola radios. Another $300,000 is being spent to upgrade aging dispatch consoles.

Catoosa will be the first public safety agency to use digital transmissions on the Chattanooga-Hamilton County system. Currently all agencies use analog technology, which can sound scratchy in areas where reception is poor because of terrain. With digital, radio transmissions are static free and clear.

Summers said when his deputies and other county emergency workers use the digital radios they will have a much higher level of safety and efficiency. The system will also allow the future installation of laptop computers in vehicles that can be used for dispatching, report writing and tapping into crime information networks from the field.

The Catoosa County upgrades will also allow their emergency workers to communicate with those in Hamilton County. Summers said his department works very closely with East Ridge Police and the Hamilton County Sheriff's Department.

Firefighters in Catoosa also regulary respond with those in Hamilton County and East Ridge, and the system is expected to improve mutual aid operations.

Fort Oglethorpe Police and Fire Departments are also buying new digital radios for the upcoming system.

Summers said the new 800Mhz system should be on the air in the next couple months.

The move will mean people who use scanner radios to keep up with happenings in Catoosa County will have to buy more current and more expensive digital capable scanners.

In the area that you are wanting to cover, I would suggest that you get your ham license if you want RELIABLE communications. Anything else will be spotty at best. In the VHF/UHF realm the 147.180+ with a pl tone of 118.8 or the 442.250+ w/ same pl tone both of which cover most of that area really well. On up into the northern part of Tellico, I would suggest the Tellico repeater which I think is 147.315+ and a pl of 141.3 or the 442.550+ and I think it has the same pl tone. You also might try the 145.310- w/ 141.3 pl tone or the 147.060- w/ 141.3 pl tone. It's going to be very hard to beat VHF/UHF ham rigs (especially the high powered mobile rigs) in covering that area. For the mobile rig or a portable, I would suggest you getting a Larsen mobile antenna with some gain, such as the NMO 2/70 for the Jeep atleast or anything where you can have a good metal surface (ground plane) below the antenna. I am not sure what the mounting options would be on a dual sport bike
(although I'd love to have a dual sport bike myself). If nothing else, you could get a good telescopic antenna for the handheld radio and like someone else mentioned be sure to have a full charged battery, some means of connecting it to the vehicle power, or carry an extra battery pack with alkalines just in case. A good ammo can would accomodate everything that you need with the exception of the mobile antenna and would be accomodated by the bike pretty well I would assume. As far as cell phones go, Verizon has the best coverage by far in this area, by the way, but it's still lacking in most spots that you mentioned. Since you are out exploring the area, you may want to check out www.geocaching.com and check out the caches in the area if you have a GPS rig. It's a neat way to get to see some pretty territory and enjoy some off-road activity if you pick the right caches. Have a good time exploring the area...Rusty NE4ME

2852. Re: Catoosa joins Hamilton County

Yahoo group: chattradio
Date: 2007-01-05 14:37:58 UTC
From: Fred White
Topic: 2852 Message: 2852

Glad to hear Catoosa is joining The Chattanooga system.
Maybe they should check around before going Digital.
I spend time in W. Palm Beach Fl. and they went Digital
a few years back and included a few Cities South of WPB.
WPB used Digital for a short time and went back to Analog.
The cities south of WPB stayed with Digital and the quality
of the Digital is not nearly as clear as WPB's analog.
I understand this is the reason WPB changed back, including
all of Palm Beach County.
Among the cities that remained Digital are Delray Beach and
Riviera Beach. There are some strange background noises.
All Digital systems that I have heard have these noises.
Could this be the reason Chattanooga has remained Analog?
I hope Catoosa checks this out before going Digital.
Any response Pro or Con would be welcome.....Fred

FYI, LifeForce 3, a Bell 206L4 helicopter (commonly referred to as a "Long Ranger") has been delivered to Erlanger. They have been out flying around in their new toy today.

Unsure as to when it will enter service - it will be based out of Calhoun, GA - but there should be news coverage tonight, or at least in the next few days. Sounded like they were doing some press flights today. I heard for certain that they had some people from Channel 3 on board for one flight.

I'd recommend either the Uniden BCD396T, if you're looking for a handheld, or their BCD996T, if you're looking for a base/mobile unit. You will have to have something digital-capable, and the older digital scanners may not be compatible once rebanding takes place. Plus, the newer Uniden handheld has much better battery life than the original digital scanners.

As for the Radio Shack digital scanners, I've read many mixed reviews, but haven't hardly seen a bad comment about the Unidens.

An issue to ponder:

Article I, Section 10, Clause 3 of United States Constitution:

"No state shall, without the consent of congress, lay any duty of tonnage, keep troops, or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war unless actually invaded, or in such imminent danger as will not admit of delay."

Hamilton County is a political subdivision of the State of Tennessee. Catoosa County is a political subdivision of the State of Georgia. I don't recall reading anything about U.S. Congress having approved any agreements underlying this expansion of Hamilton County TRS.

That is true Hamilton County is a political subdivision of the State of Tennessee and Catoosa County is a political subdivision of the State of Georgia there for they are not States and are free from the restraints of the US Constitution Article1/Section 10, Counties and Cities are free to make contracts and Memorandums of Understanding with each other as far as the letter of the law is concerned. This is not the first case of this very thing happening, Augusta/Richmond County Gerogia uses the Palmetto System which is part of the State of South Carolina.

From: radioscanner4fun
Topic: 2861 Message: 2867

as to the Jan 24,2007 free press,
We are going to test device that bridges radio frequencies to make sure we can talk crossband among frequencies as to what the manufacturer says it can do. A large portion of the Homeland Security grants went to Hamilton County as where they have the use of an 800Mhz system. The money was used to upgrade from analog to digital service. To bridge the communications gap and allow emergency workers using 800Mhz radios to talk to people using VHF or UHF. The Homland Security Distric bought TWO vehicles and equipped them with the device being tested. One of the vehicles is strategically placed in McMinn County. The moblie vehicle devoted to INTEOPERABLE COMMUNICATIONS has all of the frequencies in it with all radio equiptment. They can take it anywhere in the 10 mcounty area. They can bridge the frequencies so the sheriffs in Hamilton and Bradley could talk to McMinn County.
That sorta sums it up as to the article in the paper. I just hadnt heard anything about it before this and then I missed the test because of work. I was just wanting to get some more info about what when where why and how.
I know when Bradley County received thier Homland Security grant and purchased the Mobile RV Command Post it was equipped with the 800Mhz system so they would be able to communicate with Chattanooga. Does anyone know as to what these vehicles are with these Bridge units in them? Thanks

>Does anyone know as to what these vehicles are with these Bridge units in them?

Recently while we were on the trail of all the interop problems in Florida thanks to their new statewide non-P25 trunking system (u gotta luv ProVoice), I heard the same thing about DHS providing the state with some sort of van to solve their interop problems. I beleieve I heard that from a newspaper reporter or read it online in conjunction with that story at the Orlando newspaper website. At the time it sounded like a crock and now I have one in my backyard. Unbelievable!

This sounds like some dumb DHS bureaucrat's idea of a great fix to a very nasty issue instead of making these agencies get true interop capability out of all the taxpayer funds we are spending to fix the issue. What happens to these vans when a big storm comes and turns them into toothpicks. Bottom line: they are as vunerable as any fixed site, maybe more so for a wide variety of reasons.

I will see if I can find that Florida ref again, but I am out of the office for the rest of the week thanks to weather.

2870. Re: Interoperability Channels

Yahoo group: chattradio

From: radioscanner4fun
Topic: 2861 Message: 2870

A layman's guide
to Interoperability

You've been hearing a lot about Interoperability lately. Most of us never heard of the word until 9/11 when a series of events at the World Trade Center triggered an awareness of some basic problems that had been around for a long time. Most of our newly appointed folks in Homeland Security identified a need to people to talk to each other in the event of a mass disaster and the word Interoperability became commonplace. We agree that Interoperability generally translates into more effective communications but with some clear distinctions as follows:

Phase One Interoperability is the function of detecting people or things that can cause us harm and to convey that information to those who can react properly. Prior to 9/11 the CIA, the FBI, and a double handful of covert agencies simply did not share information. That is the essential task of the Department of Homeland Security - to get the information flowing. We are not involved in this phase except in a minor role of providing radiation detection and reporting equipment. We'll come back to this a little later.

Phase Two Interoperability is the function of federal emergency response agencies coordinating their efforts to better administer resources effectively. This involves FEMA, Citizens Corps, Department of Transportation, Federal law enforcement agencies at all levels, the FAA, Port and maritime authorities, and others responsible for movement of large numbers of people in the event of a major emergency. We have little involvement in this phase with the possible exception of several programs such as Operation SafeWatch, to enhance the federally funded CERT and Citizens Corps programs.

Phase Three Interoperability is perhaps the most difficult of all from the viewpoint of effective administration. Phase Three involves the coordination of federal, state, county, and local law enforcement agencies, most of whom have a basic distrust of the others. Add to that the need to communicate and coordinate with fire and rescue personnel where there has previously been no commonality of interest or common objective. Then you add volunteer fire and rescue agencies who have a long standing rivalry with paid departments. Finish it up by adding emergency healthcare personnel, traffic administration, and wrecker services. Then tell them they all need to communicate and work together. To say that this was, is, and will continue to be a difficult task is a mild understatement to say the least. This, by the way, is the area

where we are most involved.

Since Phase Three is where we are most involved, we will start there and come back to the other phases later. At the federal level, and to some extent at the state level of Homeland Security, it was recognized that there were all kinds of systems used to communicate by the various agencies and most of them were incompatible. In most areas of the USA, there exists a need to provide a means of interconnecting differing types of communications systems. The device designed to provide a solution is known as an Interoperable Bridge or Switch. There are essentially four qualified providers of this equipment - JPS/Raytheon, Infinimode, Telex, and VDV Media. The most common requirements aside from normal in-band communications (VHF to VHF etc.) are as follows:

VHF to UHF conventional radios using a common bandwidth standard (Normally 12.5 KHz)

VHF or UHF radios to Low Band (30-50 - MHz), 220, 700, or 800 MHz conventional radios

VHF or UHF conventional radios to 800 MHz trunked radio system

VHF, UHF, or 800 MHz radios to Nextel or SouthernLINC public network communicators

VHF, UHF or 800 MHz radios to Air Rescue support radios (130 MHz AM)

VHF, UHF, or 800 MHz radios to Marine radio channels (160 MHz) in areas near waterways

VHF, UHF, or 800 MHz radios to wired telephones

Any of the above configurations connected to local 911 and EMA facilities

Any of the above configurations connected via the Internet, microwave network, or leased phone lines
to allow control of widely disbursed operating facilities

Homeland Security planners were faced with providing a solution to these needs as quickly as possible and attempted to use a one size fits all equipment strategy. As it turns out, this approach is open to improvement by selecting the technology to fit individual requirements rather than assuming Coosa County Alabama has the same needs as New York City. We will come back to Phase Three shortly, but we should also note an additional need which we call Phase four.

Phase Four Interoperability, or lack thereof, is equal in importance to the aforementioned. Phase Four deals with providing effective communications within buildings. Many of the lives that were lost on 9/11 were lost as a result of ineffective in-building communications. Cities across the USA are rewriting building codes

to incorporate provisions for assuring in-building communications capability for first responders. We are involved in Phase Four to the extent that we offer custom solutions through Motorola and Kaval utilizing Bi-Directional Amplifiers (BDA's), specialized antennas, and power radiating transmission cable. Since each situation is different, offering a catalog of products isn't practical on this service. If you have a requirement for enhanced in-building communications, give us a call at 1-800-489-2611. Now, let's go back to Phase Three, the one most of us understand as the most common application of Interoperability.

Radio Interoperability - An Overview - The most common application for Interoperability is one of allowing VHF users to communicate with UHF users. There are all kinds of solutions ranging from the illegal operation of amateur radio transceivers capable of dual mode operation on up to misapplied application of one size fits all Interoperable bridges costing thousands of dollars. If you simply want a cost effective and efficient VHF to UHF solution, your least expensive alternative is a system called RadioNexus.

An Introduction to RadioNexus - Basically, RadioNexus consists of a VHF and a UHF radio that are connected via a CAT-5 cable that allows the VHF radio to activate the UHF transmitter and to hear UHF received signals and vice versa. The RadioNexus system can be set up at a dispatch center, at a remote location, or in a vehicle. The radios can be programmed on the regular dispatch frequencies so that all VHF calls are heard by UHF users and vice versa. This is not recommended. A better alternative is to set up your normal dispatch frequencies in the RadioNexus system utilizing a separate CTCSS to restrict access unless users switch to the Bridge Channel. This requires adding an additional channel position in your handheld or mobile radios - normally not a problem with today's radios with multiple channel being basically standard.

>> Where can a person search for more info about this bridging?

If you mean equipment information, the JPS / Raytheon switch seems to be the most-popular choice for bridging channels / talkgroups in my area of the Carolinas. They have some interesting product information on their site:

www.jps.com

Keep in mind that this type of equipment is only as effective as the training - and staffing available - to put it into use when needed.

For instance, I'm familiar with a eastern N.C. county that has equipment in-place, but the staffing schedule doesn't always provide for someone on duty who can set a bridge up.

As an indication of what bridging can do, Charlotte-Mecklenberg County (N.C.) is in the process of building out their interoperability into surrounding counties, allowing dispatchers in Charlotte OR at the surrounding counties' dispatch centers to patch pre-designated talkgroups and channels together.

For instance, if a plane crash in the region occurred, each county providing a response could patch their appropriate channel or talkgroup together, so "command" can talk to all units responding. All it takes is a few button pushes on a dispatch console in ANY single county participating.

The networking between the counties will eventually look like a spider's web, using both microwave and T-1 lines, with redundancy. The system can also be connected to the statewide Viper network, providing communications with L-E, fire, EMS and Emer Management throughout the state.

Yahoo group: chattradio
Date: 2007-04-01 21:38:43 UTC
From: Richard L. Elliston
Topic: 2878 Message: 2878

Anbody else having problems acquiring signal in this area?
I'm using an XACT XTR7, been having problems with constantly acquiring signal for about a week. Called tech support. Concluded that my radio had probably failed, should buy replacement. Asked him if they would mind reprogramming, since problems seemed to start with most recent channel update. At this point, he acknowledged that they are updating one of their satellites, and I should wait until after Tuesday to buy a new radio.

2879. Re: [chattradio] SIRIUS problem

If I were you, I would comply and wait until Tuesday. I have several Sirius receivers and for about a week now, I experienced problems with my reception. It seems that it works flawlessly when I'm complete of all obstacles. In other words, open sky. Now that you've made it known that one of the satellites are being updated, that will explain the coverage limitations. So if I were you, I would wait until Sirius provides you with a better explanation on any additional flaws in coverage.

Hey Guy's

I just read your post and since no one has mentioned it would give you all the low down on what is realy going on ! On the SIRUS Website they have an updated story that would have thought that you all would have read. The Big Two XM & SIRIUS is changing over to the new French Satalite that was launched Sunday.

It was due to be launched sometime last week but with major weather problems over europe they had to delay the launch. The New XMSAFJ-1000 is the most powerful broadcasting Satalite ever. The Upgrades will take place toady and be up and running by tomorrow.

But your current radio's are not going to be anygood come Tuesday Morining at 8am.

The Big Two have come up with a Massive new system to put in our cars and homes , but man they are shafting us with the price tag.

$2,500 is the bottom rung on pricing and it go's up from there.
So don't freak out when you get an email from your satalite radio provider tomorrow telling you nothing you have will work and you all need to buy and new radio.

and sice you are undercontract there is no way out of paying for the service even if you don't get a new radio !

Man they know how to makes life rough for us all !

Sorry to post the bad news

John Payne

2884. Re: SIRIUS problem

Yahoo group: chattradio
Date: 2007-04-03 04:00:26 UTC
From: Richard L. Elliston
Topic: 2878 Message: 2884

Problem cleared up around midnight. I now suspect that they updated/reprogrammed my receivers in response to my call, but they just don't want to get into the habit of doing this upon customer request.

--- In chattradio@yahoogroups.com, "Wadie E. Suttles III" <suttles1972@...> wrote:
>
> If I were you, I would comply and wait until Tuesday. I have several Sirius receivers and for about a week now, I experienced problems with my reception. It seems that it works flawlessly when I'm complete of all obstacles. In other words, open sky. Now that you've made it known that one of the satellites are being updated, that will explain the coverage limitations. So if I were you, I would wait until Sirius provides you with a better explanation on any additional flaws in coverage.

2885. Takgroup 24240 Hamilton County system

Yahoo group: chattradio
Date: 2007-04-03 22:43:40 UTC
From: jim knight
Topic: 2885 Message: 2885

I heard a brief conversation on this talkgroup the other day - not enough to get any idea who it is. Does anyone have info on it?

2886. Talkgroup 24240 further information

Yahoo group: chattradio
Date: 2007-04-05 16:46:03 UTC
From: jim knight
Topic: 2886 Message: 2886

Today I heard a short conversation about going back to the firehouse. So 24240 belongs to one of the fire departments but I don't know which one yet.

2887. Re: [chattradio] Talkgroup 24240 further information

Yahoo group: chattradio
Date: 2007-04-05 22:17:55 UTC
From: Matthew Sadler
Topic: 2886 Message: 2887

Jim,

I suspect this is either Catoosa County or Fort Oglethorpe fire departments based on some snippets I've heard. They have reportedly received a few of their radios already.

Hey guy's
I have been listening steady for a few days.
You are right about Catoosa and Ft.Oglethorpe. They have
been combined (so to speak) Ft Ogelthorpe police are now dispatched
from Sheriff's Department. Same goes for both Fire dept.'s
I have heard Fire on 24240 and Sheriff on 24280. The Call (car) numbers
are consistant with County numbers.
From what I have heard they mostly are, How do you copy? Where are
you now? Apparently just testing for quality and distance.
I can hardly hear them from lower end of County. They are fairly good
in North end.....Guess they don't have the new tower at Wood station
in operation yet. I haven't heard anything from Dispatchers yet.
Just car to car. possibly handhelds as they talk from their homes
sometimes at night. ....Fred

2894. Compact fluorescent lamps

Yahoo group: chattradio
Date: 2007-05-28 20:47:52 UTC
From: Matthew Sadler
Topic: 2894 Message: 2894

Found this somewhat interesting and thought I'd pass it along... we bought a house last week and figured to save on both electricity and keep the temperature inside down, we'd buy some compact fluorescent lamps (aka CFLs) and replace a bunch of standard bulbs.

They work fine; but they have this note on the packaging that caught my attention:

"This product complies with Part 18 of the FCC Rules but may cause interference to radios, televisions, wireless telephones, and remote controls. Avoid placing this product near these devices. If interference occurs, move product away from the device or plug either into a different outlet. Do not install this product near maritime safety equipment or other critical navigation or communication equipment operating between 0.45 – 30 MHz. Use only on 120V 60 hertz circuits."

From: John Payne
Topic: 2894 Message: 2896

Funny you should mention this ! My wife and I replaced all of our incandescent light bulbs with 100 lums CFL;s. They are equal in brightness to 100wt. bulbs in all of our outlets.

But now my Scanner (radio shack pro-2017) is catching birdies like crazy. I have to keep the squelch turned almost all the way over!

But it never really give the bulbs any thought till you sent the post in !

Dose anyone think it could be the trace amount of mercury in these bulbs that my cause this ?

Keep on Scanning

John Payne

I don't think it's anything peculiar to the mercury, just that the bulb generates RF in the process of ionizing the gas to produce UV light which then causes the white powder to fluoresce. Have you tried turning off all your lights to see if the birdies go away?

My personal experience doesn't show any added noticeable interference. I have four of the CFLs, plus a desk lamp with a pair of regular fluorescent tubes. Most of my interference likely comes from the computers, anyway.

2900. Changes, they are a comin' ...

Yahoo group: chattradio
Date: 2007-06-27 06:23:46 UTC
From: Matthew Sadler
Topic: 2900 Message: 2900

A few news items, and notes on an upcoming change to ScanChattanooga.Com:

* WDOD-AM 1310's center tower, the tallest of the three, collapsed Sunday evening during severe weather. This tower is at least 65 years old. The station is back on the air using a longwire antenna. Pictures of the destroyed tower are online in the ScanChattanooga gallery, at http://www.scanchattanooga.com/gallery/wdodam .

* Catoosa County should be online in the near future on the Chattanooga/Hamilton County 800 MHz system. Some regular operations for Fort Oglethorpe Fire have been noted on talkgroups 24240, 24304, and 24336 (I've noted 24304 as Fireground 10, and 24336 as Fireground 11). 24240 appears to be the main channel. Also have been hearing the Fort Oglethorpe police dispatcher simulcasting on talkgroup 24432.

* Air Evac Lifeteam (helicopter air medical service) in Crossville, TN uses 153.260 MHz with DPL 051.

Now, upcoming changes to ScanChattanooga.Com:

Sometime in July, ScanChattanooga's look and design will make a fairly significant change, and I think it'll be for the better. While I personally like the current design, it doesn't lend itself to easy maintenance or updating of the site, and I just don't have the time I used to for site maintenance. Consequently, I've been researching some different content management systems and a few wiki products.

I've settled on DokuWiki and have had an install running on my test server here at the house, and thus far have been very happy with it. Pages load fast, even on the slow, decrepit hardware I'm using for the test box, it's not database-driven (a plus IMHO, easier to maintain and backup) - instead, it uses text files, and maintaining pages is a breeze.

I'm not sure when I'll make the cut over to the wiki. Like I said earlier, sometime in July. Just depends on when I get the software installed and configured on the server, everything reformatted into the wiki, and how busy I am outside of work. I don't expect to have to take the site completely offline to make these changes. With the changes will come a number of updates, the ability to use an RSS reader to see any changes made, and I'm planning a few new features that I'm sure will be appreciated by everyone.

Your comments, questions, and suggestions are, as always, welcome.

RE: the collapsed tower.
I would guess it's not a location where local zoning folks would
allow them to erect a tower today. Reckon they'll grandfather it to
let them rebuild?

History?

I seem to remember that, prior to being located here, WDOD's antenna was on the roof of the Patten Hotel. Maybe two towers with a longwire between?

RE: the collapsed tower.
I would guess it's not a location where local zoning folks would allow them to erect a tower today. Reckon they'll grandfather it to let them rebuild?

2905. APCO P25 questions

Yahoo group: chattradio
Date: 2007-07-06 16:46:47 UTC
From: jim knight
Topic: 2905 Message: 2905

I am considering when I might want to buy a scanner capable of receiving APCO 25 transmissions and I have two questions for the group:

1. Is there any definite information on when any Hamilton County users will start using APCO 25 on a regular basis on the trunked system?

2. Aside from the trunked system, what other APCO 25 transmissions, if any, are regularly monitorable in the area?

As of right now, I only occasionally hear a "noise burst" on the trunked system, and am not aware of any other APCO 25 stuff around here. This makes me tend to be completely satisfied with my BC246. If I find out that I am missing out on anything significant, it might change my mind.

Those responses only mention TWRA specifically. Is that all there is in the area? And I am still wondering if anyone has any idea whether APCO 25 will become common on the Hamilton county system within the next year or not.

Hey Jim
Not sure about your area in and around Chattanooga. But Living in Far Western North Carolina we have began to see some Frequencies changed over from analog to Trunking APCO-25. One which you may be able to receive it the Great Smoky Mountains National Park

I have listened to the park for years from there main repeater off of Clingman Dome that's over 6000ft. But recently they have changed over to the APCO-25 and I have lost all but just a few Ch's.

Also the VIPER System in NC http://www.radioreference.com/modules.php?name=RR&sid=4087

Will be on APCO-25. You may pick up transmissions from Cherokee County , Clay County and Graham County from there transmission sites.

So if you get a new trunking scanner you may want to try these frequencies out

Keep on Scanning

Great Smoky Mountains National Park

Frequency Input Type Tone CH Description Mode
167.15000 166.35000 RM 173.8 PL 1/2 Parkwide (Linked to 169.55, 173.8 PL on input) FM

There are way too many non-digital capable radios
on the system for them to go digital.There are
still the old Spectra's and Maxtrac's still being
used in the fire trucks.

TWRA and TVA Police are the only one's I know
that are Digital.

As far as I know, TWRA is still the only digital system in the area. With respect to the other systems, here's a hint. Budget year for most gov't entities begins July 1. If anybody is planning to spend the bucks required for a changeover to digital, it should show on the face of the budget. It's public info., possibly can be found online.

2911. New digital talkgroup

Yahoo group: chattradio
Date: 2007-07-11 17:12:49 UTC
From: Matthew Sadler
Topic: 2911 Message: 2911

New talkgroup on the Chattanooga system, 33040, in digital mode. Not sure who it is but at this point I'm leaning towards the possibility of it being Hamilton County Schools. Remember that First Student lost the contract and I've seen one or two buses out and about from Durham which got the transportation contract. Maybe they took this opportunity to get rid of the VHF schools repeater?

I talked to a person who works with a person who talked to a person
that is in the know (yeah, just a FEW people in this chain) who said,
yes, this is Hamilton County Schools transportation.

If you've got digital capability and want to test it out, it'll be
really busy come August.

Caught some "testing 1,2,3" in digital around noon today, sounded good. Nice
to see some P-25 users on the system.

MMc.

2914. Brewer Radio playing musical chairs

Yahoo group: chattradio
Date: 2007-07-16 18:50:37 UTC
From: Matthew Sadler
Topic: 2914 Message: 2914

I think I'd seen something on here about WALV maybe moving, but did a little more research and Brewer is trying to move not only WALV, but also WMPZ and WHJK more into Chattanooga and away from the fringe areas...

WMPZ:
- change community of license to Harrison, TN (ha!)
- change frequency to 93.5 MHz
- transmitter site move to Montlake Mountain (co-located with WSMC-FM 90.5)
- power change to 0.91 kW, directional

WHJK:
- change community of license to Ooltewah, TN
- transmitter site move to Rossville (co-located with WRXR-FM 105.5 and WAWL-FM 91.5)
- power change to 11.0 kW, non-directional

WALV:
- change community of license to Lakesite, TN
- change frequency to 105.1 MHz
- transmitter site move to Montlake Mountain (co-located with WSMC-FM 90.5)
- power change to 0.85 kW, non-directional

WHJK would certainly (if this all goes through) put a good signal into all of Chattanooga, and the other two would have a good signal as well. I'd assume they plan to keep the 93.3 translator on Missionary Ridge.

Format changes? Who knows... the FCC doesn't care about that!

Can you tell me what stations these are/were?I
don't know call signs,but know
frequencies/station names(like Kiss FM or
105.5,etc.)Thanks.

Jordan.

WALV is currently 104.9 Dayton "Alive 105"
WMPZ is currently 93.7 Ringgold "Groove 93"
WHJK is currently 95.3 Cleveland "Jack FM"

Thanks Matthew.Does anyone have any idea why KISS
FM(98.1) changed to country?I heard it was
because more people liked classic country.I know
they made allot of people very angry when they
did that.This is why I love my satellite radio.

Thanks.

Jordan.

From: Richard L. Elliston
Topic: 2918 Message: 2919

Answer to your question involves issues of legality and practicality. Since federal law prohibits unscrambling, nobody's gonna come forward and tell you how to do it. If they did, moderator would probably be well-advised to remove their response. Bottom line is that you gotta do your own research, weigh the risk, make you own decisions here. Controlling issue is probably the practicality. I live in an area where there is good reception of the APD signal. During the several years that it was not scrambled, I never heard anything worth listening to, and eventually locked it out. Anything of any significance happens within Athens city limits, you're gonna hear about it on McMinn PD (155.7). That's not scrambled, and as a matter of political necessity, it ain't gonna be. McMinn has more than its share of incorporated municipalities -- Etowah, Englewood, Calhoun, etc. Even though some or all of them have their own frequencies now, their folks have gotta be able to communicate with McMinn. No way McMinn is ever gonna force the expense of encryption on them, and even if they could, the constables (a MIGHTY political force) would declare war.

Hello, all! Does anyone know the frequencies used by the local dirt tracks around Chattanooga for the Raceceivers that they use? I have been going to Boyds Speedway and Cleveland Speedway and thought I might tap in.:)

Thanks,
David

2922. Big Store Fun with Scanner

Yahoo group: chattradio
Date: 2007-08-11 18:14:52 UTC
From: Richard L. Elliston
Topic: 2922 Message: 2922

Here's the situation: It's the weekend, and your spouse, or significant other, wants you to go along to that huge department store (no need to mention the name) for a "few minutes" (3 hrs., minimum) to shop. Now, we all know they don't have Pop Comm or MT in the magazines, so how do you pass the time? Take along the handheld scanner. Tune to the store frequency, usually 154.570, 154.600, or 151.625 mHz. Turn volume as high as you can without damaging speaker. Clip it on your belt. If, by chance, you have no belt clip, carry it around in one hand, upside down, antenna pointing to floor. Depending upon your attire, it will only be a few minutes before some unsuspecting customer mistakes you for an employee ("associate"), and asks where to find some hidden item of merchandise. Here's where the fun begins. Send them across the store to the outside garden center for toilet paper! OR "Sorry, we're all out, you'll need to go across the street to K-Mart." OR Best reaction seems to come from an unconcerned, "I don't know." Use you imagination here! Now, let's suppose you get lucky and an "associate" inquires about the radio. Answer: "Well, I'll tell you the truth. I'm a union organizer, sent here covertly to observe working conditions." Wait a few minutes, and leave. Stroll around parking lot, and watch as plainclothes security folks scramble to write down your license plate number!

From: Richey
Topic: 2922 Message: 2923

People assume that someone with a radio is someone who is in a position of authority. I've got radio that looks exactly like what the PD and FDs around here carry. About 10 years ago when my dad was in the hospital I would get bored at night and decide to go exploring in the hospital. As long as I had a radio in my hand and I walked like I knew where I was going no one questioned me. I have had employees at stores threaten to take away radios because I could hear "their" frequency to which I usually offer to turn them into the FCC for using FRS radios in their Business.

I would advise caution and discretion. The last thing any of us wants is to have the stores get paranoid and suspicious about anyone with a radio on their belt, possibly even to the point of banning them from the store. Personally, if I have my scanner with me, I keep the volume at a low level, or use an earphone. I may or may not lock it on the store frequency. Just my opinion but after the fiasco of the EPCA a few years ago, the scanning hobby does not need any more negative publicity.

I have often suspected that for many businesses, the appearance of open radio communications is a well-calculated public relations decision. Best example is Cracker Barrel. Surely they could afford the licensing and more sophisticated equipment than FRS/GMRS. Obviously they know that many interstate travelers carry these radios. Leaves the hurried traveler with the impression that they are striving to get them seated and served as quickly as possible.

Jim,
I agree with you fully. My post was intended to get a chuckle or two and to get a conversation started. Most folks welcome an opportunity to laugh at that big store. Had been about two weeks since anybody posted anything. I join you wholeheartedly in advocating the responsible use of scanners.

Topic: 2922 Message: 2927

No problem. I confess that I have had temptations to do similar things. Of course if you REALLY want to mess with the store (quite illegally, I must note), a Motorola Spirit radio or modified ham HT can be programmed for most of the popular frequencies and the correct PL tone. Say no more - I am NOT recommending or condoning doing that! I like having the freedom to use my radios legally and will not jeopardize it for a few minutes of "fun".

2928. Another P25 talkgroup?

Yahoo group: chattradio
Date: 2007-08-13 19:54:29 UTC
From: Matthew Sadler
Topic: 2928 Message: 2928

Appears 33072 may also be a Hamilton County Schools transportation
talkgroup - maybe they got two channels?

Jim, there have been many posts on other groups about Wal-Mart and Sam's Club getting bent out of shape at people using MURS radios in the stores. Up to two christmas's ago, Sam's and Wally world used to sell the same radios they use Motorola XTN's. I love walking around the local store with my ham ht or scanner, I have had people walk up to me and ask where something was, even though, I didn't have the "official" blue vest on. It does bug the employees. Unfortunately, half the comms are in different languages than english. It is worth a laugh to hear some of the stuff, of course, when security is on to some thing, the volume goes down and ear plug goes in. Mall security is easy for me to copy at the Mall of Georgia, I live abt 5 miles away and they are on a repeater. Weekends give plenty of fun listening.
L8ter,
Larry

I have been an ER nurse for 15+ years. I resently joined a volunteer fire department. Took the first responder class. And I am fixing to start the advenced emt-iv class. BUT, I want a radio or pager so I can hear how things are on the other side. I am used to getting the calls in the ER, not hearing the being dispatched etc. How can I do this?

Heck I really don;t care if they know I am listening or not. They're license is public domain and if they are unlicensed, shame, shame. Never gorget the time I first got a BC-246 and was beta testing it. Drove over the Franklin NC and stopped in the KFC for lunch. Forgot I had the Close Call on and when the little gal working the drive thru window keyed up her pack, the feedback could be heard all over that KFC. What a hoot. I explained to the young lady that anyone could hear her so be careful what she says. She blushed, I smiled and ate my chicken.

Have run all over the stores in CHA Hamilton Place in CC and had some fun there. I have no fear that they will be upset. What will they do, scramble? ;--)))

73, Have fun and good hunting,

2934. New to all this

Yahoo group: chattradio
Date: 2007-08-17 03:44:58 UTC
From: ginnlyn
Topic: 2934 Message: 2934

Hey. I am a nurse and am thinking of getting into either EMS, FireFighting, or searcha and rescue; something more exciting than I am doing now. I worked in the ER at Erlanger for 15 years, now a have a "management" job which at 33 is really good. But I miss the "good" stuff. I wanted to get a radio to hear calls. I have a lot of friends in EMS, VFD, etc. and I wanted to hear some things before I decide what I want to do when I grow up. Any suggestions? Any ideas? How do I get a radio? Where? etc. Thanks.

Topic: 2934 Message: 2935

These days what radio you get is going to depend on how much you want to spend. As of TODAY, in my opinion, the best radio for the Chattanooga/Hamilton County area is the Uniden BC246T. It will cost you a little over $200 and it offers many excellent features. It's very flexible and you can set it up to monitor the action that interests you and ignore all the "other stuff" that goes on in the county radio system.

Here are the two biggest drawbacks of the BC246T:
1. It can be daunting and time consuming for a person unfamiliar with scanners to get it set up. You can overcome this drawback by buying some computer software to help. That will cost you somewhere around $30. If you happen to buy ARC246 from www.butel.nl, I could send you my setup file and you could load the scanner with all the Hamilton County talkgroups in a few minutes.
2. The other big drawback is that the BC246T will not receive digital signals. At present there is very little digital stuff on the Hamilton County system, and none that I know of in the area of public safety or EMS. But in the future there will probably be more. So if you are looking to get a scanner that will continue to be useful once digital signals become more common, you will have to spend significantly more money. A Uniden BC396T (handheld) or BC996T (base station) will cost about $525 but will receive the digital signals. Radio Shack also has scanners that will handle digital signals, and they cost about the same as the Uniden models.

A new scanner, not even available yet, is the GRE PSR-500. The advance info on it promises it to be easier to program and use than the Uniden and Radio Shack models, but it won't be available until October. The price will probably be similar to the digital Uniden and Radio Shack models. Personally I am going to wait and read reviews of this one before deciding whether it or one of the other models will be my next scanner.

I hope this gives you some better information on what's available. For further assistance you can ask specific questions on this group, or I would recommend Grove Enterprises. They are located in North Carolina and one of their top guys, Larry Van Horn, reads and posts to this group. Their number for technical assistance is (828)837-2216.

From: Fred White
Topic: 2936 Message: 2936

Phil Summers, Sheriff of Catoosa County, announced tonight:
The Sheriff's Dept. will switch to 800 Meg. next Monday morning
at 7:00 A.M. (Labor day) The Fire & Rescue will follow in 2 or 3
weeks. All radios are ready but F & R needs more training before
switching. No mention if Digital or Analog. He stated that
North West part of County will be received by Lookout Mtn. tower
while North East part will receive from Chattnooga's new Tower near
Hamilton Place Mall (I didn't know there was a Tower there).
The South end of County will use the new Tower on Taylors Ridge
South of Ringgold .... Fred

2938. Antenna Coax

Yahoo group: chattradio
Date: 2007-09-03 05:25:00 UTC
From: radioscanner4fun
Topic: 2938 Message: 2938

I am using an external anetenna at home and would like to find the best receiving coax to use. I will need approx 75ft. I dont the difference between 50 and 75 ohm. And what happens if I should use a splitter and accomidate 2 to 4 other scanners off the same antenna? Does it reduce the signal strength enough to worry about. I like to listen to Chatt and Hamilton cnty.
Also I am not sure if I have heard some Scrambeled communication on Bradley Rescue frequency. I have just heard it a few times and was woundering if they maybe expeirmenting with scrambeled communication like Athens. Which I havent been able to figure why they would do that. The public is good eyes and ears for the public safety group. I would like to know how that has effected athens when they dont have the public calling info they see and hear. MmmMMM just sumthing I was thinking about. Maybe nothing to anyone else.....

Bradley County Fire/Rescue uses kenwood radios and those radios have a built in scrambler.

i dont know if they actually use it for a purpose or if they accidentally turn it on and don't realize it.

Cleveland PD has Transcrypt scamblers as an add in board inside the radio. It uses rolling code voice inversion. I've also heard rolling code voice inversion on the Rescue frequency. I wonder if the radio gives some sort of acknowledgment that the scrambler is on or off. I think BCSO also has inversion boards installed in a few of their portables.

Topic: 2938 Message: 2941

Stu, BCSO does not use kenwood's. We use only the best, motorola. Some of our radios have DES encryption capabilities, however most of the guys don't understand how to keep the key from being deleted on those older units and most dont even know what encryption is. but with the mix of syntor's, CDM's and Maxtracs, its difficult to use encryption alot.

2942. Re: Antenna Coax

Yahoo group: chattradio
Date: 2007-09-03 21:09:04 UTC
From: whitstu2000
Topic: 2938 Message: 2942

Well at least one agency has enough sense to stay with Motorola. But, I was stating that Transcrypt offers boards that plug into some Motorola radios. Not that I would use them, I'd rather stay Securenet. I thought BCSO had some inversion boards like that in some radios. Of course the voice inversion is not near secure as Securenet.

--- In chattradio@yahoogroups.com, Rusty Bryant <rustyb78@...> wrote:
>
> Stu, BCSO does not use kenwood's. We use only the best, motorola. Some of our radios have DES encryption capabilities, however most of the guys don't understand how to keep the key from being deleted on those older units and most dont even know what encryption is. but with the mix of syntor's, CDM's and Maxtracs, its difficult to use encryption alot.

2944. Re: Antenna Coax

Yahoo group: chattradio
Date: 2007-09-04 17:16:26 UTC
From: ae4bk
Topic: 2938 Message: 2944

BCF&R does not run scramble. What you are hearing Is Athen's PD's audio. It's a combination of 2 or more frequencies mixing. Athens PD's repeater output mixes with atleast 1 other signal and it comes through the input of the BCF&R repeater and of course it spits it out just as it hears it. That repeater uses a 100 Hz pl tone (most common around) so it tends to get unintentional interference from many sources since it is so high in elevation too. Similar things happen to every other gov't repeater that I am aware of that runs a 100 Hz pl tone. I have tried to persuade some people responsible for those repeaters to switch to another PL tone, or better yet to DCS or DPL with no luck. The argument against it is they don't want to reprogram hundreds of mobile and portable radios to accomodate the change. Any other agency that would want on any of their freqs would also have to reprogram their radios too (potential interoperability issue). That's the problem with running the most common PL tone of 100 Hz. Everyone can get on your repeater.....and they do..intentionally and unintentionally.

From: radioscanner4fun
Topic: 2938 Message: 2945

Ok does BCFire & Rescue use all kenwood in the trucks? Mmmm I see
said the blind man... What does Cleveland PD use? And thanks for the
info back on the scramble info bleeding through from Athens.
Now back to the coax, Can I use 75 ohm tv cable to connect to
receivers? I hate to go buy this other stuff when I have some of this
laying around. But if its not worth it I may have to.

From: Rusty Bryant
Topic: 2946 Message: 2946

Patriot Day, 2007

A Proclamation by the President of the United States of America

White House News

September 11, 2001, was a defining moment in American history. On that terrible day, our Nation saw the face of evil as 19 men barbarously attacked us and wantonly murdered people of many races, nationalities, and creeds. On Patriot Day, we remember the innocent victims, and we pay tribute to the valiant firefighters, police officers, emergency personnel, and ordinary citizens who risked their lives so others might live.

After the attacks on 9/11, America resolved that we would go on the offense against our enemies, and we would not distinguish between the terrorists and those who harbor and support them. All Americans honor the selfless men and women of our Armed Forces, the dedicated members of our public safety, law enforcement, and intelligence communities, and the thousands of others who work hard each day to protect our country, secure our liberty, and prevent future attacks.

The spirit of our people is the source of America's strength, and 6 years ago, Americans came to the aid of neighbors in need. On Patriot Day, we pray for those who died and for their families. We volunteer to help others and demonstrate the continuing compassion of our citizens. On this solemn occasion, we rededicate ourselves to laying the foundation of peace with confidence in our mission and our free way of life.

By a joint resolution approved December 18, 2001 (Public Law 107-89), the Congress has designated September 11 of each year as "Patriot Day."

NOW, THEREFORE, I, GEORGE W. BUSH, President of the United States of America, do hereby proclaim September 11, 2007, as Patriot Day. I call upon the Governors of the United States and the Commonwealth of Puerto Rico, as well as appropriate officials of all units of government, to direct that the flag be flown at half-staff on Patriot Day. I also call upon the people of the United States to observe Patriot Day with appropriate ceremonies, activities, and remembrance services, to display the flag at half-staff from their homes on that day, and to observe a moment of silence beginning at 8:46 a.m. eastern daylight time to honor the innocent Americans and people from around the world who lost their lives as a result of the terrorist attacks of September 11, 2001.

IN WITNESS WHEREOF, I have hereunto set my hand this fourth day of September, in the year of our Lord two thousand seven, and of the Independence of the United States of America the two hundred and thirty-second.

GEORGE W. BUSH

2947. Chattanooga trunked system

Yahoo group: chattradio
Date: 2007-09-15 19:50:37 UTC
From: davidtn26
Topic: 2947 Message: 2947

Hello all, I am just getting back into listening to my Pro-95. I mainly enjoy listening to police and the fire department. Years ago I had no trouble and always heard plenty of things happening. Recently while trying to listen to CPD, I have not been getting much traffic at all.

I noticed on scanchattanooga.com that there are 5 additional frequencies that are listed for the ringgold zone. Do I need to program these frequencies in as well? Could this be my problem?

Also, I noticed it says there are newer digital XTS radios. Does this mean that I won't be able to pickup those transmissions? I thought the only people using digital was TWRA?

Thanks for any help!

The whole CTS is digital compatible and will be
digital at some point.The school buses and TDOT
are digital on the system.TVA Police are also
digital,I think they are encypted too.I've heard
everything from last month to 3 years from now
for the entire CTS to be digital.

Jordan.

2949. Here is a shocker ...

Yahoo group: chattradio
Date: 2007-09-19 14:57:15 UTC
From: Mark McDougal
Topic: 2949 Message: 2949

FCC Releases New Rebanding Agreement Timelines (9/13)
The FCC released details on its new procedures to expedite the 800 MHz rebanding process. The guidelines establish new benchmarks for all the players and provide guidance to Sprint Nextel and the 800 MHz Transition Administrator (TA) to speed up cost review and approval.

All National Public Safety Planning Advisory Committee (NPSPAC) licensees with systems of up to 5,000 subscriber units must complete planning and submit a cost estimate within 90 days of TA approval of a planning funding agreement (PFA). NPSPAC licensees with 5,001 - 10,000 units must complete planning and submit a cost estimate within 100 days, and NPSPAC licensees with more than 10,000 units have 110 days.

NPSPAC licensees in Waves 1 - 3 that are already engaged in planning must complete planning and submit a cost estimate to Sprint by Oct. 15 for Wave 1, Nov. 15 for Wave 2, and Dec. 15 for Wave 3. "We discourage licensees from requesting extensions of time for planning that assert arguments on behalf of Sprint," FCC officials said in a public notice. "Requests for extension based on delay caused by Sprint will not be routinely granted."

Factors that will be considered in evaluating a request for more time include system size and complexity, degree of interoperability with other systems, and level of effort required to prepare a reasonable cost estimate, the notice said.

Following completion of planning and submission of a cost estimate to Sprint by a licensee, parties have 30 days to negotiate a frequency relocation agreement (FRA). If the parties are unable to negotiate an FRA within 30 days, the parties shall participate in mediation for 20 days. The TA shall refer any remaining disputed issues to the FCC within 10 days of the close of the mediation period, during which time the parties will complete the briefing of such issues.

The FCC also provided more clarification on the change notice process.

2950. Pro 258 Triple Trunking Scanner

Yahoo group: chattradio
Date: 2007-10-14 16:02:25 UTC
From: sdtnvol42
Topic: 2950 Message: 2950

I just purchased a Radio Shack Triple Trunking Scanner.
I have programed the radio with conventional frequencies with about
300 local channels including the Ham radio channels.

My problem is I have never owned a Trunking Scanner. On Scan
Chattanooga I see the talk Groups and the Id's.

The radio in programming the trunking is asking me for the type system

E-2-800 or E2-900, E2-Hi, e2-uhf, E1, ED, Ed-SCT, LT, ???????

When I go to the trunking section of Scan Chattanooga it shows the
talk groups like Adam Dispatch 16432.

Do you enter 16432 into the trunking section?

If someone can give me some tips I would appreciate it.

All I have ever owned is the conventional entry like 856.2125

I have that capabibility with this radio but someone told me it is
better to have the Trunking type for the Chattanooga system.

2951. PRO 528

From: Fred White
Topic: 2951 Message: 2951

I think you need to refer to your instruction manual
and program the 20 Chattanooga frequencies in and be sure
put it in MO (Motorola) mode. That should work for you.
You must follow the instructions carefully.
Find the freq's at ScanChattanooga.

E-2-800 is the correct choice for the type system.
You enter the 16432, etc. in the ID banks. Refer to the manual for how to enter ID's into banks. You can also enter a name for each ID so that the name will be displayed when the ID is active.

Another hint -- if you're really into mobile internet access, you might want to look into Verizon's WWAN. Nifty little gadget plugs into USB port, works just about anywhere. Sure beats looking for WIFI. I know the $59.99 monthly unlimited access is hefty. Best kept secret is that there are substantial employee discounts, depending on where you work. They won't offer -- you gotta ask. Example: State employees get 19% discount, but, again, only if you ask.

2960. PSR-500 first impressions

Yahoo group: chattradio
Date: 2007-10-23 00:23:19 UTC
From: jim knight
Topic: 2960 Message: 2960

Brown Santa brought my new PSR-500 today!
I set up a search range in the VHF federal band and after a few minutes it stopped on 169.55 MHz, with a P25 Network Access Code (NAC) displayed! So my first intercept on the new scanner was a digital signal. The audio was choppy at first, like a bad cell phone call, but it straightened out quickly. It still sounded a little rough but was perfectly understandable.
My records show this freq as Great Smoky Mountains National Park. If anyone has better information, please let me know.
Then I programmed in a wildcard talkgroup for the Chattanooga/Hamilton TRS and immediately started receiving all the traffic. Lots of work ahead entering names for all the talkgroups and organizing them into scan lists.
The one disappointment is that the "demo application" that comes with the scanner is just that - it allows PC control of the radio, and saving the contents of memory to a binary file, or loading memory from a binary file. But there is no provision for importing data from an ASCII file. Too bad - if I had that I could load all the data from my BC246 and save hours of manual programming.
Anyway, my first impression from a couple of hours of playing with it is excellent!

>anyone has better information, please let me know.

Absolutely correct Jim. It is one of the GSM NP freqs. BTW for the list the NAC is 293. Per my GRE-500. I have been testing this unit for sometime now. My full review for those who are interested is in the Nov 2007 MT.

You can read more about the GSM freqs in a Nov 2006 post I madeto my personal monitoring post blog at:

http://monitor-post.blogspot.com/2006/11/new-great-smoky-mountain-np-repeater.html

Hope you enjoy the GRE-500 Jim as much as I have. Nice piece of hardware for PS monitoring.

Subject: [chattradio] Pro 258 Triple Trunking Scanner

I just purchased a Radio Shack Triple Trunking Scanner.
I have programed the radio with conventional frequencies with about
300 local channels including the Ham radio channels.

My problem is I have never owned a Trunking Scanner. On Scan
Chattanooga I see the talk Groups and the Id's.

The radio in programming the trunking is asking me for the type system

E-2-800 or E2-900, E2-Hi, e2-uhf, E1, ED, Ed-SCT, LT, ???????

When I go to the trunking section of Scan Chattanooga it shows the
talk groups like Adam Dispatch 16432.

Do you enter 16432 into the trunking section?

If someone can give me some tips I would appreciate it.

All I have ever owned is the conventional entry like 856.2125

I have that capabibility with this radio but someone told me it is
better to have the Trunking type for the Chattanooga system.

Thanks Larry! While I have your attention, do you know if it is possible
to change the step size for a LMIT search object? I noticed that the
default step size for the military aircraft band is 6.125 KHz whereas 25
or maybe 12.5 would be more appropriate. I didn't see this capability in
the manual.

2964. Chattanooga 2 Meter Ham Frequencies

Yahoo group: chattradio
Date: 2007-11-04 15:55:46 UTC
From: sdtnvol42
Topic: 2964 Message: 2964

Does anyone know if the 146.610 repeater is working or changed tones?

I havent had a radio in a few months and just bought a used one at the Chatt Ham Fest.

Does anyone have a list of (DEAD) Non-working Local 2 meter repeaters?

My repeater guide is from 2006. Thanks

KG4TOS

Topic: 2964 Message: 2966

The ARRL has a pretty good list at www.arrl.org/hamfests.html.
You can search by state or by a radius around your zip code. Most of the area hamfests will be listed there, although some of the smaller ones such as Prater's Mill may not be. It lists the ones that someone bothers to request to be listed there. The next one reasonably close is in Rockwood on Nov. 17.

2967. 407.775

Yahoo group: chattradio
Date: 2007-11-12 21:47:13 UTC
From: jim knight
Topic: 2967 Message: 2967

Has anyone with a digital scanner successfully monitored 407.775? I have this in my records as a Postal Inspector frequency. I put it in my PSR-500 and it sounds like the scanner is trying to demodulate a voice but it winds up being just random syllables. This being my first experience with a digital scanner, I don't know whether the signal is encrypted or the scanner isn't getting a good enough signal, or what. I would appreciate knowing whether anyone with a Uniden digital scanner has been able to monitor this freq.

2968. COKE

Yahoo group: chattradio
Date: 2007-11-13 19:16:43 UTC
From: radioscanner4fun
Topic: 2968 Message: 2968

I was searching for the cleveland coke plant. I found one on the fcc data base that was issued to them and Doc communications which has been terminated for a couple of years now. I can not find anything new. I have a uniden 396 and can not pick up anything on close call feature either. Does anyone have updates on this? It is also listed as coka cola enterprise and johnston coka cola bottling company. From what I have heard from a friend is that they may have 2 freqs. The day to day operations is on one and maint is on another. The way he described the attennas was a short stuby....

I had come to the same conclusion. The PSR-500 doesn't have an indicator for an encrypted signal, but it just gives you garbled audio. It does display the P25 network access code.

2971. New talkgroups

Yahoo group: chattradio
Date: 2007-12-08 22:23:53 UTC
From: jim knight
Topic: 2971 Message: 2971

I have heard these new (to me) talkgroups in the last few days:
33072 TDOT
33104 Catoosa County sheriff
I got tentative ID's from the traffic, and radioreference.com confirms them.
Both talkgroups are P25 digital.

2972. Re: [chattradio] New talkgroups

Yahoo group: chattradio
Date: 2007-12-08 22:43:45 UTC
From: Matthew Sadler
Topic: 2971 Message: 2972

As a follow-up, 33136 is Fort Oglethorpe Police main channel.

I was told that shortly after Catoosa's 800 went into service, all of the radios were subsequently recalled for some reason, some loaners were given out for a bit, and apparently they've got the originals back. Don't know the reason behind this, but possibly the radios that were put in service didn't have the P25 flash software so they couldn't do digital. That would explain the startup in analog mode.

For those who don't know, the current Motorola line of XTS (portables) and XTL (mobiles) radios for public safety support P25 digital operation, but don't necessarily come with that option enabled. All depends on how you order it and what you pay for it.

I thought I was loosing it too David so then I visited RadioReference.com and printed this area's data and there were no changes I needed to make.There is a statement of Ringgold site is on line and the Catoosa County talkgroups should be more active. This AM the Hamilton County was kind of quiet for Chattanooga. I had linked to my outside Ant.(a ground plane) There was some atmosphere conditions happening lately maybe that could effect the monitoring. My 11meter radio has been loading up full with the RF meter. I would like to find a 0-30meter rig to listen to the world in addition to the rest of this monitoring station.

I've been monitoring Catoosa County and Fort O both since they went to 800, and subsequently made the transition to digital. Traffic levels seem about like before.

Are you listening on the Ringgold site, or the main simulcast site? This may have something to do with it.

From: WHC
Topic: 2985 Message: 2985

It has been sometime since I've upgraded my scanner (currently have a BC785D which is now outdated) but when I get my tax refund I will upgrade to one of these scanners.

I need the help of you experienced people as I've never really understood this 'trunked' channels... When I first started, you had to buy crystals of the frequency you wanted (show my age, huh?) but now days the scanners come with 6000 channels (whew) and GPS capabilities.

What I like know, which scanner (BCD996T or POR-2096) would be best for a novice scanner listener?

Anyone have knowledge of the two?

Topic: 2985 Message: 2987

I own neither - I have a BCD396T, which is similar, but not identical, to the 996, but my personal opinion is that the Uniden is the better product. My personal experience is that Uniden's receiver itself seems much more sensitive, and the BuTeL software, combined with a subscription to RadioReference.com, will allow you to just download the information you need right in to your PC, then shoot it in to the scanner, making your initial programming a breeze.

And, your 785 isn't really outdated. I have a 780 which sees daily use for hours at a time. Just depends on what you want to listen to.

On another issue, now that I'm upgrading to a newer scanner (due in tomorrow), how many PD's or FD's encrypt their signals?

Reading some articles on the RadioReference.com, I'm seeing where there's quite a few doing that... Is my new scanner going to be worthless soon as they're all encrypting?

The Chattanooga system is capable of
encryption,but as far as I know,no one uses
it.Most radios are capable of it.The first
upgrade will be to digital and only 2 talk groups
are that.I wouldn't worry about encryption at the
moment.Thanks.

Sorry... I got so wrapped up reading the manual... I got the Bearcat BCD995T which was delivered just after lunchtime.

I was supprised that it's about the same size as my BCD785T that I have but is packed with A LOT more features. In todays time, REAL MEN don't read manuals but I'm having to dig into them to figure out how to operate it.

It can hold 500 Systems or 6000 individual channels which is more than I've ever had before. It can packed 'preprogrammed' with 500 system in the top 25 major cites but Chattanooga was one of them. <g> I backed those up using the BuTeL software, erased those and with ReadyReference.com account I put Hamilton Co which makes it very easy to get the latest local stations.

I bought it from ScannerMasters.com but they don't come cheap! I've been watching eBay, but there's not been enough savings to buy one there. Going through a known company has be be better.

I'm digging into the manual because as it scans, and shows Station ID in TEXT, I can see it also showing "Simulcast" flashing in the back?? I'm not sure what that is.

I'm also trying to find out how to set East Ridge PD to Priority... on my old scanner, setting that priority would cause any other trasmission to have an over ride to let that be the main channel to listen too... but I'm not sure I have that set right. I do have a tone to that channel to 'beep' when anything keys on that channel that lets me know it's ERPD without having to look up.

It's a nice scanner! Probably more than I really need, but I get those channels that I lost when the BCD785T couldn't receive them anymore. Thank goodness for Tax Refunds letting me splurge... <g>

From: WHC
Topic: 2993 Message: 2993

Matthew, do I see on your website (www.scanchattanooga.com) that you work for channel 9? I'm looking for some media frequencies and so far don't find any? I think I used to have some in my 785T but was looking to see if they were updated somewhere. Any suggestions?

Do you upload the freq's you have on your site to ReadyReference.com? I can attach to that site and pull down frequencies real easy! That's slick...

And of course, someone ALWAYS has good freq's that aren't posted anywhere... Anyone care to share?

Regards,
BC

Thanks for your feedback, Brent. I liked hearing reporters setup for a live shoot... Sometimes it was funny listening to them speaking freely, which they couldn't do on live TV... <g>

I was thinking, if you still used radios, I could sneak up to your van when you're on the Moore Road overpass, unscrew the antenna, then duct tape the doors then watch you have to crawl out a window to get out.... <g> just kidding...

I bet you have some funny stories to tell us like that, huh?? <sly grin>

From: Larry Wilson
Topic: 3000 Message: 3000

Courthouse broadcast

Radio system installed to bolster safety, security
Local News

Greg Moses

Staff Writer

A new emergency notification system at the McMinn County Courthouse has been instituted to enhance courthouse security.

Using a portable radios and a color-coded notification system, courthouse personnel who are members of the Courthouse Response Team (CRT) can react quickly to an emergency situation.

Assistant County Mayor Joe Guy, who is part of the CRT, said all offices in both the courthouse and the annex on Hill Street have one representative on the CRT and each office is also connected by the radio system. Every office always monitors the radios and in the courts, Guy said, and if an incident occurs in one location at either the courthouse or the annex, all locations will be notified.

"This ensures that everyone knows what's going on across the courthouse and the annex," Guy said.

Guy said a color-code system is used to notify other courthouse annex offices of incidents.

"There are four colors in the system," he said. "Whenever a color is called out on the radio, we all know what to do."

After a color is called out, 911 and court officers are notified and CRT, which serves as an initial responder, takes the appropriate action to deal with the incident.

"Every incident is unique in some way," Guy said. "In many ways, though, the response is the same, whether it's a critical incident, a fire or inclement weather, and we feel that this plan is adaptable in many ways."

In minor incidents, such as medical emergencies, Guy said the CRT would call for a court officer and an ambulance while making their way to the person needing medical attention.

For much larger incidents, such as severe weather or a critical safety threat, the CRT's reaction would depend on the circumstances.

Guy said in certain incidents, such as a fire, the CRT would assist with evacuating the courthouse or annex. However, Guy said in other incidents, evacuation would not be the proper course of action.

"We've found evacuation is not always the best response to an incident," he said. "Sometimes it's better to remain in a locked office until the threat is abated or a safe avenue of escape is attained. At any rate, citizens and courthouse personnel will be directed by the CRT to refuge, whether that means a safe exit or being placed in a secure area of the courthouse."

One week after the plan was initiated, Guy said the CRT reacted to its first incident.

"A citizen fell in the hallway, and the CRT responded very well to the situation," he said.

Although the courthouse has never had a major emergency or critical threat, Guy said having a plan is in the best interest of the courthouse employees and the general public.

"Any plan is better than no plan at all," he said.

Guy said the idea of having a plan was brought to the forefront after an officer was shot at the Roane County Courthouse in Kingston in 2006.

"Some of the judges organized a security training session at TWC later that year," he said. "Last year, whenever the gun was found in the restroom, we decided to concentrate harder on the plan. We used the training from 2006 to develop a plan that was easy to follow and applicable to a wide range of incidents."

Guy said the plan was developed as a team effort, with input from court officers, members of the judicial system, courthouse employees and the county mayor's office.

Guy said one of the best parts of the new emergency notification system is the cost to the local government.

"It didn't cost a penny to make the plan and purchase the portable radios," he said. "We received a state grant which completely covered the cost."

Guy said further security enhancements, including metal detectors for court officers and further training for courthouse personnel, would also be funded by a grant.

"We plan to train one or two times annually and have a drill to test the system," he said.

Guy said the county tries to continually upgrade security at the courthouse whenever possible. In the last five years, Guy said the courthouse has been renovated, getting it up-to-date with current fire codes and providing safer escape routes. The courthouse also has a

motion-activated camera system operating 24 hours a day.

"We feel the courthouse is a safe and secure place," he said. "We have court officers patrolling the court areas upstairs and we have police officers coming in and out throughout the day. And having our new emergency response plan helps add to that security."

Although the (present)courthouse has never had a major emergency or critical threat, Guy said having a plan is in the best interest of the courthouse employees and the general public.

But if there is another "Battle of Athens (1946)," it sounds as if they will be ready.

"Although the courthouse has never had a major emergency..."

Folks, correct me if I'm wrong.
Maybe my memory fails me. I was only a child at the time.
Seems I remember it was destroyed by fire sometime around 1964.

For the last several days I have been hearing clear traffic on 171.75, which is a TVA police frequency. Normally all traffic is encrypted digital (doesn't appear to even be P25). They have been using a PL tone of 110.9 Hz. Those with PL capable scanners can program this tone and then you won't hear the digital traffic.

Could be Southeast Ambulance, or Lifeguard (which took over Erlanger's ambulance operation).

They have been using at least a part of this system since some time last year. Every County office in the courthouse and the courthouse annex, from what I can tell, have an emergency button. When this button is pressed a message comes over the McMinn County SOs' primary dispatch frequency that is repeated three times; "Officer needed County Mayors' office. Officer needed County Mayors' office. Officer needed County Mayors' office".

I have heard testing of a similar system for either Rhea or Meigs county.

3010. Erlanger's LifeForce air medical program to be sold

From: jim knight
Topic: 3013 Message: 3013

For those interested, I will be giving a presentation on trunked radio systems at the next meeting of the CARC. The meeting will be Thursday, April 3, at 7:00 PM in one of the community rooms at Memorial Hospital. Go in through the main entrance (not the patient entrance, but the big entrance on the opposite side of the hospital) and ask at the information desk if you don't know how to get there. The club is meeting at this new location to make the meetings more accessible to those who are unable to climb stairs. Anyway, the presentation will give an overview of how various trunked radio systems work, as well as show and tell with various trunking scanners.

Visitors are always welcome at the radio club meetings. If you are a ham
or would like to be one, you are welcome to join, but that's not required.
Come in the main entrance of the hospital and go down the hall to your
left. The community rooms are on the left past the restroom. We will be
in one of them, but I am not sure which.

From: Elighting
Topic: 3006 Message: 3021

I don't know if this is allowed or not,but
thought I would pass the word.I have some HAM
portable radios that I am trying to sell.They are
Vertex VX-150 VHF and Yeasu FT-50R dual abdn
V/UHF radios.All have batteries,charger,clips and
antenna's.The Yeasu's have orange rubber side
covers on them.My Fire Department used to use
these(have now moved to Motorola's(sadly) and
we're just trying to recoupe some of the money.I
have 1 of each on Ebay right now.

Like I said,if this is not allowed I apologize.

Thank you.
Jordan.

3022. "Simulcast"

Yahoo group: chattradio
Date: 2008-04-19 05:30:19 UTC
From: David Corbin
Topic: 3022 Message: 3022

I need to ask a stupid question, if I may. This has been driving me crazy, so here goes. I am in Catoosa County and monitor the SO. What I have noticed is, when I receive off of the "Ringgold" site, all is crystal clear. When I receive off of Lookout Mt., or what I think is named Simulcast off RR, many times it goes in and out "digital". Do all of the sites transmit the same traffic,in sync, or does it have to do with the location of the transmitting mobile radio. For example, could I only use the Ringgold site to receive Catoosa and Chattanooga or am I way off base in my thinking? I admit I kinda sorta understand how the Motorola Trunking works, but not really. LOL.

I live in Lakeview near Lake Winnie and have same problems
that David has. I receive both E. Brainerd and Ringgold towers
great, but Lookout Mtn. signal does what the Dispatcher calls
"going digital". It happens frequently and since we have identical
problems it must be something about transmission rather
our receivers. I would like to know more about what causes this.
I thought John Pless might have information on this sort of thing.
How about it John? I have Pro96 receiver.
Fred

I'm not familiar with programming the PR096. I know that the PSR500 has a way to set up more than one control channel and to choose to track the system using the strongest control channel, or any available control channel. If the PRO96 has something similar, you may need to use it. From what I have read, it takes some experimentation to get it working well (with the PSR500). I normally receive the main system control channel (860.9875) with no problems so I haven't had to play with using the Brainerd and Ringgold frequencies.

Just did a quick read of the user manual at radioshack.com. It appears
that the radio does not have the multiple control channel feature. But it
does say that you can program more than one control channel and the radio
will lock on the first one it hears. It also says the radio will ignore
locked out control channels. Try this: program all the control channels
and lock out all but the strongest one. I know that would be a pain if
you use the scanner a lot while driving around, but maybe it would help
when you're stationary.

From: David Corbin
Topic: 3023 Message: 3026

I experimented with that about a week ago and here is what I found: Locking out Lookout mountain seemed to cut out all of my Hamilton Co.,Chattanooga,and Eastridge except for the occasional Brock Rd. transmission. I didn't test long but I will give it another go when I get home. I'll try and use my 96 and 95. Even though the 95 will not translate the digital, It should at least pick up the transmission. That way I can tell when they transmit.;) I did this test with Chattanooga, I'll try it with Catoosa. I'll let you guys know what I find out.

3027. Re: Simulcasting Update

Yahoo group: chattradio
Date: 2008-04-22 00:38:14 UTC
From: David Corbin
Topic: 3023 Message: 3027

Been testing for about two hours, think I might be on to something.
Then again maybe not. Fred you might try this. OK here goes:
I had Control Channels and Alternates programmed in this sequence:
000 Lookout
001 Lookout Alt
002 Lookout Alt
003 Brock Rd
Etc. you get the idea. Ringgold was the las group.
I locked out all of the alternates, moved the Ringgold Site to 000
(the first channel in the bank) Lookout to the second and Brock to the
third. So far I am receiving Catoosa county off of the Ringgold site.
I checked before I started changing everything, and everything was
coming off Lookout. And yes "going digital" every now and then. For
now this seems to be the trick. I don't understand why, maybe someone
alot smarter than me can explain that. LOL. Fred, FYI, my location is
about Exit 350 on I-75. I never understood why I always got lookout
mountain, when I can practically see Taylor's ridge. This seems to
have worked for me, let me know if you find the same thing.

One other thing to note (from my location)
Lookout mountain 91% to 25%
Brock 89% to 40%
Ringgold 99% 91%

Those where the readings I got from watching the control channels
(Which makes alot of since)

Sorry for the long post, but this seems to have worked.

Yes ... the Pro 96 and 2096 CAN receive multiple Motorola control channels in the same bank. That unintended feature has been discussed in the Pro 96-related lists and forums.

All you have to do is program a conventional channel between each control channel, which causes the receive mode to drop the previous control channel (I use ITAC channels on the Palmetto 800 (S.C.) and Viper (N.C.) statewide trunked systems).

Because you can only enter one scan list per bank, this work-around is most-effective for multiple control channels that are part of the same system.

When using this method, each control frequency should have an alpha, so you know which site you are receiving.

The work-around does not work with the Uniden scanners.

Jeff Multer
Fort Mill, S.C.

3029. Simulcasting

Yahoo group: chattradio
Date: 2008-04-22 15:19:10 UTC
From: Fred White
Topic: 3023 Message: 3029

Thanks to all you Guys....I haven't had time yet but I intend to try Davids setup in an extra bank. At present my setup goes like this: I have 2 banks set for Catoosa and E. Ridge. In one bank I have both Brock Rd. & Taylors Ridge Control Channels with TDOT (HELP) trucks between the two (47.36)(low band conventional) which Jeff Multer suggested. On the other bank (Lookout Mtn.)which I have been using for Catoosa, E.Ridge, and TDOT Digital I.D. (33072). I locked out all Catoosa ID's which leaves me with no (going digital) Both Brock Rd. and Taylors Ridge towers are doing a good job.
Also David might try moving your Pro 96 around to raise % rate. There is one place in my house where I get 99% signal with 800 Mg antenna. If you don't like it in one place, consider this....I have a Low Band baby moniter sitting next to Pro96. I tune Pro95 to receive Baby Mon. And carry it any where on my property.....Just a thought...Thanks for your indulgence. Fred

3030. Re: Simulcasting

Yahoo group: chattradio

From: David Corbin
Topic: 3023 Message: 3030

After monitoring last night, I have (I think) verified the following:

If the Ringgold Site is in the first channel, This is the one it uses. I have a bank set up for Hamilton County. When I put Ringgold first, Brock Rd second, and Lookout Mt third, I missed alot of traffic. Moving Lookout Mt to the first channel, I got all my traffic back. Strange Huh? Another point of interest I noticed, If I hit manual to look at the % and I was looking at Lookout, If the scanner hit a TGID while monitoring, when I hit scan, it would go back to reciving off Lookout. I watched for a minuite or two turned the scanner off and back on and it went back to reciving off of Ringgold. I found this odd also. Will post if I find out anything else.

David

From: Fred White
Topic: 3032 Message: 3032

Thanks David. That is good info, but I would still like to find
the cause of so called (going digital). My PRO96 still has this problem
with Lookout Mtn. Transmitter. Since Catoosa Dispatch also has the same
problem in their system, maybe they will get it corrected.
Fred

3033. Re: Simulcast

Yahoo group: chattradio

Topic: 3032 Message: 3033

Update that may help you Fred. I tried what the post from RR said, and it works perfect. It seems to be scanning all CC's. However, I think this would work good if you were mobile. Last night I recieved Catoosa off of all three sites randomly. I think this is how it should work, but, when I recived off of Lookout, I got the weak "going digital" sound. Brock was not much better. When I recieved off of Ringgold, every thing was crystal clear and no missed transmissions. So I think if you were driving around scanning you would probably be better stepping the channels with conventional freqs. I'm gonna go back to the way I had it the other night because, I monitor Catoosa and I was receiving everything off the Ringgold site, and it was clear. I don't drive around much when I scan anyway. So, I think for me the best way is to have one bank for Catoosa only, and then my "Hamilton County" bank in another with the HC bank stepped with Conventional. At least CPD and ERPD are analog and just crackle instead of "going digital".

Matthew is exactly right about the frequencies. If you have a handheld scanner, I would suggest you take it to the city park in Charleston. It has perfect view of crossing at Mile 201 (Water Street, I think) along with a couple of sidings. Lots of switching activity between Charleston and Calhoun, with Bowater and Olin nearby. You will find that most northbound trains will announce their approach around the Dockery area, while southbounds will begin talking as far north as Sweetwater. No special antenna is needed.
Incidentally, aside from the nearby railroad, the park is one of the best kept secrets in the area. Very family oriented, absolutely no drinking, drugs, etc. If you choose to walk up to the crossing, you'll find Charleston motorists are very courteous. Almost all will wave, and they won't run over the kids.

3037. Railroad Radio Jargon

Yahoo group: chattradio
Date: 2008-06-09 23:16:17 UTC
From: Richard L. Elliston
Topic: 3037 Message: 3037

Can anyone point me in the direction of a reliable guide to
understanding the railroad jargon? I have no problem receiving the NS
trains and dispatchers, but most of the time I have no idea what they
are talking about. I realize the lingo is probably a bit localized.
For example, I doubt that there is really a place officially named "the
junkyard" in the Cleveland area.

It may very well have been an ambulance out of nashville.

quiet often our ambulances will transport patients to VA hospitals elsewhere. this could have been someone bringing a patient home and they were stopping in at walmart to get a few things for the ride home...

We do not have a private ambulance service in bradley as of now. There was years ago but they went out of business.

Lifeguard EMS has taken over all of Erlanger's ambulance's, they may very well of taken over Memorial's.(I hear East Ridge tone out Lifeguard, where they used to page out Memorial). Lifeguard operates off of Nextel for the most part but does have VHF for hospital communications and 800 Mhz for local fire and EMS I do believe. Like he said, they probably had a transport to Bradley county.

You must go to www.radioreference.com and use the database prompt. There, locate the state of Tennessee, locate Hamilton County and this will open all frequencies and trunking system information you'll need. For East Ridge and Chattanooga, look for the Chattanooga-Hamilton trunking system information and there, should find everything you're looking for.

My wife bought me one of these in 1998 when I was layed up after surgery. Took me a while to learn the programming. Had friends on different agencies that were trunked. This radio does not support pc programming, or, pc control. This was the RS version of the BC235xlt. Also, it couldn't track more than one trunked bank at a time and follow conventional. You could load 10 banks up with conventional and run those. When the 245 came out, got one of those. It was a giant leap forward in scanners. You could follow trunked systems, and conventional, pc program and control the scanner from the pc. Had one for many years, sold it and got a RS Pro-92.

3061. Police, Firefighters Getting New Radio System

Yahoo group: chattradio
Date: 2008-09-12 13:47:29 UTC
From: Larry Wilson
Topic: 3061 Message: 3061

http://www.newschannel9.com/news/system_971485___article.html/radio_getting.html

September 11, 2008 - 7:28PM
John Pless

Chattanooga is building what some are calling a model radio communications system for the state of Tennessee and country.

It comes on the seventh anniversary of 9/11 when hard lessons were learned from New York's police officers and firefighters. During the attacks on the Wold Trade Center emergency responders discovered they could not communicate with each other because their different kinds of radios transmitted on different frequencies.

It's a nationwide problem that affects just about every metro region in the country.

Since 9/11 all the different public safety agencies in Hamilton County switched to a shared analog 800MHz radio system that allows everyone from every agency to talk to each other during emergencies.

About a year ago the idea surfaced to expand this system to the entire region and the U.S. Department of Homeland Security loved the idea so much they sent money to the city to get the job done.

Paul Page, Director of General Services for Chattanooga, said "the federal government came through the state and funded that for us, we were successful in writing that and getting this grant."

In all more than $20-million in federal grants are paying for the expansion of Chattanooga's radio system to a regional digital system using the latest technology.

The Georgia counties include Catoosa, Dade and Walker. In Tennessee the venture includes Hamilton, Bradley, McMinn, Rhea, Meigs, Roane, Louden, Anderson and Knox counties.

Chattanooga's radio shop director, Arnold Hooper, said the system can be expanded to cover more counties in Georgia and Tennessee.

"We will be able to communicate system to system, much like roaming in a cellular network, it will be more roaming in a public safety world," Hooper said.

Currently counties in the Tennessee Valley use a hodge-podge of 42Mhz, 150MHz and 460MHz frequencies.

The Chattanooga 800MHz system now uses six radio transmission towers - five in Hamilton County and one on Taylor's Ridge south of Ringgold. Hooper said plans are to install new 700MHz and 800MHz digital transmitters from Dalton and Trenton, Georgia to Knoxville. Many of the transmitter sites will be installed on existing radio towers now used by various counties for their aging, analog transmitters.

The first agency outside Chattanooga to join their system is the Catoosa County Sheriff's Department and all other public safety agencies in that county.

Catoosa County Sheriff Phil Summers said their older 150MHz system only gave 60% radio coverage of the county with portable radios, exposing officers to "dead spots" where they were not able to call for help if needed. He said with their new 800Mhz digital radios officers are getting better than 90% coverage with portables.

Sheriff Summers added the digital transmissions are clear, static free and penetrate into buidlings that before blocked signals.

"We had no communications once inside Hutcheson Medical Center, even in Wal Mart we had problems communicating because the signal would not penetrate the steel in buildings," Summers said. "With 800Mhz we now have communications that improved throughout Catoosa County."

Summers is spearheading the work to get Walker and Dade counties on line with the Chattanooga system, and negotiating with other Georgia counties to join.

Summers said by joining the Chattanooga system he saved taxpayers millions of dollars. After getting estimates from several companies for building out a digital system for Catoosa County he learned it would cost about $5-million. The cost for joining the Chattanooga system cost $1.5-million for the tower, equipment and 911 Center consoles. Most of that was covered by the county's SPLOST tax which is up for voter renewal and approval.

Catoosa County does pay about $60,000 per year to Chattanooga to cover the costs of maintenance and emergency repairs. As other counties go on line they will also pay a similar fee to keep their towers and equipment working.

According to the provisions of the federal grants the "P-25" digital trunked system must be built and on-line by July 1, 2010. It will be up to individual cities and counties to pay for the radios in the field, but Hooper said there are state and federal grants available to help with those costs.

"We've got a huge project in front of us but our vendor's come to the table and put a very aggressive time line and we're going to be busy the next two years," Hooper said.

Its MDC1200. We use 100% motorola equipment so its not fleetsync.

CPD uses Kenwood and have a similar identifier when they unkey.

And Jordan, i wouldnt say we have 100% VHF coverage, but its certainly better than an 800 system would provide. There are a few places in the northwest area of the county that are RF dead spots on an portable, but we do have probably 100% mobile coverage.

800 for our mountainous area isn't bad as a back up or secondary system, but i dont think it would be good as a primary system. It would cost hundreds of thousands of dollars to build an 800 infrastructure in bradley county that would provide 100% coverage. VHF isn't broken so there is no need to fix it...

When I said almost,I was taking into consideration both mobile and portable.I have heard 100% mobile,90% portable. I am unsure if this counts for all agencies or just EMS or fire or SO/PD. CPD has the Transcrypt ANI in them. I am sure there is some Fleetsync up there.

Its MDC1200. We use 100% motorola equipment so its not fleetsync.

CPD uses Kenwood and have a similar identifier when they unkey.

And Jordan, i wouldnt say we have 100% VHF coverage, but its certainly better than an 800 system would provide. There are a few places in the northwest area of the county that are RF dead spots on an portable, but we do have probably 100% mobile coverage.

800 for our mountainous area isn't bad as a back up or secondary system, but i dont think it would be good as a primary system. It would cost hundreds of thousands of dollars to build an 800 infrastructure in bradley county that would provide 100% coverage. VHF isn't broken so there is no need to fix it...

Thier is supposed to be a regional system put up between here and Knoxville. That system will more than likely never work. Bradley county has almost 100% coverage with the VHF system. The roger beeps your refering too are eithe ANI,MDC or Fleetsync identifying who keyed up.

Did I hear the news cast right that there was a federal grant and put all of those counties using a truncking system? I really hope so After hearing Chatt clean crisp comunications and then go to bradley and cleveland and hear all of those roger beebs sqelch noise.. They have the noisiest radios around. The plus side of the trunked system would be that every one could be connected... if anyone has any updates about this radio upgrade lets hear it..... .....

I second that Rusty, 700/800 for Bradley county is a horrible idea. One study suggested it would take 4 to 6 sites to have 90-95 percent coverage with 700/800 MHZ. BCSO is pretty much 100 percent at the moment on mobiles and that is with 3 repeaters, I would give it 87-90 percent on portables, Pac-rt's wouldn't hurt though. Why change something that has worked great for the past what 20-30 years? Much less a Quantar flashed for Intelli-repeater operation and P25 CAI would cost around 15k-20k per unit.

Not to mention you would have to have an Embassy switch and possibly a Zone Controller to handle everything. And let me guess the system link would be a microwave site link back to Lookout or White Oak with no redundant linking.

And to answer the ANI question all I know of is MDC in use for BCSO, CFD, BCFR, and BCEMS. The only other ANI I've heard is those annoying Transcrypt boards that CPD uses.

Technical issues such as coverage and interoperabiltity aside, you've got to consider the political realities:
1. Feds never buy anything for locals without at least some matching funds.
2. Bradley County Commission is not going to spend a dime on this.
3. Bradley County Commissioners would reduce Sheriff's communications equipment to tin cans attached by strings if they could get away with it.
These realities considered, it simply is not going to happen.

I really dont think the system that Bradley has is all that great. They have great Motorola equiptment. There is so much uncovered places with too much static. And all of those beeps dont hapen with all of those radios.Some of city radios do it also. I know VHF is good for this kind of terain. I thought the identfiers was a silent signal that showed up at 911 dispatch. All of that beep is like those crappy cb roger end of transmission beeps.
I know the commission will try and put it off if they can just because of all of the other crap Gobble has pulled But I think it would be great for the whole operations of the "ALL" city and county goverment and schools to operate on ONE system like Chattanooga. We are in an place with nuclear reactors, tva dams IT would be in the city and countys best interest to be able communicate with everyone and the surrounding agencies.

How do we communicate with Chattanooga with their sysytem now. I know big head "B" spent thousands of dollars to set up a system in the mobile command post but what about 911 or the supervisors do they have access to their system??????

All of the data squawk's are identifiers. The only way your not going to hear the identifier is if they go digital,They are not just a roger beep.If you have a Motorola radio that shows MDC ID's, or a ANI decoder you too can see the ID's. Just like you can see the ID's of Fleetync with a Kenwood(on most radio's).

Also forgot to add. The radios that do not have an Identifier are either not programmed correctly or are too old to have newer protocol identifiers. In some cases, if they have an odd ball radio(Icom, Midland or such), they just don't have a protocol of their own. I believe Bradley County's case is one of the first 2 choices though.

There is a Windows app out there called WinMDCD that decodes MDC1200.
Works well; I've tested it with Southern Adventist University's Campus
Safety as they have enabled MDC on their radios. Also played with it
on my Chicago trip earlier this year. Neat program.

Police say burglary fails when radio talk intercepted

Local News

ryan harris

Staff Writer

Police say burglars attempting to loot an Athens Dollar General store this morning had a seemingly perfect plan that has worked countless times on television: One guy goes in the back of the store while communicating with a lookout on a two-way radio.

There was one hiccup in the plan, however.

Workers at the nearby Wal-Mart intercepted the radio communication and reported hearing all the juicy details of the burglary to police. The last thing Wal-Mart officials reported hearing was the lookout screaming "Five-O" when police pulled into the Dollar General parking lot.

"I think they watched something on TV and thought it was a good idea," said Athens Detective Heith Willis.

Doyle Engle, 51, of Erwin, was arrested and charged with attempted burglary. He is being held in lieu of $20,000 bond and is due in court today.

The second suspect believed to have attempted to enter the Decatur Pike store ran from police and is still at large. A surveillance video showed the suspect wearing a blue bandana over his face.

Nothing was taken from the Dollar General store. Investigators said there was minor damage after the suspects attempted to cut wiring leading to the store's alarm and the store's door was pried open. The alarm system still activated.

The attempted burglary occurred at about 2 a.m. this morning. Wal-Mart officials told police they heard men talking over two-way radios about burglarizing a businesses next to the Walk in Closet, one of several stores in the shopping center where Dollar General is located.

One of the men said over the radio that he was parking his car near a semi-truck, Wal-Mart officials told police.

When officers arrived, a green Ford Focus was parked exactly where Wal-Mart officials said it would be.

An incident report states that Engle was inside the vehicle with a Motorola radio tuned to the same frequency as the Wal-Mart store.

Engle reportedly told police had was using the radio to listen to fire department traffic. The radio was seized by police as evidence.

From: Carl DeWhitt
Topic: 3081 Message: 3081

I just moved to east Tennessee from Oklahoma a little over 1 month ago.I am currently living with friends in Walland near Knoxville while waiting to close on a house i am buying in Maryville which is also near Knoxville.I am into a portion of the am dx hobby called ultralighting which is dx with small pocket sized radios.If you want to know more you can contact me off list.The dx that can be logged with these little wonders is amazing.My favorite is the Eton E-100.I also have the Sony SRF-59,Sony SRF-M37V and Sony SRF-M37W.I use them barefoot or with help from he Select-A-Tenna.I would like to contact other am dxers in east Tennessee and compare notes/swap tips.I also have the G.E. Super Radio 3.It is not an ultralight but is a great radio.

;;;;;From Cleveland Daily Banner;;;;;;;

>The "Interlocal Agreement for Public Safety Interoperable
Communications" is based on a system operating in the 800-megahertz
radio frequency range. Under the plan, a network of towers would link
each of the participating agencies to a hub jointly owned by
Chattanooga and Hamilton County. The hub facility is managed by the
city's Mobile Communications Services.

The system would be funded through a Homeland Security Agency grant
to purchase access to existing towers and acquire or construct
additional towers, equipment and maintenance costs through June 30,
2010.

According to the agreement, an unspecified payment will be assessed
on an annual basis.

Emergency management agencies asked to consider the agreement are
Polk, Rhea, Meigs, McMinn, Monroe, Roane, Loudon, Knox and Anderson
counties. Chattanooga already has agreements with Catoosa, Dade and
Walker counties in Georgia.

3083. Rebanding

Yahoo group: chattradio
Date: 2008-11-16 20:04:21 UTC
From: Matthew Sadler
Topic: 3083 Message: 3083

Rebanding has begun for the Chattanooga/Hamilton County system...

The Catoosa County site has been rebanded. Frequencies are on RadioReference (just take the old ones and the new ones are 15 MHz lower than before).

From: tn35vol
Topic: 3084 Message: 3084

I am now hearing chattanooga on 854 and 855 freqs. Anyone know the exact channels. Someone said they are rebanding

3085. Chattanooga's Freqs Found Here

Yahoo group: chattradio
Date: 2008-11-23 06:00:50 UTC
From: tn35vol
Topic: 3085 Message: 3085

I have found several new freqs that I am assuming is part of the rebanding/

Here is what I discovered so far. Anyone else please post changes your aware of. I am not sure whats up with the trunking. I had to put this in a bank and scan them traditionally. Sounds like some of the channels. Not sure if it is all.

854.0125

854.2625

854.3375

854.6625

854.7125

854.9125

855.1875

855.3625

855.4375

855.6375

855.6875

851.6250

851.9000

851.4125

853.4125 sounds like a control channel

They have started by rebanding one site at a time. What you are hearing is Catoosa County's site. It is unclear on when the Brock Rd site and the simulcast site will follow. The frequencie you have will eventual fall into a pool of new assigned frequencies for the Brock and simulcast sites. Stay tuned.

Thanks Matthew. I hadn't noticed the difference since the new primary control channel 856.4625 was an alternate control channel before. Since I had it programmed into my radio, it kept right on tracking the system. But I thought I remembered reading that rebanding would mean changing the "channel formula" such that older trunk tracking scanners would no longer work. This would not be a problem for the BC246, PSR-500 or BCD996T since the firmware can be reprogrammed. But I thought that older scanners like the BC235, etc. would be looking in the wrong place when rebanding happened. I'll have to get out my BC895, program in the new channels, and see if it still works. (Of course it won't work on any digital talkgroups) That would be a bonus for anyone wanting to sell an older radio!

To the best of my Knowledge Simulcast is Lookout mountain, Brock Road is east brainard, Ringgold is Taylors ridge. I would think that you could get away with putting one in. The best signal. If you recieve all clear, I'd put them all in. The only reason I lock out Lookout when I'm at home is because the Catoosa digital breaks up alot from my location. Its all clear on The taylor's ridge site. If they were all clear i'd probably put them all in. Don't see what it would hurt. Less likely of missing any traffic. I'm just a trunking noob though. LOL. Someone chime in if I'm wrong.

3095. Confirmed: First generation trunktrackers still work

Yahoo group: chattradio
Date: 2008-11-25 12:16:23 UTC
From: jim knight
Topic: 3095 Message: 3095

I programmed my BC895 with the new Hamilton County TRS frequencies and it tracks the system just fine. I remember reading (Monitoring Times, I think) that rebanding would make older trunk tracking scanners not work any more. Probably that's only true if the system uses frequencies that don't conform to the old channel formula. Since all the ones we are using here do conform, no problem in this area.

Mornign Jim and all,

Since I wrote the original article on this and it has appeared many, many times in MT and other places in many formats, let me set the record straight. The only system that rebanding impacts from a scanner point of voew are Motorola "analog only" trunk radio systems. Your mixed mode CHA and any P25, EDACS, LTR etc are not impacted in older scanners by rebanding. Your 895 would not be on the extinction list since you are monitoring a P16 mixed mode system. Monitor a rebanded analog system and you would not be able to trunk it.

Hopefully that will clear up the confusion.

Thanks, Larry. I wondered if you might see my post. I did go look briefly at the MT web site and didn't find your original article, but a couple of other references seemed to indicate the more general case. It does make me curious: can you fill in any technical reason why an analog only system would be impacted? I remember a formula something like Freq = 851.0125 + channel # * 0.0125. The controller sends out a message something like "all radios on talkgroup X, tune to channel 120" and the radios use the formula to figure out the frequency. It would seem from this (if it is actually correct) that as long as the frequencies used in the system agree with the formula, the older scanner would still work.

I can hear the new freqs but havent tried the trunking yet I have a radio shack 500 triple trunker. I may not have the control channel programed. It could be your problem. Some scanners have to have the control channel unlocked or programmed to work. I will try mine tonight and see what happens.

I can hear the new freqs but havent tried the trunking yet I have a radio shack 500 triple trunker. I may not have the control channel programed. It could be your problem. Some scanners have to have the control channel unlocked or programmed to work. I will try mine tonight and see what happens.

Simulcast is, as the word suggests, simulcast from four different sites:
- Lookout Mountain
- Signal Mountain
- White Oak Mountain / Ooltewah
- Sale Creek Mountain

Brock Road is out near I-75 and Bonny Oaks Drive. There's really no
reason to listen to it as anything on it will probably (99.9999%) be
on the simulcast site.

I stand corrected. Thanks for the info Matthew. I have always wondered why it was called Simulcast. That explains alot. When I listen to Chattanooga PD, can I use the Ringgold Site to recieve or would I have to put the Simulcast in. It seems like in the past I catch sparatic conversations. The Simulcast is very "poppy" from my location here in Ringgold.

I suspect that they have made some recent changes/adjustments in the White Oak Mountain site. Just to keep up with rebanding, I've been carrying the scanner around in the car for several days in the Cleveland area, using the 800 MHz antenna that RS sells. I've been getting a greatly improved signal throughout the Cleveland area. Of course, this would be entirely consistent with their well-known plans to market the system to surrounding counties.

I'm pretty sure it's White Oak. as we cross the mountain on I-75, signal gets very strong, control channel remains unchanged after arriving in Cleveland.
By the way, McDonalds at Paul Huff Pkwy and US11 is a great place to monitor Chattanooga TRS from Cleveland. Signal strength there is about the same as in Chattanooga. Reception is usually best with antenna horizontal.

From: Richard L. Elliston
Topic: 3107 Message: 3107

Is WDEF Channel 12 having a transmitter problem? We've been getting a weak signal just south of Charleston for several days. Others in Cleveland area have noticed the same. Reception of other Chattanooga stations remains good.

They have reduced power on their analog channel as part of their work
to prepare for the DTV conversion in February, per FCC filings. No
other stations in the market have/are doing this.

Are they already running full power on their digital channel? I had
not planned to buy my converter until February, but it looks like I'll
hsve to go ahead and make the purchase. Of course, that's not going to
do much good if the digital signal is also low power.

Their digital channel is currently 47, but they will be shutting it
down and moving their digital operations to channel 12 after the
February switch. I would strongly advise going ahead and buying a box;
there's really no reason not to. I believe they are running at full
power on channel 47.

Do you know the plans for all the area stations? I'm sure it's out there somewhere but not sure where. Specifically, will they remain on their new channel after the switch, or go back to their old one? I'm curious because my cable has pretty bad interference at times from broadcast channels 3, 9 and 12 with the cable channels on the same frequency, and some interference on channel 13 since that's the digital version of channel 3. I want to know where the interference will be after the switch.

Here ya' go:

WTVC (ABC): 9
WDEF (CBS): 12
WRCB (NBC): 13
WELF (TBN): 16
WTCI (PBS): 29
WNGH (PBS): 33
WDSI (FOX): 40
WFLI (CW): 42

These are the RF channel assignments. Stations will likely continue to use their old channel number in their PSIP (so you'll "tune" to channel 61.1 for example, but the box will translate that to RF channel 40).

From: Fred White
Topic: 3083 Message: 3114

I have a problem with Catoosa Rebanding.
I have programed all new freqs. as listed in Radio Reference.
I have all three transmitters in different channels.
I receive the Lookout simulcast fine. 856.4625 control but on
Ringgold. 853.4125 or E Brainerd 453.8000 I don't
receive anything.
I do get the Control Channel noise on each, but only receive
normal on simulcast.
Am I doing something wrong?....I'm using PRO96 scanner.
Appreciate any help......and MERRY CHRISTMAS TO ALL...
Fred

Hey Fred Go and read the Second sticky in the Radio Reference forums. Under the Scanner Models Discussion, Radio Shack Scanners. This seemed to help my 96. Mine would only pick up on the Ringgold Site 99% of the time. What I did was put the CC's in say Channels 001,003,005. I then put 1300.000Mhz in 000,002,004. This did seem to help me. I now recieve off of both Simulcast and Ringgold.

THANKS DAVID.....this has become too complicated....I guess i'll just listen to the simulcast untill it quits working and retire the PRO96 . It has served me well. Maybe something will come out ready to go. Thanks again

Hey Fred Go and read the Second sticky in the Radio Reference forums.

Under the Scanner Models Discussion, Radio Shack Scanners. This seemed to help my 96. Mine would only pick up on the Ringgold Site 99% of the time. What I did was put the CC's in say Channels 001,003,005. I then put 1300.000Mhz in 000,002,004. This did seem to help me. I now recieve off of both Simulcast and Ringgold.

Just thought of something. Are you using software to program?

Have you checked out the Pro-106, or, the GRE version, the 500? Both do multi-site. Go the www.radioreference and check out the wiki section on the newer digital scanners. I have a 106 and it beats my 96 into the ground with all that it does. A whiz to program with Win500. Since I don't have any multi-site trunking in my area--Metro Atl, don't know how it works. Check out the forums on radio reference. There is a multitude of info on the new scanners and how to use them.
HTH,
Larry

3121. 800 system for Bradley

Yahoo group: chattradio
Date: 2009-01-19 17:52:49 UTC
From: radioscanner4fun
Topic: 3121 Message: 3121

I dont understand why Troy Spence would not want to join in on the 800 system so they can be tied in with every city and county for emergencies. He stated in Cleveland Daily Banner that it would slow response time to join in with 8oo system. It seems they want to buy their own system so a select few could profit. And there is a few that would profit thier own pockets for this type of set up. Yes it will cost a few dollars but we have to many nuclear sites, water dams ect ect. But after the hurrican it really shows what can happen. I know I am just a nobody buy I just dont understand....

3122. rebanding

From: tn35vol
Topic: 3122 Message: 3122

since this new rebanding took place. i notice alot of data noise on the new 800mgz channels is this normal and will it last?

I have a triple trunking scanner pro 528 model it seems to trunk then stops suddenly.

Anyone have a clue?

Could someone put sum lite on this. With all of the stuff that the 800 system could do verses a standard vhf system. It just make no sense to me. Yes a 2 or 3 more towers would have to be put in... I get a notion that Chattanooga would be over the system, maybe or maybe not. There is few people with their egos and pockets being padded is why they want to keep a all in house communications... If sume one can help explain PLEASE JUMP IN and let me hear it.....

Ya me either. I understand about the whole interoperability thing and that's great concept and all. I just don't understand why they are going along with this project.

Because all they would have to do is put a XTL1500, 2500, or 5000 with a yagi antenna pointed at the nearest Chattanooga tower, White Oak Mtn in this case, and connect that XTL mobile to the console via DC or Tone remote and setup a cross patch between a Chattanooga system talk group lets say Mutual Aid 1 to a VHF channel say BCEMS and there ya go, interop complete. Now granted there will be a 200 to 300 millisecond delay in the audio between the patch, but it would work.

Not to mention save a whole lot of money, about 5,000 to $8,000 dollars verses a few million dollars for the tower sites, infrastructure, mobiles, portables, and base stations.

But hey that's my .02

Here is the reason, folks! A company called Money Rola who continues to go to Cities, Counties and municipalities and shove there over priced stuff down their throats at tax payer expense then when it is finished wait a year or so and come back and say. O, by the way. We don't support that anymore, so here's our hand out wanting some more of your tax payer dollars. They figured out years ago how to get a government bail out.

Well it sounds like Bradley County has already purchased some new repeaters. So it may already be a done deal for the staying with VHF. I dont hear the all of the ID beeps now so did they buy all new radios also?
Where are the repeaters and antenna sites for bradley county. I know they used to have one on bean mountain.

3129. Digital TV Changeover About to be Delayed!

Yahoo group: chattradio
Date: 2009-01-27 06:08:16 UTC
From: Richard L. Elliston
Topic: 3129 Message: 3129

Today the U.S. Senate voted unanimously to approve President Obama's proposal to delay the digital TV changeover until June 12. The House is expected to approve the measure as early as Tuesday. My guess is that prices on the boxes will be slashed almost immediately. Retailers have huge stocks of them on the floor in anticipation of a February changeover. This is not a time when any retailer can afford to have money tied up in dead merchandise, even temporarily. Folks in Bentonville are gonna say "Move 'em out!"

3130. Re: [chattradio] Digital TV Changeover About to be Delayed!

Yahoo group: chattradio
Date: 2009-01-27 10:52:02 UTC
From: Sean Paul
Topic: 3129 Message: 3130

Most folks are not even going to be effected by the change anyway as they have cable television anyway. And, the ones who are going to be probably have already gotten the boxes which they needed anyway.

Subject: [chattradio] Digital TV Changeover About to be Delayed!

Today the U.S. Senate voted unanimously to approve President Obama's proposal to delay the digital TV changeover until June 12. The House is expected to approve the measure as early as Tuesday. My guess is that prices on the boxes will be slashed almost immediately. Retailers have huge stocks of them on the floor in anticipation of a February changeover. This is not a time when any retailer can afford to have money tied up in dead merchandise, even temporarily. Folks in Bentonville are gonna say "Move 'em out!"

Umm, sorta...

This bill was changed a bit to get the republicans to support it, and what they've changed is that stations can go ahead and discontinue analog service at any time. The June 12 date is a drop-dead date for analog. The original bill would've required stations to continue analog service until that date.

Many stations have already lined up tower crews for antenna work and/or do not have spare parts necessary to keep analog transmitters serviceable much longer. Plus, operating two transmitters is a pretty expensive proposition; stations can expect to save thousands of dollars monthly by shutting down analog. Obviously, in this economic environment, they'll be keen to save $$$ wherever possible.

Thank you for this insightful data. The **** meddling REPUBLICANs, if they ALL fell off the face of the planet, I do not think anyone would miss them. However, I believe most, if not all stations will maintain analog for as long as they are legally permitted because it helps their advertising revenues and dropping it prematurely as they have the choice to continue will also generate constant cost of labor to answer the calls of irate viewers calling in to complain. It's about time the FCC, i.e. Federal Communications Commission took charge of this issue as it is in their line of work, not that of the congress, senate, etc.

There is one problem I do know though and that is some of the re-assigned spectrum after digital switch is for emergency public safety and the delay causes them a delay in accessing their new space. However, if they had appropriated or used an emergency bill to award additional funds to the DTV converter coupon program that was UNDER-FUNDED, we would not have needed a delay in the first place.

Interesting, thank you for the information, Steven

Here is the view from the broadcast engineer's point of view. Bentonville may not be happy, but there will be a lot fewer stations shut down for lack of readiness. All too often a temporary shutdown becomes permanent from loss of revenue.

The politics and economics of this changeover are interesting, but I simply have not had time to familiarize myself with the technical aspects. Will the frequencies and power of the digital transmitters differ significantly from the analog transmitters? Few years ago, I bought the best outside antenna I could find -- it's huge, and it cost me a few bucks to move it to my current residence in Charleston area when I moved in 2001. It's admittedly nearing the end of its usful life, but I'd like to know if I'm going to be able to continue to watch Knoxville and Atlanta stations after changeover.

Your old antenna will work just fine with the digital signals.

Your signal will be better. Most station antennas are in the same location.

I just didn't want to give up the repeated input tones. Those are top secret. And why do you need pl tones for a scanner?

Sorry, but Rusty has a bald head, not a big head. He may have just mistakenly used the words top secret instead of using the more appropriate word of "unpublished". There are no secrets in the RF community, only information that has not been researched and discovered yet with the proper tools. Not much that a little time, a decent antenna, a knowledge in input/output freqs, and a tone scan (PL/CTCSS/DCS/DPL/DTSS/DTMF) squelch function can't do.

Ok guys, I did not mean to start a disagreement, and I hope it's all in jest. Anyway, I suspect that the recent tone change is only the beginning. Would they really bring in all the radios for reprogramming just to change one tone? Not likely. I've heard some conversations that suggest that some new frequencies may be coming into use. Yes, I know the FCC database does not show anything new, but historically, that has not been helpful when monitoring agencies in Bradley County. (See the string starting with message #2827, for example) If we all spend a few minutes daily searching the VHF freqencies, I think we might find some real prizes to share.

We changed alot of stuff and yes, we added some new frequencies in addition to changing some PL tones around. And yes it was a bear of a job but we handled it and all is well.

I can ditto Rusty's response. Probably between the city pd and county so there were atleast 800 radios to reprogram for multiple reasons and that's not counting all that EMA programmed for various agencies as well. It's been a long time coming, but it's working and nearly everything is becoming less prone to interference from neighboring and distant jurisdictions. You know you have done a quality job when the signals are so clear that everyone thinks you are on simplex or asks did the repeater key up or not. Obviously, you can't get rid of all interference, but when it's limited to an occasional heterodyne then you have made a huge leap in the right direction. It's definately been a lot of work to do for a handful of people, but it's paying off. Rusty

Sorry, went through the email from newest to oldest and missed this, but yes, you are right for the mostpart. Not sure what is left in the field that is not narrowband compliant yet, but eventually all that stuff will have to be replaced and programmed as well. I do wonder what will be in store after refarming/rebanding once narrowband compliance is mandated. I bet there will be a lot more reprogramming coming though :^) Rusty

Rusty I will be man enough to appoligize for my comments. Scanner post, I can use such things as the PL Tones... But any way you wanted to keep it low profile and I was just asking a simple question for me... But anyway. No hard feelings here. I just love tracking and finding new signals.....I do understand some of that info does not need to be in the hands of some people....but it does get out....

I don't think any of Eaves stuff was smartzone. I think it was some other type of protocol. And no, we don't have any trunking stuff in the county.

I think we mainly bought equipment and a site from him. Maybe some licenses but we don't operate on any form of trunking system in Bradley at all. Now, some of the homeland security stuff that is being purchased will be put onto the Chattanooga system to allow for interoperability, but will not be used as a primary form of communication for Bradley Co.

someone correct me if I am wrong, but i know we sure did an awful lot of VHF programming and bought a lot of VHF equipment to turn around and start going 800mhz. We don't even have the infrastructure here for that kind of stuff.

Richard,does the radios that the county uses, would they work with

the smart zone 2 that was bought from eaves?

Just to clarify that the Eaves trunking system was a SmarTrunk II protocol<http://www.smartrunk.com/en/index.html>it was the first of its kind in the U.S. or at least that is what I was told. SmarTrunk II has no dedicated control channel and is similar to an LTR type of system. As far as I know there is no scanner that will monitor SmarTrunk II. But, that doesn't matter now because that system has been decommissioned anyway. SmarTrunk now makes a Wide Area type of system that will mimic a SmartZone system but, will probably never be as reliable or as fast as a SmartZone system.

Oh my goodness... I saw that one coming a mile away, hehe.

Hey Stuart, do you drive the Suburban with the antenna mohawk down the roofline and is yourr Dad Sam?

Not to change the topic, but this is RF related and I am under the impression that these new "safelink wireless" phones out there are basically free phones and service for those on welfare? For those in the business, I wonder how long it will take for this to turn into subsidizing communications for the criminal element? I just don't see a free cell phone and free service as a basic need. Can't wait to see some statistics as to how many of those phones will be used in the commission of a crime...especially a felony since we all know that government housing has a reputation for being high crime areas.

About this safelink wireless. My girlfriend's mom got one of these phones. The paper work has to be just right to get one of these. I think they even check back every once in a while to make sure you still qualify.Thank you.

The GRE PSR-500 and 600 will display NAC and optionally use it to
determine whether the squelch opens. They also do the same for PL/DPL.

OK guys, monitor this one:

152.315 Mhz
PL tone possibly 136.5
Yes, of course, it's an Eaves frequency.

bit more info:

it's called Mike channel.

will apparently go 10-7 daily at about 11:00 PM

PL tone is definitely 136.5

Thanks, Rusty. I knew "Mike" did not sound quite right.
Multi_Agency means this is where you'll hear the dog catcher, plus
other stuff. Oops, i think the correct term is animal control.

In my scan of the eaves freqs I find alot of county usasge JS units
public service units,,, 152.3150 and the pl shows up on my search is
DCS205 ?????
Richard have you heard any traffic other than the dog catcher?

Topic: 3137 Message: 3166

My guess is Richard is using a Radio Shack scanner, like my PRO-92. They will tend to show a 136.5 PL when the frequency is actually using a DPL.

I noted the 205 DPL myself. Also, the school buses in Dalton are using 152.3075, the lower adjacent narrowband frequency, with DPL 026 so if you can you should enable DPL squelch to block then out. I get both full-scale in Harrison.

[Non-text portions of this message have been removed]

3167. Re: Bradley Sheriff Tone Change

Yahoo group: chattradio
Date: 2009-02-14 04:57:09 UTC
From: Richard L. Elliston
Topic: 3137 Message: 3167

Matthew is exactly right. I'm using a Pro96, and I was beginning to suspect something was not quite right about my tones. Looks like I need to use the DPL code search.

There's been a lot of testing of a repeater today on 152.405 MHz -- yet another Eaves frequency. Also some testing on 153.065 MHz, but it's my guess that it is the input frequency for the 152.405 repeater.

3168. Re: Bradley Sheriff Tone Change

Yahoo group: chattradio
Date: 2009-02-21 16:05:59 UTC
From: radioscanner4fun
Topic: 3137 Message: 3168

Boy everything has got quiet on the group since after a little bit of searching. It is just as easy to find all PL codes with a bit of searching. Not much in the radio spectrum is top secret or classified anymore.mmmm LOL....
Has anyone turned up anything else new other than the old eaves freqs? Not asking for top secret stuff just open freqs that Bradley and Cleveland maybe using.... Thanks all

3169. PRO 106 HELP!!!

Yahoo group: chattradio
Date: 2009-02-24 17:28:57 UTC
From: Dustin Aaron
Topic: 3169 Message: 3169

Dear Friend: I live in the East Ridge Area, I was just wondering if you know anyone from your group who is local and has a Pro-106 Scanner .Someone with the know-how to program the scanner to the set-up I desire.I will gladly pay a fair fee for the time invested to help me...I love my new hobby and the good people I am meeting .I really would like to *get* the most out of my scanner and *give* the best support and help to my new friends....Truly Greatful for your time...

Here's some Radio Shack links to download the manual and other goodies for the Pro-106.

Quick start guide: http://rsk.imageg net/graphics/uc/rsk/Support/ProductManuals/2000106_QS_EN.pdf

Manual: http://rsk.imageg net/graphics/uc/rsk/Support/ProductManuals/2000106_PM_EN.pdf

Special global menu: http://rsk.imageg net/graphics/uc/rsk/Support/ProductManuals/2000106_GM_EN.pdf

V-scanner preprogrammed data: http://rsk.imageg net/graphics/uc/rsk/Support/ProductManuals/2000106_AD_EN.pdf

Here's the page that links all the above:

http://www.radioshack.com/product/index.jsp?productId=3348287&tab=support

Looks like you may need a masters degree to program it. GGGGG
Enjoy the radio!

For some reason the forum didn't like the manuals links. Ordinarily that's no problem
but it also deleted a period between imageg and net which makes the four manuals links worthless. The last one worked like a champ. I'll resend them here.
If they still don't come over correctly use the page that has these links also.

Quick start guide:
http://rsk.imageg.net/graphics/uc/rsk/Support/ProductManuals/2000106_QS_EN PDF

Manual:
http://rsk.imageg.net/graphics/uc/rsk/Support/ProductManuals/2000106_PM_EN PDF

Special global menu:
http://rsk.imageg.net/graphics/uc/rsk/Support/ProductManuals/2000106_GM_EN PDF

V-scanner preprogrammed data:
http://rsk.imageg.net/graphics/uc/rsk/Support/ProductManuals/2000106_AD_EN PDF

Page with the above links. This one worked but here it is again:

http://www.radioshack.com/product/index.jsp?productId=3348287&tab=support

3173. 2 Questions...

Yahoo group: chattradio
Date: 2009-02-24 19:37:40 UTC
From: goodtroop
Topic: 3173 Message: 3173

Two easy questions for you gurus. Any help greatly appreciated.

1) Could someone please provide Dispatch "Paging" freqs for Bradley Co. EMS and TriComm(unist) FD?
 2) What would be the digital Trunktracker of choice these days for Chattanooga PD /Fire? Would Uniden BCD396T be the ticket?

Thanks!

Not a guru, just a beginer. Love to learn new stuff about all of this radio stuff. I am using a Uniden396 and it is great. I was unsure at first just because of the price. But after usuing it for a year or so I am very happy with it. You can subscribe to radioreference.com and auto send your freqs and PL TONES to your radio. I did buy the BUTEL software also.... It just takes all of the hard work out of it.
You can alo go to radioreference.com and search for bradley county and find what freqs you want. I dont have them handy but will get them when I get back home.

3176. Re: Bradley Sheriff Tone Change

Yahoo group: chattradio
Date: 2009-02-27 17:12:11 UTC
From: radioscanner4fun
Topic: 3137 Message: 3176

Has Bradley county SO kicked the DTF units off the 155.535 freq? They seem to be using the MAC channel of the dog catcher channel?

3177. Re: [chattradio] Re: Bradley Sheriff Tone Change

Yahoo group: chattradio
Date: 2009-02-27 17:32:44 UTC
From: Rusty Bryant
Topic: 3137 Message: 3177

The mac channel is not the "dog catcher" channel. It's a multi agency channel and DTF along with our drug unit utilize the mac channel. Lots of different people use it.

Has Bradley county SO kicked the DTF units off the 155.535 freq? They
seem to be using the MAC channel of the dog catcher channel?

Bradley County has a dog catcher channel if your interested.
152.3150 205DPL with a digital input also.

So I take it wih all of the freq changes and tone changes there is NOT going to be a 800meg system that will tie in all other agencies? It seems that Bradley County want to be own there own. With all of the TVA DAmns, Nuculer power plants,ect ect of things in the TN Valley why not have it all tied in together???

Personally, I would MUCH rather have a solid, reliable VHF system like we have than to have an 800mhz system. Sure, an 800mhz P25 system would be sweet and would make us look cool, but the truth is, we would have to install so much infrastructure to make the system reliable it wouldnt be cost effective in my opinion.

As an officer, i would rather not hear "BONK" when I go to talk on my 800 radio in the middle of an incident. I would much rather hear the dispatcher saying she can barely copy. At least something would get through. I know even with our current system there are still some areas in the county that are like RF holes and nothing will penetrate, not even VHF.

Simply put, VHF is better for longer distances. 800Mhz would be great inside a municipality where you're in a lot of buildings and stuff like that because 800 is good for short distances but has great building-penetration capabilities.

but, i'll carry whatever they tell me to carry and talk on what ever they want me to talk on.

Yeah I totally agree. Especially with a RR subscription. Which software did you choose? I use Win95, Win96, and Win500 and love them.

Software is the way to go. I did purchase the Butel for my undiden 396. ANd with a RR subscription it is a breez... I dont think I could have programed it without the software. Now when I go out of town I go to RR and download each town and send it right to the scanner.I have used the Win95 before it was good also. Everyone Keep Scanning. I love to search and find new stuff..

County school buses use nextels as their radio communications. All county schools have nextels also. They work well and are private.

Eventually they may get radios though but it's a work in progress.

Good morning. I am not sure of which city frequency you are referring to but if you go to www.radioreference.com you may be able to find it as they list at times various city and county frequencies under the particular city or county you are looking for. Radioreference also has a forum that you can go onto and ask frequency questions as well as other questions pertaining to scanners and listening. I hope that this helps.

OHH some more top secret information huh

A top secret freq on public airwaves paid for by the taxpayers.
George Orwell would be proud.

It has many cons, when the tax payers are paying for it whether it be for the school systems, law enforcement, or what ever it is for. When radios work just fine. Specially for the school system, which as far as I can see. Has no need for privacy or increpted communications. When government starts making excuses to hide from its citizens, the citizens have lost.

3204. Cleveland city schools

Yahoo group: chattradio
Date: 2009-03-21 15:23:57 UTC
From: radioscanner4fun
Topic: 3204 Message: 3204

Radio Reference is showing a 72.100 freq for the schools. I have never saw this before. Has anyone ever heard any traffic on this site before?

3205. Re: Cleveland city schools

GPS enabled ankle monitors for chronically truant kids. If kid does not show up for school, SRO goes and gets kid and parent(s), brings them back to school to be soundly flogged.

Actually, it looks like it's a wireless clock network for Blythe-Bower Elementary. If you go to the FCC lookup page, the physical address for the license is that of Blythe-Bower. Here's the significant language used by the FCC:
90.257 - Transmit data to paging receivers located in building where transmitter is located. The transmitter complies with the technical requirements of 90.257b2. (Wireless Clock System)

Doubtful of anything exciting to monitor on this frequency!

3207. Channel 9 digital

Yahoo group: chattradio
Date: 2009-04-02 03:57:22 UTC
From: Richard L. Elliston
Topic: 3207 Message: 3207

Is channel 9 digital currently operating on something less than full power? I live about a mile south of Charleston. I'm getting excellent signal strength on all other Chattanooga digital TV channels, but channel 9 is a real problem. I'm hoping it's temporary.

3208. Re: [chattradio] Channel 9 digital

Yahoo group: chattradio
Date: 2009-04-02 04:46:48 UTC
From: Matthew Sadler
Topic: 3207 Message: 3208

When I was there Tuesday evening, I was having to reduce the power on
the digital because the VSWR kept creeping up. Not sure if we are
having antenna problems or if this was just temporary while rain was
in the area. I'll find out tomorrow (er, later on today).

3210. Frequencies for Dalton/Varnell/Cohutta GA

Yahoo group: chattradio
Date: 2009-05-15 12:17:15 UTC
From: TC
Topic: 3210 Message: 3210

Does anyone know where any frequencies (Police, fire, railroad, Ham Weather Net, etc..) can be found?

From: David H. Corbin
Topic: 3211 Message: 3212

Radio reference would be a good start. I monitor Dalton but not the railroad. Probably just try searching the common range.

From: Rusty Boling
Topic: 3210 Message: 3213

As far as weather nets, I think the 146.805 on Oglethorpe Mtn and then the 224.680 links into it from what I have heard on air. Hopefully that will help. I don't think I have ever heard any weather nets on any local Whitfield Co repeaters, but then again I am usually listening to local stuff or things to my West. Here is the link to what you need to look for: http://www.radioreference.com/apps/db/?inputs=1&ctid=537

Hope that helps,
Rusty

From: Gary Oakes
Topic: 3214 Message: 3214

Anyone had any luck tracking this with the Pro-96?
It does not seem to work with standard Motorola 9600 table but does read data when locked on a CC. Any help would be appreciated.

I cant find anything but forum reading also, I have heard the ems on there last nite.... Some very interesting reading. It seems thst alot of guys want to be private about their findings everything wants to be secret... Keep scanning!!!! Keep the info open ato us radio hobby guys. this is the most interesting hobby I have ever had.

It has been brought up on here before. but here is some of the info i have.

There is a Windows app out there called WinMDCD that decodes MDC1200.
Works well; I've tested it with Southern Adventist University's Campus
Safety as they have enabled MDC on their radios. Also played with it
on my Chicago trip earlier this year. Neat program.

3231. Tri-County trunked system off the air

Yahoo group: chattradio
Date: 2009-09-16 17:02:35 UTC
From: jim knight
Topic: 3231 Message: 3231

I had noticed this some time ago but forgotten to post it here. The Tri-County system no longer has a signal on any of the old control channels. I assume it is no longer in operation. A quick scan of the 800 MHz band did not find any control channels other than those that belong to other known systems.

This sounds like you don't have something set up right, because as far as I know this talkgroup does not exist. The lowest talkgroup number is 16432. What model scanner are you using? Some of the earlier scanners were prone to occasional erroneous talkgroup numbers being displayed, but I have not heard this complaint about the newer ones. Just in case there's something I don't know about, I'll monitor the system for unknowns today and report back if I find any.

Jim,

Far as I know it's set up properly. I didn't know
what the lowest talkgroup was but it sure looked strange.
Radio is a RS Pro 2096 (f1.0). Probably just a glitch. It is
called 'radio theory' after all. GGGG Appreciate the reply.

If you haven't heard it again, that's another indication that it was a glitch. I monitored for unknowns for quite a while and did not find any. Sometimes the talkgroup data is incomplete and causes a wrong number to be displayed, especially on older Uniden models. I guess in principle there's no reason it couldn't happen on others.

3236. UTC bomb threat last week

Yahoo group: chattradio
Date: 2009-10-29 14:20:55 UTC
From: jim knight
Topic: 3236 Message: 3236

I meant to post this last week when it happened but I got busy and forgot. It was last Wednesday Oct. 21. I heard the UTC police very busy evacuating students because of a bomb threat in the Engineering building. They also called for assistance from CPD and coordinated with them on Mutual aid 1. They blocked off Palmetto, Vine, Collins, and other streets in the area. I first heard the traffic around 1 PM and it went on until after 5 PM. Later on they mentioned that they had a photograph and were going to sweep the campus for a suspect. The strange thing about it all is that none of the local TV stations ever had a story about it, at least when I watched. I even heard someone say at one point, "The media is here, where do you want me to send them?" But then NOTHING ever showed up on the local TV news. I just checked the web sites of the big three and they don't have the story.
Here's a link to a Times-Free Press article:
http://www.timesfreepress.com/news/2009/oct/22/bomb-threat-disrupts-utc/

Questions for the group:
Did anyone else listen in on this?
How did this avoid getting on the TV news? I know their news departments monitor scanners, so how could they miss this one?

3237. Re: [chattradio] UTC bomb threat last week

Yahoo group: chattradio

> Did anyone else listen in on this?
NO.

> How did this avoid getting on the TV news? I know their news
> departments monitor scanners, so how could they miss this one?
The obvious answer is that they did not run the story. Press for this sort of thing tends to encourage copycats.

Bruce W.

Most media outlets won't run these types of stories. They don't want to give the caller the attention they seek.

Subject: [chattradio] UTC bomb threat last week

I meant to post this last week when it happened but I got busy and forgot. It was last Wednesday Oct. 21. I heard the UTC police very busy evacuating students because of a bomb threat in the Engineering building. They also called for assistance from CPD and coordinated with them on Mutual aid 1. They blocked off Palmetto, Vine, Collins, and other streets in the area. I first heard the traffic around 1 PM and it went on until after 5 PM. Later on they mentioned that they had a photograph and were going to sweep the campus for a suspect. The strange thing about it all is that none of the local TV stations ever had a story about it, at least when I watched. I even heard someone say at one point, "The media is here, where do you want me to send them?" But then NOTHING ever showed up on the local TV news. I just checked the web sites of the big three and they don't have the story.
Here's a link to a Times-Free Press article:
http://www.timesfreepress.com/news/2009/oct/22/bomb-threat-disrupts-utc/

Questions for the group:
Did anyone else listen in on this?
How did this avoid getting on the TV news? I know their news departments monitor scanners, so how could they miss this one?

Thanks, that makes sense. Somehow I didn't expect a media outlet to act responsibly. I wonder why?

3240. RE: [chattradio] UTC bomb threat last week

From: John P. Creel III
Topic: 3236 Message: 3240

They monitor the scanners very closely. Some stations even
have multiple scanners and antennas.

They don't however report on these events for the reason
previously mention ... giving the caller the attention they
seek. They don't want to be accused of creating panic or
exaggerating the story. Stories like this are run up the flag poll
thru upper managment before they make air, hit the web, or wind up in
print. While everyone in the media wants to see the event for
themselves smaller staff sizes these days often prompts phone calls
before crews are dispatched.

THEY DO OCCASIONALY MISS THINGS and they'd love to hear from
you as soon you hear it. They might even pay you for the tip IF it
results in a story they would have missed otherwise. They'll pay you
for the pictures, and sound if you're there, BUT you're there as a
concerned citizen only! Your presence does not convey any authority
on their behalf! The risk you take is your own!!

Hear it, call'em .... make a friend in the news business, but
don't take unnecessary risk thinking you'll be part of the story.

(I worked in Chatt. TV News for 31 years.)

3241. Chattanooga trunked system rebanding question

Yahoo group: chattradio
Date: 2009-11-11 02:13:58 UTC
From: ke4vrm
Topic: 3241 Message: 3241

I have 2 scanners (a pro-2096 & a bc245xlt) and have been hearing about the rebanding issues. I have entered all the new frequencies listed on radioreference.com's database. Both radios took all the freq's and seem to be working fine. But I am wondering if I need to have some kind of update for these radios to track the system. I am not completely clear on what radios will accept the rebanding freq's. I have heard the 2096 will and the 245 won't. Is this correct? The 245 seems to be working fine. Is this possible? Any help would be greatly appreciated. Thanks!

Jay

The 2096 will require software. I used Win96 for my Pro96. Dunno about the Uniden. You must enable the "800 rebanded" button in the software. This will get your correct steps.

If you just program the simulcast site, you do not need to do anything. I have verified that even first generation trunktrackers such as the BC895 still work. This is because the simulcast system does not use any of the new "rebanded" frequencies. All trunktracker scanners have a formula that they use to calculate the frequency to tune to. They have to have a formula because the trunking system information tells the radio what channel to tune to and the radio has to translate the channel number to a frequency through a formula. Rebanding changes part of the formula so that certain channel numbers now point to different frequencies than they used to. If the system you are listening to does not use any of the new frequencies, you don't need to change anything to track it. This is the case for the simulcast system which carries all of the traffic. I'm not sure about the Brock Road or Ringgold sites. If you are using them you may have to do the rebanding. For my purposes the simulcast site works perfectly.

I should have also noted that the BC245 will work fine with all the analog talkgroups but you will have to lock out the digital ones to avoid hearing a bunch of noise when they key up.

If you are buying a new scanner, you have two basic choices - the GRE PSR-500 (or its Radio Shack equivalent which I don't remember the model number for offhand) and the Uniden BCD-396XT. There are several older models available used if you want to go that direction. You might check the Grove Enterprises web site www.grovent.com or www.radioreference.com to see if they have comparisons or reviews of the older scanners. Also maybe eham.net.

Both the Uniden and GRE models offer lots of good features. The way the scanners are organized is quite different so it's mostly a matter of preference. I have a PSR-500 and like it a lot and it does everything I want it to. I also have a Uniden BCD-996XT (the base version of the 396XT) and it's great too.

Here's a short summary of the "philosophical" differences between Uniden and GRE. Let's assume for example that you want to listen only to EMS related traffic. The trunked system has several talkgroups related to EMS and there are also several conventional frequencies. Uniden organizes things by "systems". A system has to be either trunked or conventional. A trunked system consists of frequencies and talkgroups, and a conventional system consists of just frequencies. You can enable and disable the systems with quick keys. So to listen to all the EMS traffic you would program two systems, one trunked and one conventional, and enable them both with the same quick key. But you would also need to program the other talkgroups in the trunked system and keep them locked out by assigning them to group quick keys and turning the non-EMS related group quick keys off. GRE organizes things by "scan lists" which can contain both trunked system talkgroups and conventional frequencies, as well as search ranges if desired. So to listen only to EMS traffic you could program the conventional frequencies, the trunked system frequencies and the talkgroups you are interested in, and assign all of them to one scan list. You would not have to program any other talkgroups that you didn't want to hear. Frequencies and talkgroups can be assigned to more than one scan list.

The PSR-500 is limited to 20 normal scan lists, a "favorites" list and a "Skywarn" list for a total of 22. But if you scan either the favorites or skywarn list you can't scan the other 20 along with them. With the Uniden you can scan the systems in any combination you want by locking out the ones you don't want to hear.

Sorry if this explanation is confusing. I hope it helps. I suggest you download the user manuals for any scanners you are considering and look through them to see which one you like better. There's not that much difference in price between the PSR-500 and the BCD-396T, so it really comes down to which one you think would be a better fit to the way you like to use a scanner.

Finally, definitely get programming software for whichever scanner you buy. That makes programming a lot quicker. If you have a premium

subscription to radioreference.com, you can download information directly into the programming software which really saves time getting it set up initially. There's a program called freescan which is FREE and works with the Unidens. I don't know for sure if there is a free program for the PSR-500 but there are several very good ones that cost $35. The one I use is psredit500.

I have a Pro-96 sitting here collecting dust. Works great, but there are a few limitations with the system. Will not trunk 700mhz. This would not be a problem for the agencies you mentioned. The Bradley county site is 700mhz. I use it for Catoosa and Walker. Let me know if it is one you would be interested in.

Thanks for that great explanation there Jim. I am also in the market for a new digital scanner & have spent the last several months wrestling internally as to which unit I wanted to go with. While this doesn't necessarily narrow things down for me it certainly gives me some good reference points.

I'm not familiar with the Uniden models, but have programmed and played with the PSR-500 portable and the RS model mobile and I like them because they operate very much like the radios you have at the fire dept. I have software and can program as much stuff as you want for $25.00 if you get the PSR-500 or RS model.

Jordan.

Thanks Jordan. I just bought the Pro 106 Handheld yesterday. I do have the software,and cable. Trying to sift through the manual today. As usual I am somewhat lost today but hoping to mess with it some today. It looks like I have some work to do to get the scan list set up. I went ahead and joined Radio Reference and thinking I can save some time on programming it manually if I can get the files imported to the scanner. Got a few bells and whistles to figure out. Anyone who has a Pro 106 on here I would appreciate any tips.

Can you program a Pro 106?

3268. Would the Rebanding Issue Be Resolved on the Pro 106?

Yahoo group: chattradio

From: sdtnvol42
Topic: 3268 Message: 3268

Since I haven't owned a digital scanner before and I am trying to program this new radio. Does the Pro 106 Radio Shack Version already have the Re-Banding Issues resolved on the radio out of the box? I saw several post about some of the Radio's that had problems with Re-banded Freq's... I am assuming that the Pro 106 is set up with the fix if I download the Radio Reference imports for the scanner?

I should be able to program that one. If its the P25 scanner from RS, then yes. I have the Butel software which is better than the stuff that comes with the radio(at least from what I hear).

3271. Ok Making Progress But Have a Question

Yahoo group: chattradio
Date: 2011-01-18 15:18:00 UTC
From: sdtnvol42
Topic: 3271 Message: 3271

Ok I am making progress but have some PRO-106 questions for the Chattanooga Trunking Channels. I went to Radio Reference and uploaded the traditional Chattanooga Trunking Channels. Later I noticed a post that had the TVR channels which changed Id numbers. I think now I have both the old and new Chattanooga HC systems plus the simulcast. Does this cause the Radio to conflict. Is it better that I just start over and load only the TVR entries. Or does it matter. I see where the scanner is trying to go to CPD Adam Channel on Simulcast and also trying to load up the TVR CPD Adam Channel. I have come to the conclusion that maybe I should have only uploaded one set of trunking which is the new TVR and not the original listed Chattanooga?? If anyone understands what I just said Please Advise or Help Thanks

Well, the way they have it setup is the P25 system has all the talkgroups of the chattanooga system. Now only a few channels are linked between both systems. Some officers are on the digital and others on the analog. You can tell which is which really. As far as the scanner, I don't know what its doing.

Hey guys.....I haven't been participating in
Chattradio for some time now. (family illness) I have been catching
up on postings and noticed questions about
Walker and Catoosa Freqs. In case any one still needs
to know. (http://www.radioreference.com/apps/db/?sid=6355)
has all the id's. I have them setup in PRO197 and working
great. Sorry if this is old news...Maybe it will help someone.

cc for Ga. 851.17500---- Thanks for reading.....Fred

3274. Chickamauga Battlefield NPS Question

Yahoo group: chattradio
Date: 2011-02-01 02:48:30 UTC
From: Stevie D KG4TOS
Topic: 3274 Message: 3274

On the old system the NPS was listed 23056 and was on Chattanooga listing. On the New Tenn Valley system I do not see NPS listed. Does anyone know the information on programming NPS or who dispatches for them now.

23056 5a1 A NPS CCNMP Chickamauga & Chattanooga National Military Park Federal

3276. Garbled Sound

Yahoo group: chattradio
Date: 2011-02-03 19:56:00 UTC
From: Stevie D KG4TOS
Topic: 3276 Message: 3276

One thing I have noticed since I have programmed my Pro-106 and have been listening to TN Valley Radio System is that it is at times Garbled and at other times Clear. I tried a 800mz rubber duck to replace the standard one. Sometimes the transmissions are clear at other times it seems Garbled and Choppy. I was wondering if it is a Radio Setting or if it is something with the Digital system. It seems when the Dispatcher is talking I can hear it fine then it goes to Garbled. Other times it is very clear and appears normal. I did load the radio using the Radio Reference programs. Any thoughts?

I have struggled with this same problem. What I have come up with is this: When I get the "garble" is when I hit on the Chatt simulcast site. This happens with my 106 with 800 ducky and 197 with external attic mounted ant. I can watch the decode and I get 30-90% all over the board. Both the N Ga sites are a constant 99%. I monitor Catoosa most of the time, so, I just deleted the simulcast site from the list. Kinna stinks though cause I can't monitor Chatt and Hamilton co. If I just use the N Ga sites I get crystal clear comms. I would love to have some suggestions too.

Yeah it is as if the Simulcast and Trunking Channels are conflicting with each other. I programmed the Simulcast Channels using Radio Reference list and all of the TVRC Channels. I have been wondering if somehow it causes the scanner to try to monitor the Simulcast and Trunking Channels at the same time. I wonder if Locking the Simulcast Channels out will work. I may try that David.

I don’t have a digital scanner yet but I am guessing it may not be a problem on your end. I’ve got a 246t and her it when monitoring the older system. I’ve also heard officers complain over the air about the garbled sound many times and I’ve had some friends who are cops say that the changes they are making out right sucks.

In programing either one of these scanners I have all the
Chattanooga-N.Ga. areas programed manualy and they work fine.
But I have to put each one in Virtual systems.
Is there any way to put more than one TSYS in one set
of listings? When I try to put an additional TSYS in
it changes both TSYS to same one. I hope this is not
too confusing.....but I chose to do it manualy since I
have lots of time and my mind needs the exersize. Any help
would appreciated.....Fred White

3284. rebanding pro-2096/pro96

Yahoo group: chattradio
Date: 2011-12-13 01:01:07 UTC
From: wjay62
Topic: 3284 Message: 3284

I have a pro-2096 and my buddy has a pro-96. We are trying to figure out how to reband them to pick up the new TVRTS system. He has WIN96 but can't figure out how to change the table to make it accept the 700Mhz. freq's. Can both these radios be rebanded? Is there anyone that has done this that can help us with this. Even if there was someone out there that would do it for us, we would be more than happy to pay for it. Thanks for any help that you can provide!

In Win96 check the 800 rebanded box. This will get you going on the 800 MHz. Neither of the radios will track the 700mhz though. My 96 did a poor job on this system, I retired it and currently use a 106 and 197. They do a fine job.

Using Win96, check the box for extended frequency coverage, which will allow you to receive the 700 mHz frequencies. Choose a clear bank, set it up as a conventional bank (NOT trunked) and program in all of the frequencies for the TVRTS sites you want to monitor. Lock out all active control and/or data channels. Turn off delay for all channels in the bank. This is, of course, and old trick that we all used prior to the arrival of trunk tracking scanners back in the mid-nineties. Granted, it does not trunk track, and if you've got multiple conversations in progress, such as in the Chattanooga area, it might get a bit confusing. If this happens, try hitting PAUSE as soon as you hear an interesting conversation. I think you'll find that in the TVRTS system, most replies will come on the exact same frequency. I've got mine set up this way to receive Bradley County traffic off the North Bradley and Oswald Dome sites. It works just fine, because you seldom have more than conversation underway at the same time. The audio I get using this procedure is actually better than I get from my Pro 106.
Obviously, it's not a perfect fix, but it does beat silence.

3290. "New" talkgroups on Hamilton County system

Yahoo group: chattradio
Date: 2012-10-19 20:22:39 UTC
From: Jim Knight
Topic: 3290 Message: 3290

I call these new because they are not in my database and not listed on radioreference.com. I haven't listened a lot recently but today there was traffic on 33744 and 33712. The traffic on 33712 was too short to get much information, but on 33744 there was discussion of a problem with a toilet in the Omni Building. It seems likely that 33744 is the maintenance department at Chattanooga State. Maybe 33712 is something out there also since the brief exchange on there was shortly after the discussion on 33744. Anyone have further information?

3311. EPB now using proprietary digital format?

Yahoo group: chattradio
Date: 2013-02-27 17:10:07 UTC
From: Jim Knight
Topic: 3311 Message: 3311

I enabled a bank on my scanner yesterday that I had not enabled recently and was surprised to hear digital hash on several of the EPB frequencies. In particular 451.05 which is the troubleshooter frequency had many brief bursts and several extended ones. I changed the channel audio mode to digital and then heard nothing, which indicates that they are using some digital format other than P25. This is a big disappointment. When my power goes off I have been able to tune into 451.05 and find out when they are working in my area. I even know the pole number of the primary disconnect that energizes the lines out my way. When I hear them going to that pole it's pretty certain my power will be back on soon.
Just wondering if anybody in the group has any inside information as to why they went to this new format. It just seems wrong for a public agency to lock the pubilc that they serve out from listening to their operations.

Topic: 3311 Message: 3312

That is probably mototrbo. That's what they were installing before the first for narrowband.

From my Android phone on T-Mobile. The first nationwide 4G network.

From: Glenn Mitchell
Topic: 3346 Message: 3346

It's a light week but it's better than nothing. Although it looks like new land mobile licenses were not granted during the shutdown, there were about 167 new licenses (WQSJ742 to WQSK213) issued on the cutoff week. Also, around 730 non-new land mobile licenses had grants during the shutdown. A lot of this is automated. Most likely a few hundred of those were license modifications. I'm going to look into pulling the "lost" grants from the full database but it may be too much of a pain to do. I'll let you know.

From: Glenn Mitchell
Topic: 3314 Message: 3368

I added the antenna data from the license. It still needs to be cleaned
up a little. HTT is height to tip and HAAT is height above average terrain.

On some there is now a link that will take you to the transaction log
for modified licenses. This will tell you what was actually modified.
I found a couple of links that were wrong but I should get it fixed by
next week.

Common digital emission codes are now in bold. Emission codes associated with P25 Phase II now say "(P25 Phase II)". This is only data off of the license, it does not mean that a license will be Phase II next week. There are several sources of emission codes on the web including this one from our friends at Radio Reference:
http://wiki.radioreference.com/index.php/Emission_Designator

Have a good weekend!

Hello, everyone. Comcast is discontinuing personal web pages and all files will be deleted on October 8th. If you want any files from the archives, download them soon:
http://home.comcast.net/~gmitch86/archive/archive.htm

I put up another site here:
http://fccgrants.x10host.com/quick.htm
Since this is a free web hosting site, I will probably only put up a few weeks of past grants. I am also going to put a backup site here:
http://fccgrants.neocities.org/quick.htm

If you have a website with Comcast, you are going to have to figure out what to do with it.

The weekly FCC grants and new applications are ready:
http://home.comcast.net/~gmitch86/quick.htm

Past weeks are here:
http://home.comcast.net/~gmitch86/archive/archive.htm

Or Google "Quick Scanner Links"
